0 Backend Screens

Board Objective

Board 1 establishes the **master partner-management layer** for organizations that distribute TICVAI inventory through B2B, reseller, travel-trade, corporate, affiliate, OTA, API, or other authorized distribution relationships.

This board answers:

Who is the partner? → What type of partner are they? → Where may they operate? → Who works for them? → What documentation do we have? → What permissions do they receive? → Which brands/venues are they associated with? → What is their onboarding status? → Who approved them? → Are they ready to transact?

The important architectural separation is:

Area 4 — Sales Channel Management manages the **distribution channel**.

Area 8 — Partner Management manages the **organization** using that channel.

For example, one B2B API channel could eventually support hundreds of separately governed reseller accounts.

Screen 8.1.1 — Partner Management Command Center

Purpose

Provide a centralized management dashboard for all B2B, reseller, OTA and distribution partners across the TICVAI ecosystem.

Executive KPIs

Display:

- Total Partners
- Active Partners
- Pending Onboarding
- Pending Approval
- Suspended Partners
- Expiring Agreements
- Documentation Issues
- Partners With Credit Holds
- Connected OTA/API Partners
- Partner Sales YTD
- Partner Revenue YTD
- High-Risk Partners

Partner Directory

Each partner record should display:

- Partner ID
- Trading Name
- Legal Entity
- Partner Type
- Country
- Territory
- Assigned Brand/Venue
- Commercial Owner
- Distribution Channel
- Account Status
- Onboarding Status
- Agreement Status
- Credit Status
- Integration Status
- Last Activity

Partner Status

Suggested lifecycle:

Lead → Application → Under Review → Approved → Configuration → Active → Restricted → Suspended → Terminated → Archived

Filters**Filter by:**

- Partner Type
- Country
- Territory
- Brand
- Venue
- Account Manager
- Status
- Agreement Status
- Credit Status
- Integration Type
- Risk

Quick Actions**Authorized users can:**

- Create Partner
- Review Application
- Approve
- Assign Account Manager
- Suspend
- Open Commercial Profile
- View Users
- View Documents
- View Performance

AI Capability

AI should prioritize accounts requiring attention.

Example:**Partner Attention Required**

Desert Travel LLC has an agreement expiring in 21 days and AED 184,000 of forward bookings.

Acceptance Condition

Authorized administrators can identify every partner, its business relationship, current status and outstanding actions from a single workspace.

Screen 8.1.2 — Partner Profile & Organization Setup

Purpose

Create the master business record for each external distribution partner.

Partner Types

Support configurable partner classifications such as:

- B2B Reseller
- Travel Agent
- Tour Operator
- OTA
- Corporate Customer
- Hotel/Concierge
- Destination Management Company
- Affiliate
- Wholesaler
- Distributor
- Government Partner
- School/Institution
- API Partner
- Internal Group Company

Organization Information

Capture:

- Partner ID
- Legal Entity Name
- Trading Name
- Partner Type
- Registration Number
- Tax/VAT Number
- Country
- City
- Registered Address
- Business Address
- Website
- Main Telephone
- General Email
- Preferred Language
- Default Currency

- Time Zone

Internal Ownership

Assign:

- Account Manager
- Commercial Manager
- Finance Owner
- Operational Owner
- Technical Owner

Parent/Child Relationships

Support partner hierarchy:

Global Partner

- UAE Entity
- Saudi Entity
- Qatar Entity

Or:

Tour Operator

- Branch
- Agent/Sub-agent

Account Classification

Allow internal tags such as:

- Strategic
- Key Account
- Standard
- New Partner
- High Volume
- VIP
- Restricted

AI Capability

AI can detect potential duplicate partner records based on company details.

Acceptance Condition

Each external partner has one governed master organization record that can be referenced by commercial, operational, finance and distribution processes.

Screen 8.1.3 — Partner Onboarding & Application Workflow

Purpose

Manage the complete journey from a new partner application through internal review and activation.

Onboarding Workflow

Recommended:

Application

- Business Verification
- Documentation
- Commercial Review
- Finance Review
- Technical Review where required
- Approval
- Configuration
- Activation

Application Configuration

Capture:

- Company information
- Requested partner type
- Markets
- Expected sales volume
- Requested products
- Requested venues
- Preferred distribution method
- Estimated annual business
- Contact information
- Billing requirements

Internal Review

Each department receives relevant tasks.

Commercial

- Business case
- Territory
- Expected volume

Finance

- Credit request
- Payment terms
- Tax information

Operations

- Product requirements
- Fulfillment requirements

Technical

- API/integration requirements

Workflow Configuration**Support:**

- Sequential approval
- Parallel approval
- Mandatory stage
- Optional stage
- SLA
- Escalation
- Reassignment
- Rejection
- Request More Information

AI Capability**AI can summarize applications:**

“New UAE tour operator requesting B2B Portal access for three attractions with projected annual volume of 18,000 tickets.”

Acceptance Condition

New partners cannot become commercially active until the configured onboarding and approval stages have been successfully completed.

Screen 8.1.4 — Partner Contacts & User Administration**Purpose**

Manage the individuals authorized to interact with TICVAI on behalf of each partner.

Contact Types**Support:**

- Primary Contact
- Commercial
- Reservations
- Finance
- Technical
- Operations
- Management
- Emergency Contact

Contact Information**Capture:**

- Name
- Position
- Department
- Email
- Mobile
- Telephone
- Language
- Time Zone
- Contact Type
- Status

B2B User Accounts

Create/manage users authorized to access TICVAI's B2B environment.

Configure:

- Username
- Email
- Partner
- Branch
- Role
- **Permissions**
- Sales Location
- Currency
- Language
- Status

Example Partner Roles

- Partner Administrator
- Booking Agent
- Supervisor
- Finance User
- Reporting User
- API Administrator

Security Controls

Support/reference:

- MFA
- Password policy
- SSO where available
- Login restrictions

- Account expiry
- Session controls

User Actions

Authorized administrators can:

- Invite
- Activate
- Disable
- Reset Access
- Reassign Role
- Revoke Access

Architecture

Authentication and enterprise authorization should consume TICVAI's central Identity/RBAC capabilities rather than implementing a separate security engine.

Acceptance Condition

Every external user accessing TICVAI on behalf of a partner is associated with a valid partner account and controlled through appropriate roles and permissions.

Screen 8.1.5 — Territory, Market & Distribution Rights

Purpose

Define **where and through what business scope a partner is authorized to distribute TICVAI products.**

Territory Configuration

Assign:

- Country
- Region
- City
- Market
- Venue
- Attraction
- Event
- Brand

Distribution Rights

Configure whether the partner may sell through:

- B2B Portal
- API
- OTA Connection

- Agent Portal
- Affiliate Link
- Voucher Distribution
- Other authorized channel

Example

Partner: Gulf Travel

Allowed:

- UAE
- Dubai
- B2B Portal
- API

Not allowed:

- Saudi market
- Direct consumer resale
- Sub-distribution

Exclusivity

Support:

- Non-exclusive
- Exclusive
- Preferred
- Restricted

Sub-Agent Rights

Configure:

- Sub-agents allowed
- Sub-agents prohibited
- Approval required
- Maximum hierarchy depth

Effective Dates

Every distribution right can have:

- Effective From
- Effective To
- Review Date

Conflict Detection

AI/system validation should identify overlapping exclusive rights.

Example:

Two partners are configured as exclusive distributors for the same market and product period.

Acceptance Condition

TICVAI can determine exactly which markets, brands, venues and distribution mechanisms each partner is authorized to use.

Screen 8.1.6 — Partner Brand, Venue & Business Scope Assignment

Purpose

Determine which TICVAI business entities the partner relationship covers.

This is deliberately separate from **product assignment**, which is governed through the Sales Channel and commercial configuration layers.

Business Scope

Assign:

- Tenant
- Brand
- Venue
- Attraction
- Business Unit
- Event Portfolio
- Market

Example

Emirates Tourism LLC

Authorized Business Scope:

Brand

- Dubai Experiences

Venues

- Dubai Arena
- City Museum

Not Authorized

- Abu Dhabi Waterpark

Scope Hierarchy

Support inheritance:

Tenant

- Brand
- Venue
- Attraction/Event

Scope Overrides

Allow controlled exceptions.

Example:

Partner receives all Dubai Arena events **except VIP Hospitality products**.

Product-level restrictions can then be consumed by the appropriate commercial/channel rule.

Effective Dates**Assignments should support:**

- Start Date
- End Date
- Temporary Assignment
- Seasonal Scope

Acceptance Condition

Every partner is associated only with the TICVAI brands, venues and business entities for which the commercial relationship has been approved.

Screen 8.1.7 — Partner Documentation & Compliance Repository

Purpose

Maintain required partner documentation and ensure that commercial accounts remain compliant.

Document Types**Support configurable documents such as:**

- Trade License
- Tax/VAT Certificate
- Commercial Registration
- Bank Details
- Insurance
- Signed Agreement
- NDA
- API Agreement
- Compliance Documents
- Identification of Authorized Signatory
- Other required documents

Document Record**Capture:**

- Document Type
- Document Number
- Issue Date
- Expiry Date
- Issuing Authority

- File
- Verification Status
- Verified By
- Verification Date
- Notes

Status

Use:

- Missing
- Uploaded
- Under Review
- Verified
- Rejected
- Expiring
- Expired

Expiry Monitoring

Example:

Trade License expires in 30 days.

Compliance Rules

Configure whether expiration should:

- Warn only
- Block new bookings
- Block credit transactions
- Suspend partner
- Require manual review

AI Capability

Where technically appropriate, AI can assist in extracting structured information from uploaded documents and identifying missing or inconsistent information.

Human verification remains required where governance demands it.

Acceptance Condition

TICVAI maintains a complete compliance-document record for each partner and can prevent or restrict commercial activity when mandatory documentation is missing or invalid.

Screen 8.1.8 — Partner Access, Roles & Permission Profile

Purpose

Control **what a partner organization is permitted to do**, beyond individual-user permissions.

Organization-Level Capabilities

Configure whether the partner may:

- Search Availability
- Create Booking
- Hold Inventory
- Confirm Booking
- Cancel Booking
- Modify Booking
- Download Ticket
- Print Ticket
- Send Ticket
- Access Customer Details
- Use Credit
- Use Payment Card
- View Commission
- View Net Rates
- Access Reports
- Export Data
- Use API
- Create Sub-Agents

Partner-Level vs User-Level**TICVAI should enforce:****Partner Permission Ceiling****User Role Permission****For example:**

If the partner itself is not authorized for refunds, no user belonging to that partner can receive refund permission.

Sensitive Functions**Functions such as:**

- Refund
- Manual price override
- Credit adjustment
- High-value booking
- Customer data export

may require additional internal approval.

Effective Dates

Permissions can be:

- Permanent
- Temporary
- Seasonal
- Event-specific

Acceptance Condition

Partner organizations can access only the capabilities authorized by TICVAI, regardless of permissions assigned to individual partner users.

Screen 8.1.9 — Partner Approval, Status & Lifecycle Management**Purpose**

Govern the complete business lifecycle of a partner after onboarding.

Lifecycle**Recommended:****Prospect**

- Applicant
- Under Review
- Approved
- Active

then potentially:

Restricted / Suspended / Terminated / Archived

Status Actions**Authorized users can:**

- Approve
- Activate
- Restrict
- Suspend
- Reactivate
- Terminate
- Archive

Status Reasons**Capture:**

- Commercial
- Compliance
- Credit
- Fraud

- Contract Expiry
- Performance
- Technical
- Management Decision

Suspension Scope

Support:

Full Suspension

or selected restrictions:

- Stop New Bookings
- Stop Credit Sales
- Stop API
- Stop Specific Venue
- Stop Specific Market

Impact Analysis

Before suspension/termination show:

- Future bookings
- Active holds
- Outstanding balance
- Pending settlement
- Active users
- Active integrations
- Existing customers/tickets
- Current allocations

Important Rule

Suspending a partner should **not automatically invalidate tickets already legitimately issued to customers.**

AI Capability

AI can summarize potential business impact before the administrator executes a material status change.

Acceptance Condition

Partner lifecycle changes are governed, effective-dated, auditable and do not unintentionally damage valid existing customer transactions.

Screen 8.1.10 — Partner 360° Profile, Readiness & AI Review

Purpose

Provide one consolidated **Partner 360** screen before activation and throughout the relationship.

This should become one of the most useful screens for TICVAI commercial management.

Partner 360 Header

Display:

Partner Name

Partner Type

Account Manager

Country

Status

Risk

Sales YTD

Outstanding Balance

360° Sections

Bring together:

Organization

Company information and hierarchy.

Contacts

Key partner contacts.

Users

Active B2B users.

Territories

Authorized markets.

Business Scope

Brands and venues.

Documentation

Compliance status.

Permissions

Authorized capabilities.

Commercial

Agreement/credit summary from Board 2.

Distribution

Connected channels from Area 4.

Performance

Summary from Board 3.

Readiness Score

Example:

Partner Readiness — 91%

- Organization: 100%
- Contacts: 100%
- Documentation: 85%
- Territory: 100%
- Permissions: 90%
- Commercial Agreement: 100%
- Credit: 75%
- Integration: 88%

AI Partner Review

AI can produce an executive summary:

Gulf Travel LLC — Recommended for Activation

Onboarding and commercial approval are complete. One secondary user has not activated MFA and the API production test remains pending. No critical blockers detected.

Or:

Activation Not Recommended

Trade license verification remains incomplete and requested credit exposure exceeds the currently approved limit.

Actions

Depending on authority:

- Approve Partner
- Activate
- Return for Changes
- Assign Action
- Restrict
- Schedule Review

Governance

AI may recommend a decision, but final partner approval/activation remains governed by configured human authorization.

Acceptance Condition

Before activation, authorized management can evaluate the partner's complete organizational, compliance, access, commercial and technical readiness from one consolidated view.

Board 1 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
8.1.1	Partner Management Command Center	Partner portfolio & status

Screen	Backend Screen	Primary Responsibility
8.1.2	Partner Profile & Organization Setup	Master partner record
8.1.3	Partner Onboarding & Application Workflow	Partner onboarding
8.1.4	Partner Contacts & User Administration	Contacts and B2B users
8.1.5	Territory, Market & Distribution Rights	Geographic/distribution authorization
8.1.6	Partner Brand, Venue & Business Scope Assignment	Organizational scope
8.1.7	Partner Documentation & Compliance Repository	Documentation/compliance
8.1.8	Partner Access, Roles & Permission Profile	Partner-level permissions
8.1.9	Partner Approval, Status & Lifecycle Management	Partner lifecycle governance
8.1.10	Partner 360° Profile, Readiness & AI Review	Consolidated partner intelligence

Board 1 Configuration Flow

The backend journey should feel like:

Create Partner → Build Organization Profile → Onboard → Add Contacts & Users → Define Territory → Assign Business Scope → Verify Documents → Set Permissions → Approve → Activate

Very important boundary for Board 2

We should **not put negotiated pricing, commission, credit limit, payment terms or contractual allocations into Board 1.**

Those belong together in:

Board 2 — Commercial Agreements, Credit & Allocation Management

That board will cover the financial/commercial relationship:

Agreement → Contract Terms → Rate/Commission → Credit → Deposit/Guarantee → Payment Terms → Commercial Allocation → Booking Quotas → Commercial Approval → Agreement 360

This separation will give Development team a much cleaner architecture: **Board 1 defines who the partner is and what they are authorized to access; Board 2 defines the commercial terms under which they can transact.**

Board 2 — Commercial Agreements, Credit & Allocation Management

10 Backend Screens

Board Objective

Board 1 established **who the partner is** and **what they are authorized to access**.

Board 2 establishes the **commercial rules** under which **that partner can transact with TICVAI**.

It answers:

What agreement governs the partner? → What rates do they receive? → What commission do they earn? → How can they pay? → How much credit can they use? → What security/deposit is required? → What inventory is commercially committed? → What booking limits apply? → Who approves commercial exceptions? → Is the commercial relationship healthy?

The architecture should deliberately avoid duplicating Pricing, Finance, Inventory, or Sales Channel engines. This board stores and governs the **partner-specific commercial agreement**, while those platform engines execute the approved terms.

Screen 8.2.1 — Commercial Agreement Command Center

Purpose

Provide commercial and finance teams with a centralized view of all partner agreements and their current commercial health.

Executive KPIs

Display:

- Active Agreements
- Draft Agreements
- Pending Approval
- Agreements Expiring Soon
- Expired Agreements
- Partners on Credit Hold
- Total Approved Credit
- Current Credit Exposure
- Outstanding Receivables
- Active Commercial Allocations
- Agreements With Exceptions
- Commercial Risk Alerts

Agreement Directory

Each agreement should show:

- Agreement ID
- Partner
- Agreement Type
- Brand/Venue
- Market
- Effective From
- Effective To
- Pricing Model
- Commission Model
- Payment Terms
- Credit Limit
- Current Exposure
- Allocation Model
- Agreement Status
- Commercial Owner

Agreement Status

Recommended:

Draft → Negotiation → Internal Review → Partner Review → Pending Approval → Approved → Scheduled → Active → Expiring → Expired → Terminated → Archived

Filters

Filter by:

- Partner
- Partner Type
- Brand
- Venue
- Country
- Agreement Type
- Status
- Commercial Owner
- Expiry
- Credit Status
- Risk

AI Capability

AI should prioritize commercial issues.

Example:

Commercial Risk: Gulf Travel's agreement expires in 18 days with AED 640,000 of future bookings and no renewal workflow initiated.

Acceptance Condition

Commercial management can understand the status, exposure, expiry and major commercial terms of every partner agreement from one central workspace.

Screen 8.2.2 — Agreement & Contract Terms Builder

Purpose

Create the structured commercial agreement governing the partner relationship.

Agreement Information

Configure:

- Agreement ID
- Agreement Name
- Partner
- Agreement Type
- Contract Reference
- Legal Entity
- Brand
- Venue
- Territory

- Currency
- Effective From
- Effective To
- Renewal Type
- Commercial Owner
- Finance Owner

Agreement Types

Examples:

- Reseller Agreement
- OTA Agreement
- Travel Trade Agreement
- Corporate Agreement
- Wholesale Agreement
- Affiliate Agreement
- Distribution Agreement
- API Commercial Agreement

Contract Terms

Configure/reference:

- Payment Terms
- Commission Terms
- Pricing Basis
- Credit Terms
- Allocation Terms
- Cancellation Conditions
- Refund Conditions
- Booking Restrictions
- Settlement Terms
- Minimum Commitment
- Sales Target

Renewal

Support:

- Manual Renewal
- Auto-Renewal
- Renewal Notice Period
- Renegotiation Required
- Renewal Approval

Document Association

Link the structured agreement to:

- Signed Contract
- Addendum
- Rate Sheet
- SLA
- NDA
- Commercial Annex

Versioning

Contract amendments should create versions rather than overwriting historical terms.

Example:

Agreement v1.0 → Addendum → Agreement v1.1

Acceptance Condition

TICVAI maintains a structured, effective-dated and version-controlled commercial agreement for every governed partner relationship.

Screen 8.2.3 — Partner Rate & Net Pricing Configuration

Purpose

Define the commercial pricing basis available to a partner without recreating TICVAI's Pricing Engine.

Pricing Models

Support:

Retail Price

Partner sells at standard retail price.

Net Rate

Partner purchases at a negotiated net rate.

Discount From Retail

Example:

Retail Price – 15%

Markup Model

Partner receives a base rate and applies permitted markup.

Dynamic/Derived Rate

Partner rate derives from an approved pricing profile.

Rate Assignment

Configure by:

- Partner

- Agreement
- Product
- Product Family
- Venue
- Event
- Ticket Type
- Price Category
- Market
- Channel

Example

Product	Public Rate	Partner Net Rate
Adult Admission	AED 200	AED 165
Child Admission	AED 150	AED 125
VIP Admission	AED 500	AED 425

Effective Dating

Each rate supports:

- Effective From
- Effective To
- Blackout Dates
- Event Exceptions
- Seasonal Rate

Rate Hierarchy

Recommended:

Standard Price

→ **Partner Type Rate**

→ **Partner Agreement Rate**

→ **Product/Event Exception**

Guardrails

Control:

- Minimum permitted rate
- Maximum discount
- Margin floor

- Manual override
- Approval threshold

Architecture

The Pricing Engine calculates the actual transaction price.

Board 2 determines which approved **partner commercial rate/profile** applies.

AI Capability

AI can detect margin erosion or inconsistent rates.

Example:

This partner's VIP net rate is 8% below the approved minimum commercial margin.

Acceptance Condition

TICVAI can apply partner-specific negotiated pricing while retaining the central Pricing Engine as the authoritative calculation service.

Screen 8.2.4 — Commission, Margin & Incentive Management

Purpose

Configure how partner commissions and commercial incentives are calculated.

Commission Models

Support:

- Fixed Percentage
- Fixed Amount
- Product-Specific Commission
- Tiered Commission
- Volume-Based Commission
- Revenue-Based Commission
- Performance Incentive
- Campaign Incentive

Example Tier

Monthly Sales

0–1,000 tickets → **8%**

1,001–5,000 → **10%**

5,001+ → **12%**

Configuration Dimensions

Define commission by:

- Partner
- Agreement
- Product

- Product Category
- Venue
- Event
- Market
- Sales Channel
- Period

Incentives

Support:

- Volume Bonus
- Growth Bonus
- Target Achievement
- Seasonal Incentive
- New Product Incentive
- Strategic Partner Bonus

Margin Visibility

Commercial administrators should see:

Retail Price

- Partner Rate
 - Commission/Incentive
 - Applicable Commercial Cost
- = Estimated Net Contribution

Conflict Detection

Detect overlapping commission rules.

AI Capability

AI can analyze whether higher commission is generating incremental sales.

Example:

Increasing this partner's commission from 10% to 12% produced 4% higher volume but reduced net contribution by 7%.

Acceptance Condition

Partner commissions and incentives can be calculated using governed, effective-dated rules with clear visibility of commercial impact.

Screen 8.2.5 — Credit Limit & Exposure Management

Purpose

Control the financial exposure TICVAI permits for partners buying on account.

This should be one of the strongest finance-control screens in the B2B module.

Credit Profile

Configure:

- Credit Enabled
- Approved Credit Limit
- Currency
- Temporary Credit Limit
- Effective Dates
- Credit Owner
- Risk Classification
- Approval Authority

Real-Time Exposure

Display:

Approved Credit Limit: AED 500,000

Open Invoices: AED 210,000

Unbilled Transactions: AED 95,000

Active Holds/Reservations: AED 40,000

Available Credit: AED 155,000

Credit Utilization

Display percentage:

69% utilized

Thresholds

Configure:

- Warning at 70%
- High Risk at 90%
- Block at 100%

Credit Actions

Authorized users can:

- Increase Limit
- Reduce Limit
- Temporary Increase
- Place Credit Hold
- Release Hold
- Block Credit Transactions

Temporary Credit

Example:

Increase credit from AED 500K → AED 750K until 31 December for peak-season bookings.

This should require approval.

Booking Validation

Before confirming a credit transaction:

Transaction Amount + Existing Exposure ≤ Available Credit

unless an approved exception exists.

AI Capability

AI can forecast likely credit pressure based on bookings, payment behavior and seasonality.

Acceptance Condition

TICVAI prevents unauthorized partner credit exposure beyond approved limits while providing real-time visibility of available and utilized credit.

Screen 8.2.6 — Deposit, Guarantee & Financial Security Management

Purpose

Manage financial security required to support partner credit or commercial access.

Security Types

Support:

- Cash Deposit
- Bank Guarantee
- Security Deposit
- Letter of Credit
- Prepayment Balance
- Corporate Guarantee
- Other Approved Security

Security Record

Capture:

- Security ID
- Partner
- Agreement
- Type
- Amount
- Currency
- Issuing Institution
- Reference
- Effective Date
- Expiry Date
- Document

- Verification Status

Coverage Analysis

Display:

Credit Exposure: AED 500,000

Guarantee: AED 300,000

Unsecured Exposure: AED 200,000

Alerts

Examples:

Bank Guarantee expires in 21 days.

Current credit exposure exceeds verified financial security.

Rules

Configure whether an expired guarantee:

- Generates warning
- Reduces credit
- Blocks new credit sales
- Places partner on hold
- Requires finance review

Acceptance Condition

Finance can track all financial securities supporting partner exposure and automatically enforce configured controls when security becomes insufficient or expires.

Screen 8.2.7 — Payment Terms, Billing & Account Configuration

Purpose

Define how the partner pays TICVAI and how transactions are financially grouped.

Payment Models

Support:

- Immediate Payment
- Prepaid
- Credit Account
- Deposit Balance
- Monthly Invoice
- Weekly Invoice
- Per-Transaction Billing
- Consolidated Billing

Payment Terms

Examples:

- Due Immediately
- Net 7
- Net 15
- Net 30
- Net 45
- Custom

Billing Configuration

Configure:

- Billing Entity
- Billing Currency
- Invoice Frequency
- Invoice Grouping
- Tax Profile
- Purchase Order Required
- Statement Frequency
- Billing Contact
- Finance Email

Payment Methods

Allow/reference:

- Credit Account
- Bank Transfer
- Card
- Payment Link
- Prepaid Balance
- Other approved method

Account Status

Show:

- Current Balance
- Outstanding
- Overdue
- Available Credit
- Last Payment
- Next Invoice
- Oldest Outstanding Invoice

Important Boundary

This screen defines **partner billing terms**.

Invoice generation, ledger posting, receipts and accounting remain owned by TICVAI Finance.

Acceptance Condition

Every partner transaction can be routed to the correct approved payment and billing model based on its commercial agreement.

Screen 8.2.8 — Commercial Allocation, Quota & Commitment Management

Purpose

Define the **commercial commitment** of inventory to a partner.

This differs from Area 4's operational channel allocation.

Area 4 asks:

"How much inventory is currently available through this channel?"

This screen asks:

"What inventory has TICVAI contractually committed to this specific partner?"

Allocation Models

Support:

- Guaranteed Allocation
- On-Request Allocation
- Shared Allocation
- Fixed Quantity
- Percentage Allocation
- Rolling Allocation
- Seasonal Allocation

Configuration

Define:

- Partner
- Agreement
- Venue
- Event
- Product
- Ticket Type
- Quantity
- Minimum Commitment
- Maximum Allocation
- Release Date
- Return Rule

- Sell-Through Target

Example

Partner: Gulf Travel

Event Capacity: 10,000

Contractual Allocation: **800**

Minimum Commitment: **500**

Release Deadline: **48 hours before event**

Commitment Rules

Support:

- Use-it-or-release-it
- Take-or-pay where commercially applicable
- Guaranteed minimum
- Automatic release
- Manual release

Performance

Display:

- Allocated
- Booked
- Sold
- Returned
- Remaining
- Utilization
- Commitment Achievement

Integration

Approved commercial allocation feeds the operational inventory/capacity controls in **Area 4**.

AI Capability

AI can identify underutilized contractual allocation.

Example:

Partner has sold only 24% of its guaranteed allocation with five days remaining. 420 units are forecast to remain unused.

Acceptance Condition

TICVAI can enforce partner-specific contractual inventory commitments while synchronizing permitted availability with central capacity management.

Screen 8.2.9 — Booking Limits, Commercial Exceptions & Approval

Purpose

Control transaction limits and provide a governed mechanism for commercial exceptions.

Booking Limits

Configure:

- Maximum Tickets Per Booking
- Maximum Booking Value
- Daily Booking Limit
- Monthly Booking Limit
- Event Limit
- Product Limit
- Hold Limit
- Reservation Duration
- Cancellation Limit

Commercial Thresholds

Examples:

- Discount > 15% requires approval.
- Booking > AED 100,000 requires approval.
- Credit utilization > 90% requires finance approval.
- Allocation increase > 20% requires commercial approval.

Exception Types

Support:

- Price Exception
- Credit Exception
- Allocation Exception
- Commission Exception
- Booking Limit Exception
- Payment-Term Exception
- Cancellation Exception

Exception Request

Capture:

- Partner
- Agreement
- Request Type
- Current Rule
- Requested Exception

- Amount/Impact
- Reason
- Effective Period
- Requester

Approval Workflow

Example:

Account Manager

→ **Commercial Director**

→ **Finance**

→ **Final Approval**

depending on exception type/value.

AI Impact Summary

AI can explain:

Requested credit exception increases unsecured exposure from AED 180K to AED 380K for 14 days. The partner has no overdue invoices during the previous six months.

AI should inform—not approve.

Acceptance Condition

Transactions outside standard partner commercial rules cannot proceed without the appropriate documented exception and approval.

Screen 8.2.10 — Commercial Agreement 360°, Health & AI Review

Purpose

Give management a single consolidated view of the complete commercial relationship with a partner.

Agreement 360 Header

Display:

Partner

Agreement

Commercial Owner

Effective Period

Status

Commercial Health

Risk

Commercial Summary

Bring together:

Agreement

- Contract status
- Effective dates
- Renewal

Pricing

- Rate model
- Average discount

Commission

- Current commission
- Incentives

Credit

- Limit
- Exposure
- Available credit

Financial Security

- Deposit/guarantee
- Expiry

Billing

- Payment terms
- Outstanding balance
- Overdue amount

Allocation

- Contractual allocation
- Utilization

Commitments

- Minimum sales
- Achievement

Exceptions

- Active approved exceptions

Commercial Health Score**Example:****Commercial Health — 86/100**

- Agreement: 100%
- Margin: 82%
- Credit: 75%
- Payment: 92%
- Security: 100%

- Allocation: 68%
- Commitment: 81%

AI Executive Review

Example:

Commercial Health: Good

Gulf Travel remains within approved credit limits and has no overdue balance. Allocation utilization is below target for two upcoming events. The current agreement expires in 42 days and renewal should begin within the next two weeks.

AI Recommendations

Potential recommendations:

- Review rate
- Increase/reduce credit
- Rebalance allocation
- Renew agreement
- Review commission
- Request updated guarantee
- Reduce unused commitment
- Place partner under review

Scenario Simulation

Management should be able to simulate questions such as:

“What happens if we increase commission from 10% to 12%?”

or:

“What happens if we increase their credit limit by AED 250,000?”

TICVAI can estimate:

- Revenue impact
- Margin impact
- Credit exposure
- Expected sales
- Risk

Actions

Authorized users can:

- Start Renewal
- Request Commercial Review
- Change Terms
- Request Credit Review
- Create Exception

- Suspend Commercial Access

Acceptance Condition

Management can evaluate the complete commercial relationship, financial exposure, performance and upcoming risks from a single Partner Commercial 360 workspace.

Board 2 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
8.2.1	Commercial Agreement Command Center	Agreement portfolio & commercial risk
8.2.2	Agreement & Contract Terms Builder	Contract configuration/versioning
8.2.3	Partner Rate & Net Pricing Configuration	Negotiated partner pricing
8.2.4	Commission, Margin & Incentive Management	Commission/incentive rules
8.2.5	Credit Limit & Exposure Management	Credit governance
8.2.6	Deposit, Guarantee & Financial Security Management	Financial security
8.2.7	Payment Terms, Billing & Account Configuration	Partner payment/billing model
8.2.8	Commercial Allocation, Quota & Commitment Management	Contractual inventory commitments
8.2.9	Booking Limits, Commercial Exceptions & Approval	Limits and exception governance
8.2.10	Commercial Agreement 360°, Health & AI Review	Commercial relationship intelligence

Critical architecture distinction

There are three similar-looking concepts that development team should **not merge**:

Partner Commercial Allocation — Area 8

“What inventory did we contractually promise Gulf Travel?”

↓

Channel Allocation — Area 4

“How much inventory is currently distributed through B2B/API/OTA channels?”

↓

Core Capacity Engine

“How much inventory actually exists and can legally be sold?”

For example:

Venue Capacity: 10,000 → Gulf Travel contractual allocation: 800 → delivered through B2B API → 520 sold → 280 remaining/releasable.

That separation will prevent one of the biggest architectural problems in a multi-channel ticketing platform: mixing **contractual entitlement, distribution availability and physical capacity**.

After Board 2 design, **Board 3 should be Partner Operations, Settlement & AI Performance**, covering live partner orders, cancellations, statements, reconciliation, commission settlement, disputes, partner service operations, performance scorecards, risk monitoring and AI partner intelligence.

Board 3 — Partner Operations, Settlement & AI Performance

10 Backend Screens

Board Objective

Board 3 manages the **day-to-day operational and financial relationship with active B2B, reseller and OTA partners.**

The three boards now form a clean lifecycle:

Board 1 — Who is the partner?

Onboarding → Organization → Users → Territory → Compliance → Permissions → Activation

Board 2 — Under what commercial terms can they transact?

Agreement → Rates → Commission → Credit → Security → Billing → Allocation → Limits

Board 3 — What happens once the partner starts doing business?

Orders → Reservations → Cancellations → Statements → Reconciliation → Commission Settlement → Disputes → Performance → Risk → AI Optimization

A key principle for Board 3 is that it should provide a **Partner Operations 360°** without rebuilding functionality already owned by Orders, Finance, Ticketing, Payment or Channel Management.

Screen 8.3.1 — Partner Operations Command Center

Purpose

Provide commercial, operations and finance teams with one real-time view of active B2B, reseller and OTA business.

Executive KPIs

Display:

- Partner Sales Today
- Partner Sales MTD
- Active Partner Orders
- Active Reservations/Holds
- Tickets Sold
- Cancellations
- Refunds
- Outstanding Receivables
- Commission Payable

- Pending Settlements
- Operational Exceptions
- Partners Requiring Attention

Partner Operations Table

Each partner should show:

- Partner
- Partner Type
- Account Manager
- Orders
- Tickets
- Gross Sales
- Net Sales
- Commission
- Outstanding Balance
- Credit Utilization
- Allocation Utilization
- Cancellation Rate
- Operational Status
- Risk

Activity Feed

Examples:

Gulf Travel created B2B order #B2B-104892 — AED 18,500.

Desert Adventures cancelled 24 tickets for Dubai Arena.

OTA Partner A reached 90% of its contractual allocation.

City Tours exceeded its configured cancellation threshold.

Filters

Filter by:

- Partner
- Partner Type
- Venue
- Event
- Market
- Account Manager
- Channel
- Date
- Operational Status

- Risk

AI Capability

AI should prioritize issues based on business impact.

Example:

Attention Required: City Tours' cancellation rate increased from 8% to 27% during the last seven days, affecting AED 186,000 of bookings.

Acceptance Condition

Authorized users can understand current partner activity, financial exposure and operational exceptions from one centralized workspace.

Screen 8.3.2 — Partner Orders & Booking Management

Purpose

Provide a consolidated operational view of orders created by each partner.

Order Search

Search/filter by:

- Partner
- Partner Order Reference
- TICVAI Order ID
- Event
- Venue
- Product
- Booking Date
- Visit/Event Date
- Status
- Agent
- Channel

Order Record

Display:

- TICVAI Order ID
- Partner Reference
- Partner
- Agent/User
- Customer/Guest where applicable
- Booking Date
- Event
- Products

- Quantity
- Gross Value
- Partner Rate
- Commission
- Net Amount
- Payment Method
- Billing Status
- Fulfillment Status

Order Status

Support/reference:

Draft / Held / Confirmed / Partially Fulfilled / Fulfilled / Cancelled / Refunded / Failed

Operational Actions

Subject to permission:

- View
- Modify
- Cancel
- Rebook
- Resend Tickets
- Reissue
- Add Internal Note
- Escalate
- Open Financial Record

Commercial Validation

Before modifications, TICVAI should revalidate:

- Agreement
- Product eligibility
- Rate
- Allocation
- Credit
- Booking limit
- Cancellation policy

Important Architecture

The actual order remains owned by TICVAI's **Order Management service**.

This screen provides the partner-specific operational view.

Acceptance Condition

Operations can locate and service any partner transaction while preserving central order and commercial-rule integrity.

Screen 8.3.3 — Reservations, Holds & Release Management

Purpose

Manage inventory temporarily reserved by B2B partners before final confirmation.

This is particularly important for tour operators, corporate groups and travel-trade partners.

Hold Dashboard

Display:

- Active Holds
- Held Tickets
- Held Value
- Expiring Today
- Expired Holds
- Converted Holds
- Released Inventory

Hold Record

Capture/reference:

- Hold ID
- Partner
- Event
- Product
- Quantity
- Seat/Zone where applicable
- Hold Created
- Hold Expiry
- Created By
- Commercial Value
- Allocation Source
- Status

Hold Rules

Consume configured rules from Board 2:

- Maximum Hold Quantity
- Hold Duration
- Number of Extensions
- Partner Hold Limit

- Event Cutoff
- Approval Requirement

Operational Actions

Authorized users can:

- Extend Hold
- Reduce Hold
- Release Hold
- Convert to Booking
- Reassign where permitted
- Escalate

Automatic Release

When a hold expires:

Held Inventory → Automatically Returned to Applicable Capacity Pool

unless an approved extension exists.

AI Capability

AI can identify inefficient inventory blocking.

Example:

Gulf Travel has held 280 tickets for 19 hours with a historical conversion probability of only 21%. Consider releasing part of the inventory.

Acceptance Condition

Partner reservations and holds cannot indefinitely block sellable capacity and are automatically governed by configured duration, allocation and approval rules.

Screen 8.3.4 — Partner Cancellations, Refunds & Amendments

Purpose

Manage post-booking changes according to the partner's commercial agreement and product policies.

Supported Requests

- Full Cancellation
- Partial Cancellation
- Date Change
- Performance Change
- Quantity Reduction
- Product Change
- Ticket Reissue
- Customer Name Change where permitted

- Refund Request

Policy Evaluation

TICVAI should determine:

Product Policy

-

Partner Agreement

-

Channel Rule

-

Transaction Context

→ **Permitted Action**

Example

Partner requests cancellation of 50 tickets.

TICVAI displays:

- Original Value: AED 10,000
- Cancellation Allowed: Yes
- Cancellation Fee: AED 1,000
- Refund/Credit: AED 9,000
- Allocation Impact: +50 returned
- Commission Adjustment: -AED 900

Approval

Certain amendments may require approval based on:

- Transaction value
- Event proximity
- Cancellation percentage
- Partner status
- Exception request

Audit

Every amendment should retain:

- Original state
- New state
- User
- Reason
- Financial impact
- Approval

AI Capability

AI can flag unusual cancellation patterns.

Acceptance Condition

Partner booking changes are processed according to applicable commercial and product policies with complete financial and inventory impact visibility.

Screen 8.3.5 — Partner Statement & Account Activity

Purpose

Give finance and commercial teams a complete financial statement for each partner account.

Account Summary

Display:

- Opening Balance
- Sales
- Payments
- Credits
- Refunds
- Commission
- Adjustments
- Closing Balance
- Overdue Balance
- Available Credit

Statement Ledger

Each line should show:

- Date
- Transaction Type
- Reference
- Order/Invoice
- Debit
- Credit
- Running Balance
- Due Date
- Status

Transaction Types

Examples:

- Booking
- Invoice
- Payment

- Refund
- Credit Note
- Commission
- Manual Adjustment
- Deposit
- Settlement

Statement Period

Generate by:

- Daily
- Weekly
- Monthly
- Custom Date Range

Aging

Display:

- Current
- 1–30 Days
- 31–60 Days
- 61–90 Days
- 90+ Days

Partner Access

Where authorized, the B2B partner should be able to view/download its own statement.

Architecture

Accounting entries remain owned by the Finance module.

This screen provides a **partner-centric financial view**.

Acceptance Condition

Finance and authorized partner users can reconcile all commercial account activity against a clear running balance and supporting transaction references.

Screen 8.3.6 — Partner Reconciliation & Exception Management

Purpose

Reconcile operational bookings against financial and channel records and identify discrepancies.

Reconciliation Sources

Compare:

Partner Orders

↔ **TICVAI Orders**

↔ **Tickets Issued**

↔ **Partner Rates**

↔ **Payments/Credit**

↔ **Commission**

↔ **Invoices**

↔ **Cancellations/Refunds**

Reconciliation Dashboard

Display:

- Records Reconciled
- Unmatched Orders
- Amount Mismatches
- Missing Tickets
- Pricing Differences
- Commission Differences
- Payment Differences
- Pending Investigation

Example

Partner Reference OTA-82714

Partner Amount: AED 12,450

TICVAI Amount: AED 12,600

Difference: AED 150

Exception Types

- Missing Transaction
- Duplicate Transaction
- Price Mismatch
- Quantity Mismatch
- Tax Mismatch
- Commission Mismatch
- Payment Mismatch
- Cancellation Mismatch
- Settlement Mismatch

Resolution Workflow

Authorized users can:

- Match
- Correct
- Accept Difference
- Create Adjustment
- Assign

- Escalate
- Dispute

AI Capability

AI should group similar exceptions and identify likely root causes.

Example:

82 pricing discrepancies appear to originate from an expired partner rate that remained cached in the OTA connector.

Acceptance Condition

Partner operational and financial records can be reconciled systematically, with every unresolved difference tracked through resolution.

Screen 8.3.7 — Commission Calculation & Settlement Management

Purpose

Calculate, approve and settle commission or incentive amounts owed under partner commercial agreements.

Settlement Dashboard

Display:

- Commission Earned
- Commission Pending
- Approved
- On Hold
- Paid
- Reversed
- Incentives Earned
- Next Settlement

Calculation Record

For each transaction:

- Order
- Partner
- Product
- Gross Value
- Net Rate
- Commission Basis
- Commission %
- Commission Amount
- Incentive

- Adjustment
- Payable Amount

Settlement Period

Support:

- Per Transaction
- Weekly
- Monthly
- Event-Based
- Custom Cycle

Adjustments

Automatically account for:

- Cancellation
- Refund
- Chargeback
- Partial fulfillment
- Commission correction
- Incentive qualification

Settlement Workflow

Recommended:

Calculated → Reconciled → Finance Review → Approved → Scheduled → Paid

Exception states:

On Hold / Disputed / Reversed

Settlement Batch

Finance can create settlement batches by:

- Partner
- Currency
- Period
- Legal Entity

Important Boundary

This screen determines and tracks **partner commission settlement**.

Actual accounting posting/payment execution belongs to Finance.

Acceptance Condition

TICVAI calculates partner commissions using approved commercial terms and prevents payment until relevant transactions and adjustments have been reconciled.

Screen 8.3.8 — Partner Disputes, Cases & Service Management

Purpose

Provide a structured case-management environment for partner operational and commercial disputes.

Case Types

Support:

- Booking Dispute
- Pricing Dispute
- Commission Dispute
- Credit Dispute
- Invoice Dispute
- Cancellation Dispute
- Ticket Issue
- Allocation Issue
- API Issue
- Settlement Dispute

Case Record

Capture:

- Case ID
- Partner
- Contact
- Category
- Priority
- Related Order
- Related Invoice
- Related Settlement
- Amount in Dispute
- Description
- Evidence
- Owner
- SLA
- Status

Case Lifecycle

**Open → Assigned → Investigating → Waiting Partner → Waiting Internal → Resolution
Proposed → Resolved → Closed**

SLA

Monitor:

- First Response
- Resolution Target
- Time Open
- SLA Breach

Internal Collaboration**Allow:**

- Notes
- Attachments
- Assignments
- Department escalation
- Finance review
- Technical review

AI Capability**AI can:**

- Summarize long cases
- Categorize requests
- Identify related transactions
- Suggest applicable policy
- Detect repeated issues

Acceptance Condition

Every partner dispute has a traceable owner, SLA, supporting evidence, financial context and documented resolution.

Screen 8.3.9 — Partner Performance Scorecard & Risk Monitoring

Purpose

Create a consistent scorecard for evaluating the quality and commercial value of every partner relationship.

Performance Dimensions**Measure:****Commercial**

- Sales
- Revenue
- Growth
- Margin
- Average Order Value

Allocation

- Utilization
- Sell-through
- Returned Inventory

Financial

- Payment Timeliness
- Credit Utilization
- Overdue Balance

Operational

- Cancellation Rate
- Refund Rate
- Error Rate
- Support Cases

Technical

- API Success
- Sync Reliability
- Transaction Failure Rate

Compliance

- Documentation
- Agreement Status
- Security/Guarantee Status

Partner Score**Example:****Gulf Travel — 87/100**

- Commercial: 92
- Financial: 90
- Allocation: 74
- Operational: 86
- Technical: 94
- Compliance: 100

Risk Rating**Use:****Low / Medium / High / Critical****Trend****Show:**

- Improving

- Stable
- Declining

Benchmarking

Compare partner against:

- Same partner type
- Same market
- Same channel
- Portfolio average

AI Risk Detection

Example:

Partner remains profitable, but payment delays and cancellation rates have deteriorated for three consecutive months.

Acceptance Condition

Management can objectively compare partners and identify commercial, operational or financial deterioration before it becomes a material issue.

Screen 8.3.10 — Partner AI Intelligence & Relationship Optimization

Purpose

Provide TICVAI's AI decision-support layer across the complete partner lifecycle.

This screen should combine information from **Boards 1, 2 and 3**.

AI Inputs

Analyze:

- Partner profile
- Territory
- Agreements
- Rates
- Commission
- Credit
- Payment behavior
- Allocation
- Orders
- Cancellations
- Settlement
- Cases
- Channel performance
- Historical trends

AI Recommendations

Commercial

Gulf Travel is exceeding its annual target by 18%. Consider reviewing its 2027 volume incentive.

Allocation

Desert Adventures is forecast to use only 52% of its allocation for the 15 September event. Consider releasing 320 tickets.

Credit

Partner is expected to reach 96% credit utilization within nine days based on current booking velocity.

Risk

Cancellation rate has increased 3.4× while average payment delay increased from 4 to 17 days.

Growth

Partner performs strongly for family attractions but has low penetration for premium experiences. Estimated cross-sell opportunity: AED 480K annually.

Natural-Language Analysis

Authorized management should be able to ask:

"Which partners should receive more inventory next month?"

"Which partners are becoming financially risky?"

"Who generates the highest net margin after commission?"

"Which OTA is performing best for Dubai Arena?"

"Which partner should we approach for VIP inventory?"

AI should query governed TICVAI data and explain its reasoning.

Partner Opportunity Matrix

AI can classify partners into:

Grow

Maintain

Review

Restrict

using configurable business criteria.

Scenario Simulation

Allow scenarios such as:

Increase Gulf Travel allocation by 20%.

Estimated:

- Additional Sales
- Revenue
- Margin
- Credit Exposure

- Inventory Risk

Or:

Reduce commission from 12% to 10%.

Estimate likely commercial impact using available historical evidence.

Recommendation Workflow**Each recommendation should contain:**

- Recommendation
- Reason
- Expected Impact
- Confidence
- Risks
- Supporting Metrics

Actions:

Accept / Modify / Reject / Simulate / Assign / Create Commercial Review

Human Governance**AI should not autonomously:**

- Increase credit
- Change contract rates
- Change commission
- Suspend partners
- Change guaranteed allocation
- Approve financial exceptions

unless an explicitly governed automation policy separately authorizes such actions.

Acceptance Condition

Management receives explainable partner-level intelligence and scenario modelling that supports growth, margin, allocation and risk decisions without bypassing commercial governance.

Board 3 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
8.3.1	Partner Operations Command Center	Live partner operations
8.3.2	Partner Orders & Booking Management	Partner transactions
8.3.3	Reservations, Holds & Release Management	Temporary inventory management

Screen	Backend Screen	Primary Responsibility
8.3.4	Partner Cancellations, Refunds & Amendments	Post-booking servicing
8.3.5	Partner Statement & Account Activity	Partner financial statement
8.3.6	Partner Reconciliation & Exception Management	Operational/financial reconciliation
8.3.7	Commission Calculation & Settlement Management	Partner commission settlement
8.3.8	Partner Disputes, Cases & Service Management	Partner case management
8.3.9	Partner Performance Scorecard & Risk Monitoring	Performance/risk scoring
8.3.10	Partner AI Intelligence & Relationship Optimization	AI growth and optimization

Area 8 — Complete Architecture

With Board 3 scoped, **Area 8 now contains 3 boards / 30 backend screens:**

Board 1 — Partner Account Management

Who is the partner?

Onboard → Verify → Authorize → Activate

Board 2 — Commercial Management

Under what terms can they transact?

Contract → Rate → Commission → Credit → Security → Billing → Allocation → Limits

Board 3 — Partner Operations & Intelligence

How is the relationship performing?

Orders → Holds → Amendments → Statement → Reconciliation → Settlement → Cases → Performance → AI

One important addition I strongly recommend

We should make **8.3.10 Partner AI Intelligence** a genuine **commercial copilot**, not simply another dashboard.

For example, the Commercial Director should be able to type:

“Show me the five UAE partners where increasing allocation is most likely to increase revenue without materially increasing credit risk.”

TICVAI should combine **sales velocity + margin + allocation utilization + credit exposure + payment history + available capacity**, rank the partners, explain why, and allow the manager to launch the appropriate governed workflow.

That would make Area 8 feel genuinely **AI-first**, rather than a traditional B2B module with an AI chart added at the end.
