- Screen 4.2.10 — AI Channel Optimization & Intelligence Center

Board 2 — Final Screen Register

Sales Channel Management

Board 1 — Sales Channel Configuration & Distribution Rules

The screenshot displays the TICVAI Sales Channel Management interface, which is organized into several sections:

- 4.1.1 Sales Channel Command Center:** A dashboard showing a summary of sales channels. It includes metrics for Total Channels (36), Active Channels (28), Draft Channels (4), Channels With Errors (3), and Scheduled Activations (2). It also shows a list of channels with columns for Channel ID, Channel Name, Type, Brand, Status, and Last Updated.
- 4.1.2 Channel Profile Configuration:** A screen for configuring a specific channel. It includes sections for Basic Information (Channel Name, Channel Code, Channel Type), Operational Scope (Brand, Vehicle / Store, Country, Channel Type), and Customer Facing Status (Dubai Area Self-Service Kiosk).
- 4.1.3 Product & Catalogue Assignment:** A screen for assigning products to a channel. It includes a search bar, a list of available products, and a table showing assigned products with columns for Product, Type, Brand, Status, and Assigned to Channel (SKU).
- 4.1.4 Channel Pricing & Commercial Profile Assignment:** A screen for assigning pricing and commercial profiles to a channel. It includes a table showing assigned pricing profiles with columns for Product / Category, Venue, Channel Profile, Currency, Effective From, To, and Channel.
- 4.1.5 Inventory, Capacity & Channel Allocation:** A screen for managing inventory and capacity. It includes a table showing inventory levels with columns for Channel, Allocation Type, Amount, and Status.
- 4.1.6 Sales Schedule & Availability Windows:** A screen for defining sales schedules and availability windows. It includes a table showing sales windows with columns for Channel, Sales Window, Start Time, End Time, and Status.
- 4.1.7 Customer & Eligibility Rules by Channel:** A screen for defining customer eligibility rules. It includes a table showing rules with columns for Rule ID, Rule Name, Rule Type, and Status.
- 4.1.8 Channel Sales Rules, Limits & Restrictions:** A screen for defining sales rules, limits, and restrictions. It includes a table showing rules with columns for Rule ID, Rule Name, Rule Type, and Status.
- 4.1.9 Fees, Payment & Fulfillment Configuration:** A screen for configuring fees, payment methods, and fulfillment methods. It includes a table showing configurations with columns for Fee, Payment Method, and Fulfillment Method.
- 4.1.10 Channel Publication, Readiness & AI Validation:** A screen for publishing channels and validating their readiness. It includes a table showing channels with columns for Channel ID, Channel Name, Status, and Readiness Score.

Board Objective

Board 1 establishes the central backend configuration layer for **all sales channels through which TICVAI products can be distributed and sold.**

The objective is to allow an administrator to answer:

What is the channel? → Where does it operate? → What can it sell? → Which prices does it use? → How much inventory/capacity does it receive? → When can it sell? → Who can buy? → What restrictions apply? → What commercial rules apply? → Is the channel ready to go live?

This area is particularly important because channels such as **B2C, POS, kiosk, call center, B2B, reseller, OTA, mobile app and API** should not independently configure product logic. Instead, they should consume governed product, pricing, capacity and eligibility configurations through Sales Channel Management.

Screen 4.1.1 — Sales Channel Command Center

Purpose

Provide administrators with one centralized view of every TICVAI sales channel and its current operational/configuration status.

Channel Types

Support channels such as:

- B2C Web
- B2C Mobile App

- POS
- Mobile POS
- Flying POS
- Kiosk
- Call Center
- B2B Portal
- Reseller
- OTA
- API
- Partner Portal
- Marketplace
- Third-Party Channel
- Custom Channel

Dashboard KPIs

Display:

- Total Channels
- Active Channels
- Inactive Channels
- Channels in Draft
- Channels With Errors
- Products Distributed
- Channels With Capacity Alerts
- Channels With Pricing Issues
- Scheduled Activations
- Scheduled Deactivations

Channel Directory

Each record should display:

- Channel ID
- Channel Name
- Channel Type
- Brand
- Venue/Scope
- Products
- Currency
- Status
- Publication Status
- Integration Status
- Last Updated
- Owner

Channel Status

Suggested lifecycle:

Draft → Configuration → Validation → Approved → Scheduled → Active → Suspended → Disabled → Archived

Actions

Authorized users can:

- Create Channel
- Edit
- Duplicate
- Activate
- Suspend
- Disable
- View Products
- View Capacity
- Validate
- Schedule
- Open Analytics

AI Capability

AI should flag configuration problems.

Example:

Channel Readiness Alert:

“Dubai Arena Kiosk” has 14 products assigned but three products do not have a valid kiosk price profile.

Acceptance Condition

An administrator can see every configured sales channel, its status, scope, product coverage and configuration issues from one central workspace.

Screen 4.1.2 — Channel Creation & Profile Configuration

Purpose

Create and define a sales channel before products and commercial rules are assigned.

Basic Configuration

Configure:

- Channel Name
- Channel Code
- Channel Type
- Internal Description
- Customer-Facing Name
- Tenant
- Brand
- Business Unit
- Country
- Market
- Currency

- Time Zone
- Owner
- Responsible Department

Channel Type

Selecting the type should determine which configuration capabilities are applicable.

For example:

POS

may require:

- Venue
- Workstation groups
- Cashier access

B2C

may require:

- Webstore
- Domain/brand
- Digital customer journey

OTA

may require:

- Partner
- API connection
- Allocation rules

Operational Scope

Assign channel to:

- Global
- Country
- Region
- Venue
- Attraction
- Event
- Location
- Selected business unit

Channel Ownership

Assign:

- Commercial Owner
- Operational Owner
- Technical Owner
- Finance Owner

Acceptance Condition

An authorized administrator can create a new channel with a unique identity, operational scope and ownership without technical development.

Screen 4.1.3 — Product & Catalogue Assignment

Purpose

Control exactly **which products are available through each sales channel.**

Assignment Methods

Administrators can assign:

- Individual product
- Product family
- Product category
- Event
- Attraction
- Venue catalogue
- Product collection
- Entire approved catalogue

Product Assignment Table

Display:

- Product
- Product Type
- Venue
- Status
- Validity
- Channel Status
- Pricing Status
- Capacity Status
- Effective From
- Effective To

Bulk Actions

Support:

- Assign Products
- Remove Products
- Enable
- Disable
- Set Effective Dates
- Copy Assignment
- Import Assignment

Inheritance

Allow:

Global Channel Catalogue

↓

Venue Catalogue

↓

Channel-Specific Overrides

For example:

B2C may inherit all standard admission products but exclude corporate ticket types.

Validation

TICVAI should prevent or warn against publishing:

- Draft products
- Retired products
- Products without valid pricing
- Products without required entitlement
- Products outside validity
- Products unavailable for the channel

Important Architecture

Product definition remains owned by **Product Catalogue**.

This screen only determines:

Can this channel sell this product?

Acceptance Condition

Administrators can determine precisely which approved products each channel is authorized to distribute without duplicating the product configuration itself.

Screen 4.1.4 — Channel Pricing & Commercial Profile Assignment

Purpose

Determine which pricing configuration a channel consumes.

Pricing Associations

Administrators can assign:

- Standard Price List
- Channel Price List
- B2B Rate
- Reseller Rate
- OTA Rate
- POS Price
- Promotional Price Profile
- Dynamic Pricing Profile

Configuration

For each assignment:

- Price Profile
- Currency
- Effective From
- Effective To
- Venue

- Event
- Product
- Customer Segment
- Priority
- Override Permission

Example

1-Day Admission

Channel	Pricing Profile
B2C	Retail AED
POS	Retail AED
Kiosk	Retail AED
B2B	Trade AED
OTA	OTA Contract Rate

Price Override Governance

Configure whether a channel may:

- Use fixed price only
- Apply promotion
- Apply discount
- Override price
- Require approval for override
- Use dynamic pricing

Price Validation

Identify:

- Missing price
- Expired price
- Currency mismatch
- Conflicting profiles
- Invalid override

Architecture

The actual price calculation belongs to the **TICVAI Pricing Engine**.

Sales Channel Management determines which approved pricing profile is consumed.

Acceptance Condition

Every active product/channel combination has an applicable governed pricing source before sales are permitted.

Screen 4.1.5 — Inventory, Capacity & Channel Allocation

Purpose

Control how much product inventory or event capacity is available to each sales channel.

Allocation Types

Support:

Shared Pool

All selected channels consume from the same capacity.

Dedicated Allocation

A fixed quantity is reserved for a channel.

Percentage Allocation

Example: OTA receives 15%.

Dynamic Allocation

Capacity changes based on configured rules.

Configuration

Define:

- Product/Event
- Capacity Pool
- Channel
- Allocation
- Minimum
- Maximum
- Release Threshold
- Release Date
- Replenishment Rule
- Oversell Permission
- Waitlist behavior where applicable

Example

Event Capacity: **10,000**

- B2C Shared Pool: 6,000
- POS: 1,000
- B2B: 1,500
- OTA: 1,000
- Operational Hold: 500

Release Rules

Example:

If OTA has more than 300 unsold tickets 48 hours before the event, return excess capacity to the shared pool.

Live Utilization

Display:

- Allocated
- Sold

- Held
- Remaining
- Utilization %
- Released
- Returned

AI Capability

AI can recommend reallocation based on channel performance and predicted demand.

Example:

OTA has used only 31% of its allocation while B2C is forecast to sell out. Recommend releasing 420 units to the shared pool.

Acceptance Condition

TICVAI can enforce channel-level capacity without allowing combined channel sales to exceed the underlying approved inventory/capacity.

Screen 4.1.6 — Channel Sales Schedule & Availability Windows

Purpose

Control **when each channel is permitted to sell.**

Schedule Configuration

Configure:

- Sales Start Date
- Sales Start Time
- Sales End Date
- Sales End Time
- Time Zone
- Days of Week
- Hours of Operation
- Blackout Dates
- Event-relative windows

Event-Relative Rules

Examples:

- B2C opens 90 days before event.
- B2B opens 120 days before event.
- OTA closes 4 hours before event.
- POS remains available until event end.
- Kiosk opens 2 hours before admission.

Channel-Specific Scheduling

The same product can have different sales windows by channel.

Calendar View

Display:

- Active selling periods

- Scheduled openings
- Scheduled closures
- Blackouts
- Conflicts
- Event dates

Automated Actions

At the configured time TICVAI can:

- Open sales
- Close sales
- Suspend availability
- Release allocation
- Change applicable rule

AI Capability

AI can detect unusual schedule configurations.

Example:

OTA sales close after the event admission window has already ended.

Acceptance Condition

Every channel can have independently governed selling windows without modifying the underlying product validity.

Screen 4.1.7 — Customer & Eligibility Rules by Channel

Purpose

Determine **who is allowed to purchase through a particular channel.**

Eligibility Dimensions

Rules may use:

- Customer Type
- Membership
- Loyalty Tier
- Country
- Residency
- Age
- Corporate Account
- Partner
- Customer Segment
- Promo Eligibility
- Authentication Status
- Purchase History
- Sales Territory

Example

UAE Resident Offer

Available:

- B2C
- POS

Eligibility:**UAE Residents Only****Not available:**

- OTA
- International Reseller

B2B Example**Product may only be available if:**

Customer Account Type = Approved Travel Agent

Authentication Rules**Configure:**

- Guest allowed
- Login required
- Membership required
- Corporate account required
- Identity verification required

Rule Testing**Provide a test workspace:**

Customer + Product + Channel → Eligible / Not Eligible

with explanation.

AI Capability

AI can detect contradictory channel/customer eligibility rules.

Acceptance Condition

TICVAI evaluates channel-specific customer eligibility before allowing a product to be purchased.

Screen 4.1.8 — Channel Sales Rules, Limits & Restrictions

Purpose

Configure operational restrictions that apply specifically to a sales channel.

Sales Limits**Configure:**

- Minimum Quantity
- Maximum Quantity
- Maximum Per Transaction
- Maximum Per Customer
- Maximum Per Day
- Maximum Per Event
- Maximum Per Product

Channel Restrictions

Examples:

- No refunds through OTA
- No cash payment through B2C
- No complimentary tickets through kiosk
- No manual discount through reseller
- No same-day sales through selected B2B channel
- No seat changes after purchase

Transaction Rules

Configure:

- Reservation permitted
- Hold permitted
- Payment link permitted
- Partial payment permitted
- Split payment permitted
- Discount permitted
- Promo code permitted
- Upgrade permitted
- Exchange permitted
- Reschedule permitted

Channel Overrides

Where authorized, allow a channel to override a general product rule.

Such overrides must be:

- Permission-controlled
- Visible
- Effective-dated
- Audited

Rule Priority

Suggested hierarchy:

Platform Rule → Product Rule → Channel Rule → Contract/Partner Rule

with controlled override governance.

Acceptance Condition

Administrators can enforce channel-specific operational and transaction restrictions without changing the master product definition.

Screen 4.1.9 — Channel Fees, Payment & Fulfillment Configuration

Purpose

Define the commercial and fulfillment behavior associated with each channel.

Fee Associations

Assign applicable:

- Booking Fee
- Transaction Fee
- Channel Fee
- Service Fee
- Delivery Fee
- Payment Fee

Actual fee calculations remain owned by the **Pricing/Fee Engine**.

Payment Methods**Configure which approved payment methods the channel may expose:**

- Credit/Debit Card
- Cash
- Digital Wallet
- Payment Link
- Account Credit
- B2B Credit
- Other configured methods

Fulfillment Methods**Configure:**

- Digital Ticket
- Email
- Mobile App
- Apple/Google Wallet
- Print at Home
- POS Print
- Kiosk Print
- RFID
- NFC
- Wristband
- Collection

Example**B2C**

- Card
- Wallet
- Digital Ticket
- Email
- Mobile Wallet

POS

- Cash
- Card
- Printed Ticket

- RFID

B2B

- Account Credit
- Voucher
- API Ticket Delivery

Validation

TICVAI should identify incompatible combinations.

Example:

RFID fulfillment selected, but no RFID media profile is assigned to this venue/channel.

Acceptance Condition

Each channel exposes only approved payment, fee and fulfillment methods supported by its operational configuration.

Screen 4.1.10 — Channel Publication, Readiness & AI Validation

Purpose

Perform final validation before a sales channel or channel/product configuration becomes commercially active.

Readiness Checklist

Validate:

Channel Profile

- Complete

Products

- Assigned

Pricing

- Valid

Capacity

- Available

Schedule

- Valid

Eligibility

- Configured

Sales Rules

- Valid

Payment

- Available

Fulfillment

- Available

Integration

- Ready where required

Readiness Score

Example:**Channel Readiness: 92%**

- Product: 100%
- Pricing: 100%
- Capacity: 95%
- Schedule: 100%
- Eligibility: 90%
- Payment: 100%
- Fulfillment: 80%
- Integration: 75%

Issue Severity**Classify:**

- Critical
- High
- Medium
- Low
- Recommendation

AI Validation**AI should identify configuration anomalies such as:****Potential commercial conflict:**

B2B price is AED 140 while the public promotional B2C price is AED 125 during the same period.

Or:**Capacity Risk:**

Channel allocations total 11,500 against an admission capacity of 10,000.

Publication Actions**Authorized users can:**

- Validate
- Preview
- Submit for Approval
- Schedule Activation
- Activate
- Return for Changes
- Suspend

Preview**Allow administrators to preview the effective configuration as:**

Product → Channel → Customer → Price → Capacity → Payment → Fulfillment

before activation.

Governance

Critical validation failures should block publication.

Warnings may be overridden only with appropriate permission and a mandatory reason.

Acceptance Condition

No sales channel becomes operational until its required product, pricing, capacity, schedule, payment, fulfillment and governance dependencies have passed configured readiness validation.

Board 1 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
4.1.1	Sales Channel Command Center	Channel portfolio & health
4.1.2	Channel Creation & Profile Configuration	Channel master setup
4.1.3	Product & Catalogue Assignment	What the channel can sell
4.1.4	Channel Pricing & Commercial Profile Assignment	Which pricing the channel consumes
4.1.5	Inventory, Capacity & Channel Allocation	Channel inventory/capacity
4.1.6	Channel Sales Schedule & Availability Windows	When the channel can sell
4.1.7	Customer & Eligibility Rules by Channel	Who can buy
4.1.8	Channel Sales Rules, Limits & Restrictions	Transaction restrictions
4.1.9	Channel Fees, Payment & Fulfillment Configuration	How sale/payment/delivery works
4.1.10	Channel Publication, Readiness & AI Validation	Go-live validation

Board 1 Architecture

The configuration flow should be very clear in the eventual UI:

Create Channel

- Assign Products
- Assign Pricing
- Allocate Capacity
- Set Sales Window
- Define Customer Eligibility
- Configure Sales Rules
- Configure Payment/Fulfillment
- Validate
- Publish

Boundary with Board 2

Board 1 answers:

“How should a sales channel be configured?”

Board 2 will answer:

“Once the channel is live, how do we connect it, synchronize it, monitor it, troubleshoot it, govern it and optimize its performance with AI?”

That means Board 2 will focus on **Channel Operations, Integrations, Synchronization & AI Intelligence**, without repeating the configuration screens above.

Board 2 — Channel Operations, Integration & AI Intelligence

10 Backend Screens

Board Objective

Board 2 manages the **live operational layer** of TICVAI's sales-channel ecosystem after channels have been configured and activated in Board 1.

Board 1 answered:

How should each sales channel be configured?

Board 2 answers:

Once channels are live, how does TICVAI connect, synchronize, monitor, troubleshoot, govern and optimize them?

The operational flow is:

Connect → Synchronize → Monitor → Manage Availability → Reallocate → Handle Exceptions → Measure Performance → Audit → Govern → AI Optimize

A key architectural principle is that TICVAI should have **one central Channel Management layer** rather than each B2C, POS, OTA, reseller, kiosk or API integration independently managing availability and synchronization.

Screen 4.2.1 — Channel Operations Command Center

Purpose

Provide a real-time operational view of all active TICVAI sales channels.

KPI Dashboard

Display:

- Active Channels
- Connected Channels
- Degraded Channels
- Offline Channels
- Transactions Today
- Gross Sales
- Products Available
- Synchronization Errors
- Capacity Alerts
- Pricing Errors
- Failed Transactions
- Open Operational Incidents

Channel Health Table**Each channel should display:**

- Channel
- Type
- Venue/Scope
- Connection Status
- Last Sync
- Products
- Transactions
- Sales Value
- Inventory Status
- Pricing Status
- Error Count
- Health Score

Health Status**Use:**

Healthy / Warning / Degraded / Critical / Offline / Maintenance

Live Activity**Show important events such as:**

OTA-TiqTrip inventory synchronized — 10:41

Dubai Arena Kiosk 07 disconnected — 10:39

B2B Partner API returned pricing error — 10:37

Actions**Authorized users can:**

- Open Channel
- Force Sync
- Pause Channel
- Resume Channel

- Open Incident
- View Logs
- View Transactions
- View Performance

AI Capability

AI should prioritize operational problems by business impact rather than simply displaying technical errors.

Example:

Critical — B2C Web

Inventory synchronization failed for the sold-out Final event. Approximately AED 420K of active demand may be affected.

Acceptance Condition

Operations teams can determine the health, commercial activity and current issues of every active sales channel from one central workspace.

Screen 4.2.2 — Channel Connection & Integration Manager

Purpose

Configure and manage the technical connection between TICVAI and external or internal sales channels.

Connection Types

Support:

- TICVAI Native
- REST API
- Webhook
- OTA Adapter
- Reseller API
- Partner API
- Middleware
- File/SFTP where required
- Custom Connector

Connection Profile

Configure/reference:

- Connector Name
- Channel
- Partner
- Environment
- Endpoint
- API Version
- Authentication Type
- Credentials reference
- Certificate

- Timeout
- Retry Policy
- Rate Limit
- IP Restrictions
- Connection Status

Security

Support secure authentication patterns such as:

- OAuth
- API Key
- Client Credentials
- Certificates
- Signed Requests

Secrets must not be exposed in normal administrative screens.

Connection Testing

Provide:

- Test Authentication
- Test Connectivity
- Test Product
- Test Price
- Test Availability
- Test Order
- Test Cancellation where supported

Environment Management

Allow distinct configurations for:

Sandbox / UAT / Production

Important Boundary

This screen manages **channel connectivity**.

It should not recreate TICVAI's full Developer Portal/API Management functionality.

Acceptance Condition

Authorized technical administrators can establish, test and monitor channel connections without modifying core TICVAI application code for supported connector types.

Screen 4.2.3 — Product, Price & Availability Synchronization

Purpose

Control how TICVAI distributes commercial information to connected channels and receives supported updates.

Synchronization Domains

Manage:

- Product
- Product Description
- Schedule

- Availability
- Capacity
- Price
- Tax
- Fees
- Media
- Restrictions
- Sales Status

Synchronization Direction

Support as appropriate:

TICVAI → Channel

Channel → TICVAI

Bidirectional

The direction must be controlled by integration type and ownership rules.

Sync Frequency

Configure:

- Real Time
- Near Real Time
- Scheduled
- Manual
- Event Triggered

Sync Dashboard

Display:

- Last Successful Sync
- Next Sync
- Records Processed
- Successful
- Failed
- Pending
- Warning
- Duration

Difference Detection

Example:

TICVAI Price: AED 250

OTA Price: AED 240

Status:

Mismatch

Administrators can investigate the source and applicable rule.

Actions

- Sync Now
- Retry Failed

- Compare
- Reprocess
- Pause Sync
- Resume
- Export Error

AI Capability

AI can group repetitive failures and suggest probable root causes.

Acceptance Condition

TICVAI can maintain synchronized product, price and availability information across supported sales channels while clearly identifying failed or inconsistent records.

Screen 4.2.4 — Real-Time Channel Availability & Inventory Monitor

Purpose

Provide operations with a live view of what each channel can currently sell.

Availability Matrix

A useful visualization should be:

Product	B2C	POS	Kiosk	B2B	OTA
Adult	1,240	Shared	Shared	420	180
Child	610	Shared	Shared	160	75
VIP	82	30	—	20	10

Status

For every product/channel combination:

- Available
- Low Availability
- Sold Out
- Closed
- Suspended
- Not Assigned
- Sync Error

Live Information

Display:

- Allocated
- Sold
- Held
- Remaining

- Utilization %
- Sales Velocity
- Forecasted Sell-Out

Seat Map

For reserved seating, authorized users should be able to inspect channel availability visually against the seat map/capacity pool.

Alerts

Examples:

OTA Allocation Low — 12 tickets remaining

B2C Sold Out while B2B has 640 unused allocation

Acceptance Condition

Operations can understand current sellable availability across all channels without checking each channel independently.

Screen 4.2.5 — Channel Allocation & Rebalancing Operations

Purpose

Allow authorized users to operationally adjust inventory allocations as demand changes.

Board 1 defines the **allocation rules**.

Board 2 manages those allocations **during live operations**.

Allocation Workspace

Show:

- Channel
- Initial Allocation
- Sold
- Held
- Remaining
- Utilization
- Sales Velocity
- Forecast
- Recommended Allocation

Operational Actions

Authorized users can:

- Increase allocation
- Reduce allocation
- Return inventory
- Transfer allocation
- Release hold
- Move to shared pool
- Freeze allocation

Example

OTA

Allocated: 1,000

Sold: 280

Remaining: 720

B2C

Allocated: 6,000

Sold: 5,880

Remaining: 120

AI recommendation:

Transfer 500 units from OTA to B2C.

Guardrails

Reallocation must respect:

- Contractual allocation
- Minimum guaranteed inventory
- Capacity
- Existing holds
- Confirmed transactions
- Approval thresholds

Approval

Large allocation changes can require approval.

Example:

Changes above 10% of event capacity require Commercial Manager approval.

AI Capability

AI recommends allocation based on:

- Sales velocity
- Demand forecast
- Channel conversion
- Time to event
- Historical performance
- Contractual restrictions

Acceptance Condition

Authorized users can dynamically rebalance unsold channel capacity without affecting confirmed orders or exceeding underlying capacity.

Screen 4.2.6 — Channel Exceptions, Incidents & Recovery

Purpose

Provide one operational workspace for resolving channel problems.

Exception Categories

Support:

- Connection Failure
- Authentication Failure
- Product Sync Failure

- Pricing Mismatch
- Inventory Mismatch
- Order Failure
- Payment Error
- Timeout
- Duplicate Transaction
- Cancellation Failure
- Fulfillment Failure
- Rate Limit
- Partner Error

Incident Record

Capture:

- Incident ID
- Channel
- Partner
- Severity
- Error Type
- Affected Product/Event
- Transactions Affected
- Business Impact
- First Detected
- Owner
- SLA
- Current Status

Severity

Critical / High / Medium / Low

Recovery Actions

Depending on issue:

- Retry
- Re-sync
- Reprocess
- Pause Channel
- Disable Product
- Switch to Manual
- Release Inventory
- Cancel Pending Transaction
- Escalate
- Assign Incident

Technical Details

Provide authorized technical users with:

- Error Code

- API Request Reference
- Response
- Correlation ID
- Timestamp
- Retry Count

Sensitive data must be masked.

AI Capability

AI can summarize complex technical incidents in business language:

OTA orders are failing because the partner authentication token expired at 14:02. 37 transactions have been affected; no confirmed orders were lost.

Acceptance Condition

Channel incidents can be identified, assigned, investigated and recovered from a central operational workflow with complete traceability.

Screen 4.2.7 — Channel Performance & Commercial Analytics

Purpose

Compare the commercial effectiveness of TICVAI sales channels.

KPIs

Measure:

- Gross Sales
- Net Sales
- Transactions
- Tickets Sold
- Average Order Value
- Conversion Rate
- Cancellation Rate
- Refund Rate
- Capacity Utilization
- Revenue per Available Unit
- Fees
- Commission
- Cost of Sale where available

Compare Channels

Examples:

B2C vs POS vs Kiosk vs B2B vs OTA

Analysis Dimensions

Filter by:

- Venue
- Event
- Product
- Channel

- Partner
- Country
- Customer segment
- Date
- Time
- Currency

Channel Funnel

For digital channels where data is available:

Available → Viewed → Selected → Checkout → Paid

Partner Comparison

For B2B/OTA:

- Allocation
- Sold
- Utilization
- Revenue
- Commission
- Cancellation
- Settlement
- Growth

AI Insights

Example:

OTA-A generates 18% more bookings than OTA-B but produces 11% lower net revenue after commission.

Or:

Kiosk conversion increases significantly during the 90 minutes before event start.

Acceptance Condition

Management can objectively compare channel contribution and commercial efficiency using consistent TICVAI metrics.

Screen 4.2.8 — Channel Audit, Logs & Transaction Traceability

Purpose

Provide complete traceability across channel configuration, synchronization and transactions.

Unified Search

Search by:

- Channel
- Order ID
- Transaction ID
- Ticket
- Partner Reference
- Product

- Customer
- Correlation ID
- API Request
- User

Audit Categories

Track:

- Configuration Change
- Activation
- Suspension
- Allocation Change
- Price Assignment
- Sync
- Order
- Cancellation
- Error
- Manual Intervention
- Integration Change

Transaction Trace

For an external order, administrators should see:

Partner Request

- **TICVAI Request Received**
- **Product Validation**
- **Price Validation**
- **Capacity Hold**
- **Order Creation**
- **Payment/Account Handling**
- **Ticket Issuance**
- **Response Sent**

Audit Record

Capture:

- Timestamp
- Channel
- User/System
- Action
- Previous Value
- New Value
- Reference
- Result
- Environment

Export

Authorized users can export audit records for:

- Finance
- Partner disputes
- Compliance
- Technical investigation

Acceptance Condition

Any channel transaction or operational change can be reconstructed from initiation through final result.

Screen 4.2.9 — Channel Governance, SLA & Partner Control

Purpose

Govern live channels and ensure that internal/external channels operate within approved commercial and service conditions.

Governance Profile

Configure/monitor:

- Channel Owner
- Partner Owner
- Commercial Agreement Reference
- SLA
- Transaction Limits
- Rate Limits
- Contract Dates
- Renewal Date
- Support Contacts
- Escalation Contacts
- Review Frequency

SLA Monitoring

Track:

- Availability %
- API Response Time
- Sync Success %
- Transaction Success %
- Error Rate
- Incident Resolution Time

Example

OTA Partner SLA

Availability: **99.9%**

Actual: **99.72%**

Status: **SLA Breach**

Compliance Controls

Flag:

- Expired agreement

- Expired certificate
- Expiring API credentials
- Missing owner
- Unapproved production integration
- SLA breach
- Excessive transaction failures

Channel Actions

Depending on authority:

- Place Under Review
- Restrict
- Suspend
- Reactivate
- Schedule Review
- Escalate

Important Boundary

Detailed reseller contracts, commissions and credit remain in the dedicated **B2B / Reseller / OTA Distribution** area.

This screen governs the **operational channel relationship**.

Acceptance Condition

TICVAI can monitor whether each live channel meets its technical and operational governance obligations and can control channels that fall outside approved conditions.

Screen 4.2.10 — AI Channel Optimization & Intelligence Center

Purpose

Create the AI intelligence layer that looks across **all sales channels together** rather than optimizing each channel in isolation.

AI Analysis

Analyze:

- Sales velocity
- Conversion
- Capacity
- Allocation
- Revenue
- Net revenue
- Pricing
- Channel fees
- Commission
- Customer demand
- Time to event
- Historical performance

- Failures
- Availability

Recommendation Categories

Capacity Recommendation

Move 350 tickets from B2B allocation to B2C based on projected demand.

Channel Recommendation

Enable Kiosk sales for Family Pass during weekend periods.

Schedule Recommendation

Extend POS sales until 30 minutes after event start based on historical walk-up demand.

Commercial Recommendation

OTA-B generates high volume but low net contribution because of commission structure.

Operational Recommendation

B2B API error rate has increased 4.6x over the last 24 hours.

Scenario Simulation

Allow management to ask:

“What happens if I move 20% of OTA inventory to B2C?”

TICVAI can estimate:

- Expected units sold
- Revenue impact
- Channel utilization
- Risk
- Contractual constraints

AI Recommendation Workflow

Each recommendation should include:

- Recommendation
- Reason
- Expected Impact
- Confidence
- Constraints
- Required Approval

Actions:

Accept / Modify / Reject / Simulate / Assign / Schedule

Human Governance

AI should not independently:

- Suspend strategic channels
- Change contractual allocations
- Modify partner commissions
- Override capacity
- Change commercial prices

unless a separately approved automation policy explicitly authorizes that action.

Acceptance Condition

TICVAI provides explainable cross-channel recommendations and simulations that help administrators optimize revenue, capacity and channel performance while respecting commercial and governance controls.

Board 2 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
4.2.1	Channel Operations Command Center	Live channel health
4.2.2	Channel Connection & Integration Manager	Channel connectivity
4.2.3	Product, Price & Availability Synchronization	Data synchronization
4.2.4	Real-Time Channel Availability & Inventory Monitor	Live availability
4.2.5	Channel Allocation & Rebalancing Operations	Operational capacity movement
4.2.6	Channel Exceptions, Incidents & Recovery	Error and incident handling
4.2.7	Channel Performance & Commercial Analytics	Channel performance
4.2.8	Channel Audit, Logs & Transaction Traceability	End-to-end traceability
4.2.9	Channel Governance, SLA & Partner Control	Operational governance
4.2.10	AI Channel Optimization & Intelligence Center	AI cross-channel optimization

Area 4 is now fully scoped

We now have **2 Boards / 20 backend screens** for Sales Channel Management:

Board 1 — Configuration & Distribution Rules

Create → Products → Pricing → Capacity → Schedule → Eligibility → Restrictions → Payment/Fulfillment → Validate → Publish

Board 2 — Operations, Integration & Intelligence

Connect → Synchronize → Monitor → Rebalance → Recover → Analyze → Audit → Govern → AI Optimize

One architectural distinction should remain explicit in the SOW:

Sales Channel Management owns channel orchestration—not the underlying business engines. Product Catalogue owns products, Pricing owns price calculation, Capacity owns inventory, Payment owns payment processing, Ticket Media owns fulfillment credentials, and B2B/OTA owns partner commercial agreements. Sales Channel Management brings those approved capabilities together and governs how each channel consumes them.
