Ticket Resale Marketplace

Board 1 — Resale Marketplace Configuration & Listing Management

The screenshot displays the TICVAI Resale Marketplace Command Center interface. The top navigation bar includes the TICVAI logo, user profile (Sarah Admin), and system status (2 Boards, 20 Screens, Area 3 of 17). The main content area is organized into a grid of modules:

- 3.1.1 Resale Marketplace Command Center:** Overview of listing status (Active: 1,842, Pending Approval: 46, Available for Resale: 3,216, Listings Set Today: 378, Expiring in 24H: 132). Includes metrics for Avg Resale Price, Gross Resale Value, Marketplace Fees, Seller Proceeds, and Commission Rate.
- 3.1.2 Resale Eligibility Rule Configuration:** Rule Builder and Rule Library for defining eligibility conditions.
- 3.1.3 Resale Policy & Marketplace Settings:** Configuration for marketplace settings, seller policy, buyer policy, and resale models.
- 3.1.4 Listing Creation & Seller Configuration:** Seller Listing Flow, Ticket Details, Eligibility Result, and Seller Options.
- 3.1.5 Resale Pricing & Price Guardrails:** Pricing Rules, Set Listing Price, and Price Range configuration.
- 3.1.6 Resale Fees, Commission & Seller Proceeds:** Fee Configuration, Calculation Preview, and Seller Proceeds.
- 3.1.7 Listing Approval & Moderation:** Pending Approval, Rejected, and Escalated listings.
- 3.1.8 Resale Inventory & Availability Management:** Inventory Feed and Availability by Section.
- 3.1.9 Listing Lifecycle, Expiry & Cancellation:** All Listings, Expiring Soon, Expired, and Cancelled.
- 3.1.10 AI Resale Configuration & Recommendations:** AI Insights, Price Recommendations, Demand Forecast, and Anomaly Alerts.

Board Objective

Board 1 establishes the complete **administrative and commercial configuration layer for TICVAI's official ticket resale marketplace.**

It determines:

Which tickets may be resold → Who may resell → When resale is allowed → How listings are created → What prices are permitted → What fees apply → Whether approval is required → How inventory is controlled → When listings expire → How AI assists.

The board is based primarily on the resale requirements in **1.6.1-1.6.19**, including marketplace configuration, eligibility, pricing rules, listing management, inventory synchronization, cancellation, fees, approval and AI-assisted resale recommendations.

Important boundary: Board 1 ends at marketplace/listing management. The actual completed resale transaction—buyer purchase, ownership transfer, old credential invalidation, new credential issuance, seller settlement, disputes and transaction audit—belongs to **Board 2**.

Screen 3.1.1 — Resale Marketplace Command Center

Purpose

Provide administrators with a centralized operational view of the TICVAI resale marketplace.

KPI Dashboard

Display:

- Active Listings
- Pending Approval
- Tickets Available for Resale
- Listings Sold Today
- Expiring Listings
- Suspended Listings
- Rejected Listings
- Average Resale Price
- Gross Resale Value
- Marketplace Fees
- Seller Proceeds
- Conversion Rate

Marketplace Listing Table

Each listing should show:

- Listing ID
- Original Order/Ticket ID
- Event/Product
- Venue
- Event Date
- Section/Row/Seat
- Seller
- Original Price
- Listed Price
- Price Variance %
- Marketplace Fee
- Seller Proceeds
- Listing Date

- Expiry
- Status
- Risk Indicator

Listing Statuses

Support statuses such as:

Draft → Pending Approval → Active → Reserved → Sold

and exception states:

Rejected / Suspended / Cancelled / Expired / Withdrawn

Filters

Filter by:

- Venue
- Event
- Product
- Seller
- Date
- Listing status
- Price range
- Resale channel
- Risk level
- Approval status

AI Capability

AI shall highlight marketplace anomalies.

Example:

Demand Alert: Saturday Final is 96% sold. Resale demand is significantly higher than current available inventory.

Or:

Pricing Alert: 14 listings are priced substantially above configured marketplace limits.

Acceptance Condition

An authorized administrator can understand the current state of the resale marketplace, identify listings requiring attention and navigate directly to the appropriate operational action.

Screen 3.1.2 — Resale Eligibility Rule Configuration

Purpose

Define **whether a ticket is allowed to enter the resale marketplace**.

Not every TICVAI ticket should automatically be resellable.

Eligibility Configuration

Administrators can define eligibility by:

- Product
- Ticket type
- Event
- Venue
- Performance
- Membership type
- Sales channel
- Customer segment
- Price category
- Promotion
- Ticket status
- Payment status
- Ticket ownership status

Eligibility Rules**Examples:****Allow resale only if:**

- Ticket is fully paid.
- Ticket has not been scanned.
- Ticket has not expired.
- Ticket has not already been transferred.
- Event has not started.
- Ticket is not refunded.
- Ticket is not complimentary.
- Ticket is not staff/internal.
- Ticket is not blocked.
- Ticket is not under dispute.

Resale Window**Configure:**

- Resale opens X days before event.
- Resale closes X hours before event.
- Specific resale start/end date.
- Allow resale immediately after purchase.
- Blackout period.

Example:

Resale Opens: 30 days before event

Resale Closes: 2 hours before event.

Restrictions

Support:

- Maximum resale attempts
- Maximum listings per customer
- Minimum ownership period
- Identity verification requirement
- Original purchaser only
- Membership restriction

Rule Priority

TICVAI should resolve overlapping rules using controlled priority.

Example:

Platform → Venue → Event → Product → Ticket

The more specific approved rule may override the general rule.

AI Capability

AI can identify contradictory eligibility rules or unusually restrictive configurations.

Acceptance Condition

TICVAI can determine automatically and consistently whether an individual issued ticket is eligible for resale.

Screen 3.1.3 — Resale Policy & Marketplace Settings

Purpose

Configure the overall business policies governing a resale marketplace.

Marketplace Configuration

Administrators can define:

- Marketplace name
- Marketplace status
- Applicable organization
- Venue
- Brand
- Currency
- Time zone
- Supported language
- Marketplace sales channel
- Customer terms

- Seller terms

Marketplace Modes

Support configurable models such as:

Fixed Price Resale

Seller selects a permitted price.

Face Value Resale

Ticket must be listed at original face value.

Capped Resale

Seller can change price within configured boundaries.

Operator Controlled

Operator determines resale price.

AI Recommended

AI recommends a price within approved commercial guardrails.

Seller Policy

Configure:

- Seller verification
- Identity requirements
- Bank/payout information
- Seller terms acceptance
- Listing confirmation
- Seller notifications

Buyer Policy

Configure:

- Buyer terms
- Marketplace disclosures
- Resale ticket labeling
- Refund conditions
- Service fees
- Purchase limits

Market Scope

Policies can apply at:

Tenant → Brand → Venue → Event → Product

Acceptance Condition

Administrators can establish different resale marketplace policies for different organizations, venues, events and products without software development.

Screen 3.1.4 — Listing Creation & Seller Configuration

Purpose

Define how eligible ticket holders create resale listings.

Seller Journey Configuration

The configurable journey should support:

My Tickets → Select Ticket → Resell Ticket → Eligibility Check → Set Price → Review Fees → Accept Terms → Submit Listing

Ticket Information

When listing a ticket, display:

- Event
- Venue
- Date/time
- Ticket type
- Section
- Row
- Seat
- Original price
- Ticket status
- Resale eligibility

Seller Configuration

Configure whether seller may:

- Choose selling price
- Accept recommended price
- Edit active listing
- Withdraw listing
- Relist expired listing
- Change price
- Select payout method

Listing Data

Capture:

- Listing ID
- Ticket ID
- Seller
- Listing price
- Original price
- Fee

- Estimated proceeds
- Listing date
- Expiration
- Seller terms acceptance

Multiple Tickets

Support:

- Single ticket listing
- Multiple ticket listing
- Adjacent-seat group

Potential rules:

Sell Together Only

or

Allow Individual Sale

Validation

Before listing, TICVAI rechecks:

- Ticket ownership
- Ticket validity
- Resale eligibility
- Payment status
- Existing listing
- Ticket scan status

Acceptance Condition

An eligible ticket holder can create a resale listing through a controlled workflow without allowing invalid, already-used or unauthorized tickets to enter the marketplace.

Screen 3.1.5 — Resale Pricing & Price Guardrails

Purpose

Control the permitted resale price while protecting the operator, seller and buyer.

Pricing Rules

Configure:

- Face-value only
- Minimum resale price
- Maximum resale price
- Maximum markup %
- Maximum discount %
- Fixed resale price

- Dynamic permitted range
- Event-specific range
- Product-specific range

Example

Original Ticket:

AED 200

Configured resale policy:

- Minimum: AED 160
- Maximum: AED 240

Seller enters:

AED 275

TICVAI responds:

Listing price exceeds the permitted maximum of AED 240.

Price References

Rules may reference:

- Original face value
- Original paid price
- Current selling price
- Current dynamic price
- Event price
- Price category

This distinction is important where the original customer purchased using a promotion.

Price Change Rules

Configure:

- Seller can edit price
- Number of price changes
- Minimum interval between changes
- Automatic price reduction
- Freeze price after reservation
- Price adjustment cutoff

AI Pricing

AI may recommend:

Suggested Resale Price: AED 225

based on:

- Demand
- Remaining capacity

- Time until event
- Seat location
- Historical resale conversion
- Current marketplace inventory
- Current primary-market price

Governance

AI recommendations must remain within operator-defined pricing guardrails.

Acceptance Condition

No resale listing can be published at a price outside the applicable approved marketplace pricing policy.

Screen 3.1.6 — Resale Fees, Commission & Seller Proceeds

Purpose

Configure the commercial model of the resale marketplace.

Fee Types

Support:

- Seller fee
- Buyer fee
- Marketplace commission
- Flat transaction fee
- Percentage fee
- Payment processing fee
- Administrative fee
- Venue fee
- Tax on fee

Fee Configuration

Define by:

- Tenant
- Venue
- Event
- Product
- Seller type
- Buyer type
- Channel
- Currency

Calculation Example

Listing Price: AED 250

Seller Commission: 10% = AED 25

Seller Proceeds: AED 225

Buyer:

Ticket: AED 250

Buyer Service Fee: AED 12

Total: AED 262

Seller Preview

Before listing, seller should see:

Listing Price

Fees / Commission

Estimated Seller Proceeds

Financial Ownership

This screen defines the **commercial rules**.

Actual payout, accounting, settlement and reconciliation are handled through Board 2 and the TICVAI Finance/Payment services.

AI Capability

AI can model the effect of fee structures on:

- Listing volume
- Conversion
- Seller participation
- Marketplace revenue

Acceptance Condition

TICVAI can automatically calculate and transparently display marketplace fees, buyer charges and estimated seller proceeds using configured rules.

Screen 3.1.7 — Listing Approval & Moderation

Purpose

Determine whether listings are published automatically or require operator review.

Approval Modes

Support:

Automatic Approval

Listing publishes if all rules pass.

Manual Approval

Operator must approve.

Risk-Based Approval

Low-risk listings publish automatically; unusual listings require review.

Approval Rules

Manual review can be triggered by:

- High resale price
- Unusual discount
- High-value ticket
- VIP ticket
- Seller risk
- New seller
- Multiple listings
- Identity issue
- Payment issue
- Ticket ownership concern
- Fraud indicator

Moderation Queue

Display:

- Listing
- Seller
- Ticket
- Event
- Original price
- Listing price
- Price variance
- Risk score
- Trigger reason
- Submitted date

Actions

Authorized users can:

- Approve
- Reject
- Request Information
- Suspend
- Escalate
- Add Internal Note

AI Capability

AI can summarize why the listing was flagged.

Example:

This account listed 12 high-value tickets within 20 minutes across three events. Review seller activity before approval.

Acceptance Condition

Listings requiring governance cannot become publicly available until the configured approval or risk-control conditions are satisfied.

Screen 3.1.8 — Resale Inventory & Availability Management

Purpose

Maintain an accurate, synchronized view of tickets currently available through resale.

Inventory Dashboard**Show inventory by:**

- Event
- Performance
- Product
- Section
- Row
- Seat
- Price
- Listing status

Inventory Types**Clearly distinguish:****Primary Inventory**

Unsold original ticket inventory.

Resale Inventory

Previously purchased tickets being offered by customers.

They may appear together to the buyer but must remain separately identifiable in the backend.

Seat Map Integration

On reserved seating events, show resale tickets visually on the seat map.

Example:

- Standard Available
- Resale Available
- Reserved
- Sold
- Held
- Blocked

Real-Time Synchronization

If a ticket:

- Is sold
- Is withdrawn
- Is refunded
- Is invalidated
- Is transferred
- Becomes ineligible

the marketplace inventory must update accordingly.

Duplicate Protection

The same ticket cannot exist in multiple active resale listings.

Acceptance Condition

Marketplace availability accurately represents eligible resale inventory and prevents the same ticket from being sold or listed more than once.

Screen 3.1.9 — Listing Lifecycle, Expiry & Cancellation

Purpose

Control the full lifecycle of a resale listing from creation until sale, withdrawal or expiry.

Listing Lifecycle

Recommended status model:

Draft

↓

Pending Approval

↓

Active

↓

Reserved

↓

Sold

Alternative endpoints:

- Rejected
- Suspended
- Withdrawn
- Cancelled
- Expired

Expiry Configuration

Listings can expire:

- X minutes before event
- X hours before event
- At event start
- At configured date/time
- When resale window closes

Seller Cancellation**Configure:**

- Seller can withdraw anytime
- Seller cannot withdraw while reserved
- Cancellation cutoff
- Cancellation fee
- Maximum withdrawals

Automatic Cancellation**TICVAI may automatically remove a listing if:**

- Ticket becomes invalid.
- Event is cancelled.
- Event changes materially.
- Ticket is refunded.
- Ticket is transferred.
- Payment is reversed.
- Eligibility changes.
- Fraud is detected.

Expired Listing Behavior**Configure whether the ticket:**

- Returns to customer as normal ticket
- Can be relisted
- Requires operator action

Notifications**Trigger notifications for:**

- Listing approved
- Listing rejected
- Price changed
- Listing expiring
- Listing expired
- Listing suspended

- Listing withdrawn
- Listing sold

Acceptance Condition

Every resale listing follows a controlled and traceable lifecycle, with automatic removal when it is no longer commercially or operationally valid.

Screen 3.1.10 — AI Resale Configuration & Marketplace Recommendations

Purpose

Provide TICVAI's AI intelligence layer for optimizing resale configuration while keeping commercial control with the operator.

AI Marketplace Intelligence

AI should analyze:

- Primary sales
- Resale listings
- Marketplace inventory
- Event demand
- Remaining capacity
- Historical resale activity
- Seat location
- Time to event
- Listing conversion
- Price movement
- Seller behavior

AI Recommendations

Examples:

Pricing Recommendation

Increase the recommended resale range for Section A from AED 220–240 to AED 235–260 due to high demand.

Inventory Alert

38 resale tickets are available in Section C while primary inventory remains unsold in the same category.

Conversion Recommendation

Listings priced 8–12% below the current primary price are converting 2.3× faster.

Resale Window Recommendation

Most successful listings for this venue occur within seven days of the event.

Configuration

Administrators can control which AI capabilities are enabled:

- Pricing recommendations
- Demand prediction
- Listing recommendations
- Seller risk recommendations
- Expiry recommendations
- Marketplace optimization
- Anomaly detection

Recommendation Actions

Each recommendation can be:

- Accept
- Modify
- Reject
- Ignore
- Assign for Review

Explainability

AI should show the principal factors behind significant recommendations.

Governance

AI shall not autonomously:

- Approve restricted listings
- Override price caps
- Change contractual fees
- Make seller payouts
- Invalidate tickets
- Transfer ownership

unless a separately configured authorized automation explicitly permits the action.

Acceptance Condition

Administrators receive explainable, actionable AI recommendations for marketplace configuration and performance without AI bypassing approved commercial, security or governance controls.

Board 1 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
3.1.1	Resale Marketplace Command Center	Marketplace oversight

Screen	Backend Screen	Primary Responsibility
3.1.2	Resale Eligibility Rule Configuration	Determine what can be resold
3.1.3	Resale Policy & Marketplace Settings	Marketplace business policies
3.1.4	Listing Creation & Seller Configuration	Seller/listing journey
3.1.5	Resale Pricing & Price Guardrails	Resale price control
3.1.6	Resale Fees, Commission & Seller Proceeds	Marketplace commercial model
3.1.7	Listing Approval & Moderation	Listing governance
3.1.8	Resale Inventory & Availability Management	Resale inventory synchronization
3.1.9	Listing Lifecycle, Expiry & Cancellation	Listing lifecycle
3.1.10	AI Resale Configuration & Marketplace Recommendations	AI optimization

Board 1 → Board 2 Boundary

The clean separation is:

Board 1 — Before the resale purchase

Eligibility → Policy → Listing → Price → Fees → Approval → Inventory → Expiry → AI

Then:

Board 2 — After / during the resale transaction

Buyer Purchase → Ownership Transfer → Old Credential Cancellation → New Credential → Fraud Protection → Capacity Reconciliation → Seller Settlement → Disputes → Audit → Analytics

Board 2 — Resale Transactions, Credential Transfer & Intelligence

10 Backend Screens

Board Objective

Board 2 manages what happens **once a resale listing attracts a buyer and enters the transaction stage.**

Board 1 controlled:

Eligibility → Listing → Pricing → Fees → Approval → Inventory → Listing Lifecycle

Board 2 controls:

Buyer Purchase → Inventory Lock → Ownership Transfer → Credential Revocation/Reissue → Fraud Control → Reconciliation → Seller Settlement → Exceptions → Audit → AI Analytics

The key principle is that a resale is **not simply another ticket sale**. TICVAI must securely move the entitlement from the original holder to the new buyer while preserving the original transaction history, preventing duplicate access, maintaining capacity integrity, and correctly settling the financial transaction.

Screen 3.2.1 — Resale Operations Command Center

Purpose

Provide operations teams with a real-time control center for all resale transactions after listings move into purchase/fulfillment.

KPI Dashboard

Display:

- Resale Transactions Today
- Gross Resale Value
- Completed Transfers
- Pending Transfers
- Failed Transfers
- Credential Reissues
- Pending Seller Settlements
- Settlement Value
- Transactions Under Review
- Fraud Alerts
- Disputes
- Refunds

Transaction Queue**Each resale transaction shall show:**

- Resale Transaction ID
- Listing ID
- Original Order ID
- Original Ticket ID
- Event
- Venue
- Seller
- Buyer
- Section / Row / Seat
- Resale Price
- Buyer Total
- Seller Proceeds
- Purchase Status
- Ownership Status
- Credential Status
- Settlement Status
- Risk Score
- Transaction Date

Transaction Status**Suggested lifecycle:**

Buyer Reserved → Payment Pending → Paid → Transfer Processing → Credential Reissued → Completed

Exception statuses:

- Payment Failed
- Transfer Failed
- Under Review
- Suspended
- Refunded
- Disputed
- Cancelled

Operational Actions

Authorized users can:

- Open transaction
- Retry transfer
- Hold transaction
- Release transaction
- Escalate
- View credential
- View settlement
- View fraud assessment
- View audit history

AI Capability

AI should prioritize transactions requiring intervention.

Example:

Critical: Payment completed, but ownership transfer has remained incomplete for 11 minutes.

Acceptance Condition

Operations can monitor every resale transaction from buyer payment through final completion and immediately identify transactions requiring intervention.

Screen 3.2.2 — Buyer Purchase & Resale Order Management

Purpose

Manage the buyer-side purchase transaction and ensure that a resale ticket is temporarily protected while checkout occurs.

Purchase Flow

The system shall support:

Select Resale Ticket → Temporary Hold → Buyer Identification → Checkout → Payment → Confirmation → Transfer

Inventory Lock

When a buyer begins checkout, TICVAI should temporarily lock the listing.

Configure:

- Hold duration
- Hold extension rules
- Payment timeout
- Automatic release
- Concurrent buyer handling

Example:

Seat A-14 reserved for 8:00 minutes

Other buyers cannot purchase the same resale listing during the active hold.

Buyer Information

Capture/reference:

- Customer ID
- Name
- Email
- Mobile
- Membership
- Loyalty profile
- Identity verification where required
- Billing information

Resale Order

Create a distinct resale transaction linked to:

Original Order → Original Ticket → Resale Listing → Resale Order

This relationship must never be lost.

Pricing Breakdown

Buyer sees:

- Resale ticket price
- Buyer service fee
- Taxes
- Other permitted charges
- Total payable

Payment

Consume the TICVAI Payment Engine for:

- Card
- Wallet
- Supported alternative payment methods
- Payment authorization
- Payment capture
- Failure handling

Acceptance Condition

A buyer can securely purchase a resale ticket without the same listing being sold concurrently to another buyer, and TICVAI retains the complete relationship to the original transaction.

Screen 3.2.3 — Ticket Ownership Transfer Management

Purpose

Securely transfer the ticket entitlement from the original seller to the resale buyer.

Ownership Chain

TICVAI must maintain:

Original Purchaser → Original Holder → Resale Seller → New Buyer

rather than overwriting historical ownership.

Transfer Workspace

Display:

Seller

- Customer
- Original order
- Ticket
- Ownership status

Buyer

- Customer
- New resale order
- Identity
- Membership/account

Ticket

- Event
- Product
- Seat
- Entitlements
- Validity

Transfer Preconditions

Before transfer, validate:

- Buyer payment completed
- Listing remains valid
- Seller still owns ticket
- Ticket has not been scanned
- Ticket has not been refunded
- Event remains active
- Ticket has not been transferred elsewhere
- Capacity remains valid
- No fraud hold exists

Transfer Result**Upon success:****Seller Ownership:** Historical / Transferred**Buyer Ownership:** Active**Entitlement Transfer****Transfer applicable:**

- Admission entitlement
- Seat assignment
- Add-ons where permitted
- Access rights
- Associated benefits

Some entitlements may explicitly be **non-transferable**.

Acceptance Condition

TICVAI securely transfers ownership to the buyer while retaining the seller and original purchaser in the permanent ticket ownership history.

Screen 3.2.4 — Credential Revocation & Regeneration**Purpose**

Ensure the seller's old ticket credential cannot continue to provide access after resale.

This is one of the most important security functions in the module.

Transfer Sequence**Once ownership transfer succeeds:****Old Credential → Revoke**

↓

Generate New Credential

↓

Assign to Buyer**Supported Credentials****Depending on TICVAI configuration:**

- Static QR
- Dynamic QR
- Barcode
- NFC
- RFID
- Mobile Wallet pass
- Digital ticket
- Wearable credential

Old Credential Status**Set to:****Revoked — Resold**

The original ticket record remains in history but cannot be used for access.

New Credential**Generate:**

- New credential ID
- New QR/token
- Buyer association
- Original ticket relationship
- New security keys/token where applicable
- New wallet pass where applicable

Access Control Synchronization

Immediately communicate the change to Access Control.

Where devices are offline, the architecture should support controlled revocation synchronization according to TICVAI's offline access model.

Buyer Delivery**Deliver through configured channels:**

- TICVAI account
- Mobile app
- Email
- Wallet
- Other configured delivery methods

Acceptance Condition

Following a successful resale, the seller's credential cannot provide valid access and the buyer receives a new valid credential linked to the transferred entitlement.

Screen 3.2.5 — Resale Fraud & Duplicate Sale Protection

Purpose

Protect TICVAI, venues, sellers and buyers from resale abuse and fraudulent ticket activity.

Fraud Monitoring

Monitor:

- Duplicate listings
- Multiple resale attempts
- Same ticket listed simultaneously
- Unusual seller volume
- High-frequency resale
- Suspicious pricing
- Multiple accounts
- Payment anomalies
- Identity mismatch
- Credential reuse
- Repeated failed transactions
- Account/device anomalies where permitted

Risk Score

Each transaction can receive:

Low / Medium / High / Critical

with explainable contributing factors.

Example

High Risk — 84/100

Seller listed 16 premium tickets across four accounts associated with the same payment profile.

Automated Controls

Based on configured rules:

- Allow
- Require verification
- Hold transaction
- Require manual review
- Block listing
- Suspend seller
- Escalate

Credential Fraud

Detect attempted use of:

- Revoked seller credential
- Screenshots where dynamic credential protection applies
- Duplicated credentials
- Invalidated tickets

AI Capability

AI can detect behavioral patterns and anomalies that static rules may miss.

Human Review

Provide evidence and reasoning before administrators make material account decisions.

Acceptance Condition

Potentially fraudulent resale activity is identified before or during fulfillment, with configurable intervention based on risk level.

Screen 3.2.6 — Capacity & Inventory Reconciliation**Purpose**

Ensure resale activity never creates additional venue capacity or corrupts primary ticket inventory.

Core Principle**A resale represents:**

Transfer of an existing entitlement — not creation of new capacity.

Reconciliation Dashboard**For each event show:**

- Venue capacity
- Sellable capacity
- Primary tickets sold
- Primary inventory remaining
- Tickets listed for resale
- Resale tickets sold
- Holds
- Cancelled tickets
- Refunded tickets
- Active entitlements

Seat Reconciliation**For reserved seating:****Seat A-14**

Original status:

Sold

During resale:

Sold / Listed for Resale

After resale:

Sold / New Owner

It should never become an additional available seat in primary inventory unless a separate business process explicitly returns it.

Validation

Detect:

- Duplicate active entitlement
- Seat assigned to multiple active owners
- Listing without ticket
- Sold resale listing still active
- Ownership mismatch
- Credential mismatch
- Capacity discrepancy

Reconciliation Actions

Authorized users can:

- Investigate
- Re-sync
- Correct mapping
- Hold ticket
- Escalate
- Generate reconciliation report

AI Capability

AI should highlight unusual discrepancies and suggest likely root causes.

Acceptance Condition

The number of valid admissions and seat assignments remains consistent with configured venue/event capacity regardless of resale activity.

Screen 3.2.7 — Seller Settlement & Payout Management

Purpose

Manage the financial amount owed to sellers following successful resale.

Settlement Record

Show:

- Settlement ID
- Resale Transaction

- Seller
- Listing Price
- Seller Fee
- Commission
- Processing fee
- Applicable tax
- Adjustments
- Seller Proceeds
- Currency
- Payout method
- Settlement status
- Expected payout date

Settlement Status

Suggested:

Pending Completion → Eligible for Settlement → Scheduled → Processing → Paid

Exception statuses:

- On Hold
- Failed
- Reversed
- Disputed

Settlement Timing

Configure:

- Immediately after resale
- X days after resale
- After event completion
- X days after event
- After access validation
- Operator-defined settlement cycle

A venue may prefer:

Seller payout occurs only after the event has successfully taken place.

Payout Controls

Support:

- Minimum payout threshold
- Settlement batches
- Seller verification
- Payment account verification

- Manual hold
- Compliance hold
- Refund/dispute hold

Finance Integration

The resale module calculates and tracks the resale settlement, while actual accounting/payment execution should integrate with TICVAI Finance and the configured payment provider.

Acceptance Condition

Every completed resale produces an auditable seller settlement record with accurate proceeds, deductions, payout timing and settlement status.

Screen 3.2.8 — Refunds, Disputes & Resale Exceptions

Purpose

Handle exceptional scenarios that occur after a resale transaction.

Exception Types

Support:

- Event cancellation
- Event postponement
- Buyer refund
- Seller dispute
- Buyer dispute
- Payment chargeback
- Failed ownership transfer
- Failed credential issuance
- Duplicate transaction
- Ticket access issue
- Seller payout dispute
- Incorrect ticket
- Venue change
- Seat change

Case Workspace

Each case should contain:

- Case ID
- Resale transaction
- Original order
- Seller
- Buyer

- Event
- Issue type
- Financial amount
- Credential status
- Settlement status
- Case owner
- SLA
- Evidence
- Notes
- Resolution

Resolution Actions

Depending on permission:

- Refund buyer
- Reverse settlement
- Hold settlement
- Reissue credential
- Retry transfer
- Cancel transaction
- Return ownership
- Provide replacement ticket
- Escalate

Event Cancellation

The system must know:

Who receives the refund?

This cannot be assumed because:

- Original purchaser paid the primary ticket price.
- Resale buyer paid the resale price.
- Seller may already have received proceeds.

The applicable resale policy and finance rules must determine treatment.

AI Capability

AI can summarize complex cases and recommend the relevant configured policy.

Acceptance Condition

Operations can resolve resale exceptions without breaking the original order, resale transaction, ownership, credential or financial history.

Screen 3.2.9 — Resale Audit & Ownership History

Purpose

Provide complete end-to-end traceability of every ticket that enters the resale ecosystem.

Ticket Timeline

Example:

01 May — Ticket purchased by Customer A

14 May — Listed for resale

14 May — Listing approved

17 May — Price changed AED 350 → AED 325

18 May — Purchased by Customer B

18 May — Customer A credential revoked

18 May — Ownership transferred

18 May — New credential issued to Customer B

19 May — Seller settlement scheduled

Audit Data

Capture:

- Timestamp
- User/system
- Action
- Original order
- Resale order
- Ticket
- Seller
- Buyer
- Listing
- Price
- Fee
- Credential
- Ownership
- Payment
- Settlement
- Approval
- Device/channel where applicable

Search

Administrators can search by:

- Ticket ID

- Credential
- Order
- Resale transaction
- Seller
- Buyer
- Seat
- Event
- Payment reference

Investigation Mode

Provide a consolidated view:

Commercial History + Ownership History + Credential History + Access History + Settlement History

subject to role permissions.

Export

Authorized users can export audit information for:

- Finance
- Compliance
- Fraud investigation
- Customer dispute
- Venue operations

Acceptance Condition

TICVAI can reconstruct the complete history of a resold ticket from original issuance through resale, ownership transfer, credential replacement and financial settlement.

Screen 3.2.10 — Resale Analytics & AI Intelligence

Purpose

Provide management with commercial, operational and predictive intelligence about the resale marketplace.

Executive KPIs

Display:

- Gross Resale Value
- Resale Transactions
- Resale Conversion Rate
- Average Listing Price
- Average Sale Price
- Average Markup/Discount

- Seller Proceeds
- Marketplace Revenue
- Average Time to Sell
- Listings-to-Sales Ratio
- Fraud Rate
- Refund/Dispute Rate

Analysis Dimensions

Analyze by:

- Venue
- Event
- Product
- Ticket type
- Section
- Seat category
- Seller segment
- Buyer segment
- Sales channel
- Time before event
- Price range

Marketplace Funnel

Visualize:

Eligible Tickets

Listings Created

Listings Approved

Listings Viewed

Checkout Started

Resale Completed

Primary vs Resale Intelligence

One particularly valuable TICVAI view should compare:

Primary Market vs Resale Market

including:

- Primary availability
- Resale availability
- Primary price
- Average resale price
- Demand
- Conversion
- Sell-through

This can identify pricing opportunities for the primary ticketing business.

AI Intelligence

Examples:

Demand Insight

Section 101 resale tickets are selling 3.1× faster than primary inventory.

Pricing Insight

Resale transactions indicate customers are willing to pay approximately 14% above the current primary price for weekend performances.

Inventory Insight

Increasing primary availability may be preferable to allowing additional resale inventory for this event.

Fraud Insight

A cluster of accounts demonstrates correlated listing and payment behavior requiring investigation.

Forecasting

Where sufficient data exists, AI can forecast:

- Expected resale demand
- Expected listing volume
- Expected resale price
- Expected conversion
- Expected marketplace revenue

AI-to-Pricing Feedback

Insights may be **recommended** to the TICVAI Dynamic Pricing Engine.

They should not automatically alter primary ticket pricing unless an authorized automated pricing policy permits it.

Acceptance Condition

Management can evaluate the commercial and operational performance of resale and use explainable AI insights to improve primary pricing, marketplace policies and future event strategy.

Board 2 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
3.2.1	Resale Operations Command Center	End-to-end transaction monitoring
3.2.2	Buyer Purchase & Resale Order Management	Buyer checkout and inventory locking
3.2.3	Ticket Ownership Transfer Management	Seller-to-buyer entitlement transfer
3.2.4	Credential Revocation & Regeneration	Secure credential replacement
3.2.5	Resale Fraud & Duplicate Sale Protection	Fraud/risk controls
3.2.6	Capacity & Inventory Reconciliation	Capacity integrity
3.2.7	Seller Settlement & Payout Management	Seller financial settlement
3.2.8	Refunds, Disputes & Resale Exceptions	Exception management
3.2.9	Resale Audit & Ownership History	Full ticket traceability
3.2.10	Resale Analytics & AI Intelligence	Marketplace intelligence

Area 3 is now fully scoped

We now have **2 Boards / 20 backend screens** for the Ticket Resale Marketplace:

Board 1 — Marketplace Configuration & Listing Management

Eligibility → Policy → Seller Listing → Price → Fees → Approval → Inventory → Listing Lifecycle → AI Recommendations

Board 2 — Transactions, Transfer & Intelligence

Buyer → Payment/Hold → Ownership → Credential → Fraud → Reconciliation → Settlement → Exceptions → Audit → Analytics

There is one architectural rule I would make explicit in the SOW:

A resale transaction must never create a second admission entitlement. It transfers control of the existing entitlement to the new owner, invalidates the previous active credential, preserves the complete ownership chain, and maintains the original capacity position.

That requirement is fundamental to making TICVAI's resale architecture secure.

Ticket Resale Marketplace

Board 3 — White-Label Resale Marketplace & Customer Experience

Board Objective

Board 3 defines **how the end customer actually accesses, uses, sells through, and buys from TICVAI's official resale marketplace.**

The existing resale architecture already defines the backend marketplace configuration and transaction processing across Boards 1 and 2.

Board 3 closes the missing experience layer:

Board 1 — Configure Marketplace

Eligibility → Policy → Listings → Pricing → Fees → Approval → Inventory

Board 2 — Execute Resale Transaction

Buyer → Payment → Ownership Transfer → Credentials → Fraud → Settlement → Audit

Board 3 — Customer Experience

Seller Journey → Buyer Journey → White-Label Portal → Client B2C Integration → Hosted Marketplace → Headless/API

Fundamental Product Principle

TICVAI shall build **one reusable multi-tenant resale marketplace capability** rather than requiring each client to develop its own resale solution.

Each TICVAI client shall be able to deploy the marketplace through one or more of three models:

Model A — Embedded White-Label

Marketplace embedded within the client's existing TICVAI B2C/customer account.

Model B — TICVAI-Hosted White-Label

TICVAI hosts the secure marketplace experience using the client's branding, domain configuration and commercial policies.

Model C — Headless/API

The client creates its own frontend while TICVAI provides the marketplace APIs and transaction engine.

In every model:

TICVAI owns the marketplace technology and transaction integrity.

The client owns its marketplace branding, inventory eligibility, commercial rules and customer proposition.

3.3.1 — My Tickets & Resale Marketplace Entry

Purpose

Provide the authenticated ticket holder with a simple and secure entry point into the official resale journey.

The preferred starting point should be the customer's existing:

My Account → My Tickets

rather than asking customers to manually enter ticket numbers or upload ticket PDFs.

Ticket Wallet

Display the customer's current tickets with:

- Event/Product
- Venue
- Date/Time
- Ticket Type
- Section/Row/Seat
- Ticket Holder
- Virtual Ticket ID reference
- Ticket Status
- Resale Status
- Available Actions

Customer Actions

Depending on ticket configuration:

- View Ticket
- Add to Wallet
- Transfer
- Exchange
- Upgrade
- **Resell Ticket**
- Request Refund

Only actions permitted by applicable policies should appear.

Resale Indicator**Examples:**

✓ **Eligible for Official Resale**

or:

Resale Not Available

with an understandable reason where appropriate.

Marketplace Entry**Also provide:****Browse Official Resale Marketplace**

allowing the same customer to act as a buyer.

Authentication

Access should use the client's normal customer authentication where available:

- Customer account
- SSO
- Passwordless login
- OTP
- App authentication

White-Label Requirement**The screen must inherit:**

- Client logo
- Brand
- Colors
- Typography
- Language
- Support details
- Marketplace name

The end customer should not feel they have unexpectedly left the client's digital environment.

Acceptance Condition

An authenticated customer can immediately identify which owned tickets are eligible for resale and begin the official resale process without manually proving ticket ownership.

3.3.2 — Resale Eligibility & Ticket Selection

Purpose

Explain whether the selected ticket can be resold before allowing a listing to be created.

Eligibility Check

Consume the **Board 1 Resale Eligibility Engine**.

Check applicable conditions such as:

- Ticket ownership
- Payment status
- Ticket validity
- Scan/use status
- Event status
- Resale window
- Ticket type
- Product
- Promotion restrictions
- Membership restrictions
- Transfer status
- Refund status
- Existing listing
- Fraud/security hold

Eligible Experience

Display:

✓ **Your ticket is eligible for resale**

with:

- Event
- Date
- Venue
- Seat
- Original price
- Resale closing time
- Applicable marketplace conditions

Ineligible Experience

Do not simply display:

Error 5042.

Instead provide customer-friendly explanations such as:

This ticket cannot currently be resold because it has already been used.

or:

Resale for this event closes two hours before the performance.

Multiple Tickets**Where an order contains multiple eligible tickets:**

A14 ☒

A15 ☒

A16 ☐

A17 ☐

Allow applicable configurations such as:

- Sell individually
- Sell selected tickets
- Sell together only
- Adjacent-seat group

Backend Boundary

The frontend does **not determine eligibility itself**.

Customer UI → Board 1 Eligibility Engine → Result → Customer UI

Acceptance Condition

Customers receive an immediate, understandable and authoritative resale eligibility decision before entering the listing process.

3.3.3 — Create Listing & Resale Price Selection

Purpose

Allow an eligible seller to select a resale price within the client's approved marketplace rules.

Ticket Summary**Display:****Museum Evening Admission**

Saturday 19 September

7:00 PM

Section A • Row 4 • Seat 18

Original Face Value:

AED 200

Pricing Experience**Depending on Board 1 policy, support:**

- Face Value Only
- Fixed Price
- Seller Selected Price
- Capped Price
- Operator Controlled
- AI Recommended Price

Price Guardrails

Example:

Minimum Allowed: **AED 160**

Maximum Allowed: **AED 240**

Seller enters:

AED 220

Invalid Price

If seller enters AED 270:

AED 270

⚠ Maximum permitted resale price is AED 240.

The frontend must never bypass Board 1 pricing rules.

AI Price Recommendation

Where enabled:

Recommended Price: AED 215

Supporting explanation:

Similar tickets for this performance are selling fastest between AED 205–220.

Allow:

Use Recommended Price

AI recommendation must remain within approved marketplace guardrails.

Demand Indicator

Where configured:

High Buyer Demand

or:

Moderate Demand

Avoid misleading guarantees that a ticket will sell.

Acceptance Condition

A seller can select a valid resale price while TICVAI automatically enforces the operator's configured commercial rules.

3.3.4 — Fees, Seller Proceeds & Listing Confirmation

Purpose

Provide complete financial transparency before the seller commits to publishing the listing.

This is essential to prevent later disputes.

Financial Summary

Example:

Your Selling Price

AED 220.00

Seller Marketplace Fee

– AED 22.00

Other Applicable Charges

– AED 0.00

Estimated Seller Proceeds

You will receive AED 198.00

Payout Timing

Clearly explain applicable settlement rules.

Example:

Expected payout: Within 3 business days after the event is completed.

or:

Payment becomes eligible after successful resale.

This consumes Board 2 settlement rules.

Seller Terms

Display/reference:

- Marketplace Terms
- Seller Terms
- Cancellation Policy
- Settlement Conditions
- Event Cancellation Treatment
- Applicable privacy notice

Required Confirmation

☒ I have reviewed and accept the Official Resale Marketplace Seller Terms.

Store the applicable terms/version acceptance.

Listing Summary

Before final submission:

Event: Museum Night

Seat: A18

Original Price: AED 200

Resale Price: AED 220

Fee: AED 22

Estimated Proceeds: **AED 198**

Primary Action

List My Ticket

Acceptance Condition

The seller understands the resale price, applicable fees, estimated proceeds and settlement conditions before submitting the ticket for listing.

3.3.5 — My Resale Listings & Seller Dashboard

Purpose

Give sellers a dedicated self-service workspace to manage their resale activity after publishing.

Seller KPIs

Display:

- Active Listings
- Pending Approval
- Sold
- Expiring Soon
- Seller Proceeds
- Pending Settlement
- Paid Settlements

Listing Cards/Table

Each listing shows:

- Event
- Date
- Seat
- Listing Price
- Original Price
- Marketplace Status
- Views where applicable
- Listing Date
- Expiry
- Seller Proceeds
- Settlement Status

Statuses

Customer-friendly statuses:**Pending Review****Live****Reserved by Buyer****Sold****Expired****Withdrawn****Suspended****Seller Actions****According to policy:**

- View Listing
- Edit Price
- Accept AI Price Recommendation
- Withdraw
- Relist
- View Sale
- View Settlement
- Contact Support

Important Transaction Lock**Once:****Reserved by Buyer**

the seller should not be allowed to perform actions that could corrupt the buyer's active checkout.

Sold Experience**Show:****SOLD ✓**

Selling Price: AED 220

Estimated Proceeds: AED 198

Settlement: Scheduled after event

Do not expose unnecessary buyer personal information.

Acceptance Condition

Sellers can independently understand and manage the complete status of their listings and settlements without contacting venue support for routine actions.

3.3.6 — Official Resale Marketplace & Buyer Discovery

Purpose

Provide buyers with a trusted client-branded marketplace for discovering authentic resale inventory.

Two Supported Discovery Models

TICVAI should support both.

Integrated Discovery

Primary and resale tickets appear together:

Official Tickets + Official Resale

Dedicated Marketplace

Client may provide:

Official Ticket Exchange

as a separate marketplace page.

Search & Filters

Support:

- Event
- Venue
- Date
- Performance
- Ticket Type
- Section
- Price
- Quantity
- Accessibility
- Resale only
- Primary only

Listing Card

Display:

Museum Evening Admission

19 September • 7 PM

Section A • Row 4 • Seat 18

OFFICIAL RESALE

AED 220

Trust Messaging

Prominently communicate:

Verified Official Resale

and, where appropriate:

Tickets purchased here are validated and transferred through the venue's official ticketing platform.

Seller Privacy**Do not expose seller:**

- Name
- Email
- Mobile
- Address
- Payment information

unless there is a legitimate separately configured requirement.

AI Recommendations**Where permitted, buyers may receive recommendations based on:**

- Price
- Seat quality
- Availability
- Quantity
- Customer requirements

Acceptance Condition

Customers can discover legitimate resale inventory in a trusted marketplace without interacting directly with unknown sellers.

3.3.7 — Resale Ticket Detail, Seat Selection & Primary-vs-Resale Experience

Purpose

Allow customers to understand exactly what they are purchasing and distinguish resale inventory from primary inventory.

Reserved Seating

Integrate with TICVAI Seat Map.

Example:**Standard Available****Official Resale****Selected****Unavailable**

Backend inventory types remain distinct even if shown on one map.

Ticket Detail**Display:**

- Event
- Venue
- Performance
- Ticket Type
- Section
- Row
- Seat
- Accessibility attributes
- Applicable benefits
- Resale Price
- Fees
- Applicable restrictions

Price Transparency

Where permitted/configured:

Original Face Value: AED 200

Official Resale Price: AED 220

Primary vs Resale

If primary inventory exists:

Primary

AED 210

Official Resale

AED 195

The customer can choose.

Important Commercial Benefit

This gives TICVAI the opportunity to optimize across:

Primary Inventory + Resale Inventory

while maintaining their backend distinction.

Listing Availability

Before proceeding, TICVAI must revalidate that the listing remains active and available.

Acceptance Condition

Buyers clearly understand whether a ticket is primary or resale inventory, its location/entitlements and the complete applicable price before checkout.

3.3.8 — Buyer Checkout, Inventory Hold & Secure Payment

Purpose

Provide a normal, secure TICVAI checkout while protecting the resale listing from simultaneous purchase.

Checkout Sequence

Select Resale Ticket

↓

Temporary Inventory Lock

↓

Customer Identification

↓

Checkout

↓

Payment

↓

Ownership Transfer

Inventory Hold

Display:

Ticket reserved for you

07:42 remaining

Board 2 controls the actual inventory lock.

Customer Information

Use existing customer profile where authenticated.

Otherwise collect required:

- Name
- Email
- Mobile
- Billing details
- Required participant information

Order Summary

Example:

Official Resale Ticket — AED 220

Buyer Service Fee — AED 12

Tax — AED X

Total

AED 232

Payment

Consume TICVAI's central Payment Engine rather than creating a separate resale payment architecture.

Failure**If payment fails:**

Retry Payment

The listing remains locked only according to the configured hold period.

After expiry:

Listing automatically returns to available inventory.

No Seller Interaction

The buyer must **never be required to pay or contact the seller directly**.

Acceptance Condition

One buyer can securely purchase the resale ticket while TICVAI prevents concurrent purchase and maintains complete transaction integrity.

3.3.9 — Resale Confirmation, Ownership Transfer & Ticket Delivery**Purpose**

Provide the customer-facing completion experience after successful payment while the backend performs the secure entitlement transfer.

Buyer Experience**Immediately after payment:****Purchase Confirmed**

We're securely transferring the ticket to your account.

Possible transitional state:**Transfer in Progress****followed by:****Your Ticket Is Ready ✓****Backend Sequence****The UI consumes Board 2 orchestration:**

Payment Confirmed

↓

Original Virtual Ticket Locked

↓

Ownership Transferred

↓

Seller Credential Bindings Revoked

Buyer Credential Bindings Generated

Access Control Synchronized

Buyer Ticket Delivered

Virtual Ticket Principle

The resale transaction must not create additional admission capacity.

Conceptually:

Before

VT-009821

Current Owner: Seller A

After

VT-009821

Previous Owner: Seller A

Current Owner: Buyer B

The entitlement/capacity position remains the same.

New Buyer Media

Depending on Area 15 configuration, offer:

- Dynamic QR
- Mobile Ticket
- Apple Wallet
- Google Wallet
- RFID/NFC assignment where applicable
- Other supported credential media

Seller Experience

Seller receives:

Your ticket has been sold.

and:

Settlement Status: Pending

Seller's old active credentials must no longer provide valid admission after successful transfer.

Buyer Actions

- View Ticket
- Add to Wallet
- Download where permitted
- View Order
- View Venue Information

Acceptance Condition

After successful resale, the buyer receives control of the valid entitlement and applicable credentials, while the seller can no longer use the transferred ticket.

3.3.10 — White-Label Marketplace Deployment & Experience Architecture

Purpose

This is the **key architecture/configuration screen**

It defines how each TICVAI client chooses to expose the resale marketplace to its customers.

Deployment Model A — Embedded White-Label

Architecture

Client B2C / Customer Portal

My Account → My Tickets → Resell

↓

TICVAI White-Label Experience Components

↓

TICVAI Marketplace Engine

Configuration

Support:

- Embedded pages/components
- Client navigation
- Client authentication
- SSO/session passing
- Client branding
- Domain configuration
- Analytics
- Localization
- Deep linking
- Mobile responsive behavior

Recommended Use

This should be the **default TICVAI deployment model**.

Deployment Model B — TICVAI-Hosted White-Label Marketplace

Architecture

Client Website

Official Resale

TICVAI-Hosted Secure Marketplace

TICVAI Marketplace Engine

Client Configuration

Configure:

- Marketplace Name
- Client Logo
- Brand Colors
- Typography
- Domain/Subdomain
- Support Contact
- Legal Links
- Seller Terms
- Buyer Terms
- Privacy
- Languages
- Authentication method

Domain

Support appropriate approaches such as:

resale.clientdomain.com

or TICVAI-hosted branded routing where required.

Recommended Use

For clients that want a complete marketplace without developing their own frontend.

Deployment Model C — Headless / API

Architecture

Client Website / App

TICVAI Marketplace APIs / SDK

TICVAI Marketplace Engine

API Capabilities

Expose governed APIs/services for:

- Resellable Tickets
- Eligibility
- Create Listing
- Update Listing
- Withdraw Listing
- Search Listings
- Listing Details
- Pricing
- Fees
- Checkout
- Inventory Hold
- Purchase
- Transaction Status
- Seller Settlement Status

Recommended Use

For large enterprise clients wanting full control over UX.

Experience Configuration

Regardless of deployment model, configure:

Branding

- Logo
- Marketplace name
- Primary/secondary brand assets
- Typography
- Imagery
- Email branding

Authentication

- TICVAI Customer Account
- Client SSO
- Passwordless
- OTP
- Mobile App Authentication
- Other approved identity provider

Navigation

Configure:

- My Tickets

- Sell
- Buy
- My Listings
- Transactions
- Settlements
- Help

Localization

Support:

- English
- Arabic RTL
- Additional client languages

Security

Support:

- Secure sessions
- Authentication
- Authorization
- Rate limiting
- Bot protection where applicable
- Fraud integration
- Data protection
- Session expiry
- Audit logging

Client Isolation

A customer browsing:

Museum A Official Resale

must not accidentally see:

Theme Park B resale inventory

unless TICVAI later deliberately introduces a separately governed cross-client marketplace product.

Acceptance Condition

Each TICVAI tenant can deploy a secure, branded resale marketplace using embedded, hosted or headless architecture without requiring a separate marketplace backend implementation.

Board 3 — Final Screen Register

#	Customer / Experience Screen	Primary Responsibility
3.3.1	My Tickets & Resale Marketplace Entry	Seller marketplace entry
3.3.2	Resale Eligibility & Ticket Selection	Determine/select resellable tickets
3.3.3	Create Listing & Resale Price Selection	Seller price and listing
3.3.4	Fees, Seller Proceeds & Listing Confirmation	Seller financial transparency
3.3.5	My Resale Listings & Seller Dashboard	Seller self-service
3.3.6	Official Resale Marketplace & Buyer Discovery	Buyer marketplace
3.3.7	Resale Ticket Detail, Seat Selection & Primary-vs-Resale Experience	Buyer product/seat selection
3.3.8	Buyer Checkout, Inventory Hold & Secure Payment	Secure resale purchase
3.3.9	Resale Confirmation, Ownership Transfer & Ticket Delivery	Transfer and fulfillment
3.3.10	White-Label Marketplace Deployment & Experience Architecture	Embedded/Hosted/API deployment

Complete Ticket Resale Marketplace Architecture

We now have a much cleaner 3-board architecture:

Board 1 — Marketplace Configuration & Listing Management

Who can sell? What can they sell? At what price? With what fee?

Eligibility → Policy → Listing → Pricing → Fees → Approval → Inventory → Lifecycle → AI

Board 2 — Resale Transactions, Credential Transfer & Intelligence

What happens when somebody buys it?

Buyer → Payment/Hold → Ownership → Credential → Fraud → Capacity → Settlement → Exceptions → Audit → Analytics

Board 3 — White-Label Marketplace & Customer Experience

How do sellers and buyers actually use it?

My Tickets → Eligibility → Create Listing → Seller Proceeds → My Listings → Marketplace → Ticket/Seat → Checkout → New Ticket → Deployment

One important addition

We would put this statement prominently at the beginning of Board 3:

TICVAI shall provide the resale marketplace as a reusable white-label SaaS capability. A TICVAI client shall not be required to independently develop a resale portal in order to offer official ticket resale. The platform shall support embedded white-label, TICVAI-hosted white-label and headless/API deployment models while using the same centralized TICVAI Resale Marketplace Engine.

And I would put this immediately underneath:

TICVAI shall not facilitate uncontrolled peer-to-peer ticket exchange. Sellers and buyers shall transact through the official marketplace. TICVAI shall control eligibility, listing validity, inventory locking, payment orchestration, ownership transfer, credential invalidation/reissue and transaction audit without requiring direct buyer-to-seller communication or credential exchange.

That second statement is especially important because it defines **what kind of resale platform TICVAI is building** and prevents from interpreting this as a simple classifieds marketplace.

With Board 3, I would now consider the **Ticket Resale Marketplace fully defined at 3 Boards / 30 screens**: two backend boards plus one dedicated customer-experience/deployment board.
