Board 1 — Subscription & Commercial Command Center

Scope of Work — 10 Screens

Board 1 remains the **executive and operational command center** for TICVAI's subscription and commercial business.

The revision does **not** move configuration from Boards 3, 4, 5, 9, or 10 into Board 1. Instead, Board 1 gives management a consolidated view across **all commercial models**, including:

Tier-Based / Tier + Usage / Per-Ticket / Per-Transaction / Percentage-Based / Minimum Guarantee / Hybrid / Fixed / Custom

Core Board 1 principle

Board 1 monitors, analyzes, identifies and initiates action. It does not configure detailed pricing, VSI formulas, billable-unit rules, licensing rules or billing calculations.

Screen 1 — Commercial Command Center

Purpose

Provide TICVAI management with a real-time executive overview of the entire subscription and commercial business.

Primary KPIs

- Total Active Customers
- Active Subscriptions
- Active Trials
- MRR / Monthly Equivalent Revenue
- ARR / Annualized Contract Value
- New Revenue
- Expansion Revenue
- Contraction Revenue

- Churned Revenue
- Renewal Rate
- Trial-to-Paid Conversion
- Average Revenue per Customer

Commercial Model Distribution

Show customers and revenue by:

- Tier-Based
- Tier + Usage
- Per-Ticket
- Per-Transaction
- Percentage-Based
- Hybrid
- Fixed
- Custom

Example:

Model	Customers	Monthly Equivalent
Tier-Based	48	AED 680K
Tier + Usage	22	AED 320K
Per-Ticket	28	AED 410K
Per-Transaction	8	AED 145K
Hybrid	12	AED 180K
Fixed/Custom	7	AED 95K

Minimum Guarantee Performance

- Contracts with Minimum Guarantee
- Total Guaranteed Revenue
- Above Guarantee
- Currently Billing at Minimum
- Projected Below Guarantee
- Guarantee Utilization %

Example:

18 Minimum Guarantee Contracts
AED 420K Monthly Guaranteed Revenue
13 Above Guarantee
5 Currently at Minimum

Subscription Health

Active / Trial / Renewal Due / Grace / Suspended / Cancelled

AI Executive Insight

14 customers have commercial optimization opportunities representing an estimated AED 92K monthly revenue impact.

Actions

View Customers / Review Renewals / Review Commercial Opportunities / Revenue Analysis / Review Alerts

Screen 2 — Customer Subscription & Commercial Portfolio

Purpose

Provide a central portfolio of every TICVAI customer and their current commercial position.

Table Columns

- Customer
- Venue / Group
- Country
- VSI
- Operational Profile
- Commercial Model
- Tier where applicable
- Contracted Rate
- Minimum Guarantee
- Active Modules
- Monthly Equivalent Revenue
- Billable Volume
- Usage %
- Contract Start
- Renewal Date
- Subscription Status
- Commercial Health

Example

Dubai Discovery Museum

VSI 67

Enterprise Operational Profile

Per Ticket + Minimum Guarantee

AED 0.75/ticket

AED 20K/month minimum

41,620 current billable tickets

Commercial Health Indicators

- Healthy
- Attention Required
- Payment Risk
- Renewal Risk
- Expansion Opportunity
- Cost Optimization
- Contract Exception

Filters

Filter by:

- Commercial Model
- Operational Profile
- Tier
- Country
- Venue
- Status

- Renewal Period
- VSI
- Minimum Guarantee
- Usage
- Revenue
- Opportunity Type

AI Flags

Upgrade Candidate

Commercial Model Optimization

Minimum Guarantee Risk

Cost Optimization Candidate

Actions

Open Customer / Modify Subscription / Run Simulation / View Usage / View Billing / View Contract

Screen 3 — Customer Commercial 360°

Purpose

Provide the complete commercial, operational and subscription profile for one customer.

This screen must clearly separate **commercial charging** from **technical/operational classification**.

Customer Header

Dubai Discovery Museum

Active | Renewal: 30 Sep 2027

A. Operational Profile

- VSI: 67
 - Operational Profile: Enterprise
 - Venue Type: Museum
 - Annual Attendance
 - Technical Capacity Profile
-

B. Commercial Profile

Commercial Model

Per Ticket + Minimum Guarantee

Rate

AED 0.75 / Paid Ticket Sold

Minimum Guarantee

AED 20,000/month

Billing

Monthly

Contract

12 Months

C. Current Commercial Consumption

- Raw Tickets
- Billable Tickets
- Billable Transactions
- Eligible Transaction Value
- Current Variable Value
- Minimum Guarantee Position

Example:

Billable Tickets: 41,620

Variable Value: AED 31,215

Minimum: AED 20,000

Position: +AED 11,215 Above Minimum

D. Technical Entitlements

- POS
- Access Devices
- Users
- API
- Storage
- Venues

E. Active Modules

B2C / B2B / CRM / Analytics / Access Control / etc.

F. Financial Summary

- Base Revenue
- Module Revenue
- Variable Revenue
- Overage
- Services
- Discounts
- Current Monthly Equivalent
- Contract Value

Actions

Modify Subscription / Commercial Simulation / Add Module / Change Capacity / Review Billing / Start Renewal

Screen 4 — Operational Profile, VSI & Commercial Model Intelligence

Purpose

Analyze whether customers' operational profiles and commercial structures remain appropriate.

This replaces the previous focus only on **Tier Distribution & VSI**.

KPIs

- Customers by VSI
- Customers by Operational Profile
- Customers by Commercial Model

- Average VSI
- Profile Misalignment
- Commercial Model Optimization Candidates
- Upgrade Candidates
- Downgrade Candidates

Visualizations

Customers by Operational Profile

Essential / Professional / Enterprise / Enterprise+

Customers by Commercial Model

Tier / Usage / Ticket / Transaction / Percentage / Hybrid / Fixed / Custom

VSI vs Operational Profile

Identify customers whose technical profile may be misaligned.

VSI vs Commercial Model

Example:

Enterprise Operational Profile
Per-Ticket Commercial Model

This is a **valid combination**, not an exception.

AI Findings

8 Professional-profile customers are consistently operating at Enterprise utilization.

5 Enterprise-profile customers are commercially better suited to transaction-based pricing.

3 customers appear over-provisioned technically.

Actions

Review Customer / Run Simulation / Review VSI / Create Opportunity

Boundary

Actual VSI formulas, weights and thresholds remain in **Board 3**.

Screen 5 — Revenue & Commercial Model Analytics

Purpose

Analyze TICVAI revenue across all commercial structures.

KPIs

- MRR / Monthly Equivalent
- ARR / ACV
- New Revenue
- Expansion Revenue
- Contraction Revenue
- Churned Revenue
- NRR
- ARPC
- Growth %

Revenue by Commercial Model

Break down:

- Tier Subscription
- Tier + Usage
- Per-Ticket
- Per-Transaction
- Percentage
- Hybrid
- Fixed
- Custom

Revenue Composition

Example:

- Platform/Tier — 38%
- Ticket/Transaction — 27%
- Modules — 16%
- Minimum Guarantee — 7%
- Overage — 5%
- Services — 7%

Minimum Guarantee Analytics

Show:

- Guaranteed Revenue
- Actual Variable Revenue
- Guarantee Shortfall Protection
- Contracts Above Guarantee
- Contracts at Guarantee

Additional Breakdown

Revenue by:

- Customer
- Venue
- Country
- Module
- Operational Profile
- Contract Duration
- Sales Channel

AI Insight

Per-ticket customers generated 21% revenue growth this quarter, driven primarily by increased ticket volume.

Actions

[Drill Down](#) / [Compare Models](#) / [Export](#) / [View Customer](#)

Screen 6 — Trial & Conversion Monitor

Purpose

Monitor trial customers and their expected transition into paid commercial agreements.

KPIs

- Active Trials
- New Trials
- Expiring Trials
- Trial-to-Paid %
- Average Trial Duration
- Setup Completion
- Go-Live Readiness
- Estimated Conversion Value

Trial Table

- Customer
- Venue
- VSI
- Operational Profile
- Trial Package
- Proposed Commercial Model
- Proposed Tier if applicable
- Start
- Expiry
- Setup %
- Usage
- Modules
- Conversion Probability

Example

ABC Museum

Professional Operational Profile

Trial: 30 Days

Proposed Commercial Model: Tier-Based

Another customer:

Enterprise Operational Profile

Proposed Model: Per-Ticket + Minimum Guarantee

AI Conversion Insight

Customer has reached 92% setup completion and 78% trial usage. Conversion probability: 86%.

Actions

Convert / Extend Trial / Review Commercial Offer / Contact Customer / View Configuration

Screen 7 — Renewal & Retention Center

Purpose

Manage upcoming renewals and identify retention or commercial restructuring requirements.

KPIs

- Renewals Next 30 Days
- Next 60 Days
- Next 90 Days

- Renewal Value
- Renewal Rate
- At-Risk Revenue
- Auto-Renew Value
- Expansion Opportunity
- Optimization Opportunity

Renewal Pipeline

Columns:

- Customer
- Commercial Model
- Current Rate
- Minimum Guarantee
- Monthly Equivalent
- Contract Value
- Renewal Date
- Usage Trend
- Payment Health
- Risk
- AI Recommendation

AI Recommendations

Examples:

Maintain current per-ticket agreement.

Increase minimum guarantee based on sustained volume.

Consider Hybrid Model.

Reduce unused POS capacity.

Add CRM module.

No commercial change recommended.

Retention Signals

- Declining Usage
- Payment Problems
- Unused Modules
- Excessive Overage
- Low Adoption
- Support Issues
- Minimum Guarantee Dependency
- Contract Exceptions

Actions

Start Renewal / Modify Offer / Simulate / Create Retention Offer / Assign Owner

Screen 8 — Commercial Optimization & Expansion Opportunities

Purpose

Identify opportunities beyond traditional tier upgrades.

This is a key revision from the original **Upgrade, Downgrade & Expansion Opportunities** screen.

Opportunity Types

- Tier Upgrade
- Tier Downgrade
- Commercial Model Change
- Per-Ticket Rate Review
- Minimum Guarantee Review
- Module Upsell
- Capacity Expansion
- Capacity Reduction
- Attendance Pack
- POS Expansion
- Access Expansion
- API / Storage Expansion
- Contract Extension
- Billing Cycle Optimization

Opportunity KPIs

- Total Opportunities
- Potential Expansion Revenue
- Potential Retention Value
- Model Optimization Opportunities
- Module Opportunities
- Cost Optimization Opportunities

Example

Dubai Discovery Museum

Current:

AED 0.75/ticket + AED 20K minimum

Projected Volume:

790K tickets

AI recommendation:

Evaluate AED 0.65/ticket + AED 25K minimum versus Hybrid.

Financial Comparison

Show:

- Current Customer Cost
- Proposed Customer Cost
- TICVAI Revenue Impact
- Minimum Revenue Protection
- Customer Saving/Increase
- Confidence

Actions

Simulate / Accept / Modify / Reject / Create Opportunity / Send for Approval

Screen 9 — Subscription Exceptions & Commercial Alerts

Purpose

Provide management with one consolidated view of subscription, licensing, commercial, billing and metering exceptions.

Commercial Alerts

- Minimum Guarantee Underperformance
- Unusual Billable Volume
- Rate Override Expiring
- Contract Expiring
- Excessive Discount
- Missing Contract
- Commercial Model Conflict

Metering Alerts

- Billable Volume Mismatch
- Unreconciled Consumption
- Reseller Difference
- Missing Events
- Metering Rule Mismatch

Licensing Alerts

- POS Limit
- Access Limit
- User Limit
- Module Violation
- License Expiry
- Grace Period

Billing Alerts

- Failed Payment
- Overdue Invoice
- Repeated Failure
- Missing Billing Information
- Billing Reconciliation Pending

Severity

Critical / High / Medium / Low

Example

CRITICAL — Commercial Metering Mismatch

Contract:

Paid Ticket Sold

Meter:

All Tickets Issued

Billing must be blocked until corrected.

Actions

Resolve / Assign / Investigate / Temporary Override / Open Customer / Run Simulation

Screen 10 — Executive AI Commercial Intelligence

Purpose

Provide TICVAI leadership with an AI-powered executive commercial intelligence layer.

Executive KPIs

Example:

Monthly Equivalent Revenue: AED 1.42M

Growth: +7.8%

ARR/ACV: AED 17.04M

Renewal Rate: 94%

Trial Conversion: 38%

Expansion Pipeline: AED 182K/month

AI Findings

Growth

Per-ticket contracts are growing faster than standard tier contracts.

Minimum Guarantee

5 contracts are currently relying on minimum guarantee protection.

Expansion

12 customers have module or capacity expansion opportunities.

Optimization

4 customers may benefit from changing commercial models.

Retention

3 renewals representing AED X are considered high risk.

Natural-Language Commercial Queries

Management should be able to ask:

Which customers are most likely to upgrade in the next 90 days?

Which per-ticket customers are consistently above their minimum guarantee?

Which minimum-guarantee contracts are currently protecting TICVAI revenue?

Which customers should move from tier-based to per-ticket pricing?

Which customers could benefit from a hybrid model?

Show customers with Enterprise technical profiles but low utilization.

Why did commercial revenue decline last month?

Which modules generate the highest revenue?

AI Response

AI must provide:

- Finding
- Supporting Data
- Financial Impact
- Confidence
- Recommended Action

Actions

Investigate / Create Opportunity / Run Simulation / Assign / Export

Board 1 — Standardized Commercial Metrics

To avoid different screens calculating metrics differently, Board 1 should use standardized definitions.

Customer Metrics

- Active Customers
- New Customers
- Churned Customers
- Trials
- Conversion

Revenue Metrics

- MRR / Monthly Equivalent Revenue
- ARR / ACV
- New Revenue
- Expansion
- Contraction
- Churn
- NRR
- ARPC

Variable Commercial Metrics

- Billable Tickets
- Billable Transactions
- Eligible Transaction Value
- Variable Revenue
- Minimum Guaranteed Revenue
- Guarantee Utilization
- Revenue Above Guarantee

Operational Metrics

- VSI
- Operational Profile
- POS Utilization
- Access Utilization
- User Utilization
- API
- Storage
- Admissions

Commercial Intelligence Metrics

- Renewal Risk
- Expansion Probability
- Model Optimization Opportunity
- Cost Optimization
- Upgrade/Downgrade Probability
- Commercial Health

Critical Board 1 Architecture

The dashboard must make these concepts visibly separate:

Operational Classification

VSI 67 — Enterprise

Commercial Charging

Per Ticket + Minimum Guarantee

Commercial Consumption

41,620 Billable Tickets

Technical Licensing

20 POS / 40 Access / 35 Users

Financial Position

AED 31,215 Current Variable Charge Basis

They are related, but they are **not interchangeable**.

Board 1 Data Sources

Board 1 should primarily consume information from the other boards rather than duplicate their logic:

Board 2

→ Customer assessment

Board 3

→ VSI, commercial model and commercial rules

Board 4

→ Package and modules

Board 5

→ Contract and subscription

Board 6

→ Provisioning/license activation

Board 7

→ Setup progress

Board 8

→ Go-live status

Board 9

→ Operational and commercial consumption

Board 10

→ Billing, payment, renewal and commercial optimization

This makes Board 1 the **single management cockpit across the entire commercial lifecycle**.

Board 1 acceptance outcome

Board 1 is complete when TICVAI management can open one command center and immediately answer:

How is the subscription business performing?

How much revenue comes from each commercial model?

Which customers require attention?

Which minimum guarantees are protecting revenue?

Where are the expansion, retention and optimization opportunities?

Are operational profile, commercial model, consumption, licensing and billing aligned?

Board 2 — AI Customer Onboarding & Venue Assessment

Scope of Work — 10 Screens

TICVAI TICKETING INTELLIGENCE

Board 2 – AI Customer Onboarding & Venue Assessment
From understanding your business to a personalized TICVAI solution

Your Venue. Smarter. Together.

1. Welcome & Start Your Journey

Build Amazing Visitor Experiences with TICVAI

Tell us about your operation and we'll recommend the right TICVAI setup for your business.

Hi I'm your TICVAI AI Assistant. I'll guide you through a few questions about your venue. You don't need to know our modules - just tell us about your business.

- 1 Tell us about your venue
- 2 Define your operation
- 3 Get your recommended solution
- 4 Review pricing
- 5 Start trial or purchase

Estimated time: 10-15 minutes

[Start New Setup](#) [Continue Saved Setup](#) [Sign In](#)

Need help with a complex project? Request Enterprise Consultation.

2. Organization & Registration

Tell us about your organization

Let's start with some basic information to create your account and organization profile.

Organization Information

Organization Name * Dubai Discovery Museum Discovery Museum

Country * UAE City * Dubai

Website * www.discoverymuseum.ae Industry * Museums & Attractions

Number of Venues * 1 Preferred Currency * AED (AED)

Preferred Language * English Time Zone * (GMT+03) Dubai

Administrator Details

First Name * Ahmed Last Name * Khan

Business Email * ahmed.khan@discoverymuseum.ae Mobile Number * +971 50 323 4567

Job Role * Administrator Password * *****

Business Type

Private Semi-Government Non-Profit

[Save & Exit](#) [Save & Continue](#)

3. Venue Type & Business Profile

What type of venue do you operate?

Select the option that best describes your primary venue. This will help us ask the right questions.

Museum Attraction Theme Park Waterpark Stadium Theatre Exhibition / Event Zoo / Aquarium Tour Operator Event Management Center Main Venue Operator Other

Venue Details

Venue Name * Dubai Discovery Museum Location * Dubai, UAE

Indoor / Outdoor * Indoor Operation Type * Permanent

Opening Months * Year Round Opening Days * 7 days per week

Number of Locations * 1

[Save & Continue](#)

4. Visitor, Capacity & Operational Scale

Tell us about your visitors and operations

This helps us understand the size of your operation.

Visitor Information

Expected Annual Visitors * 280,000 Average Daily Visitors * 900 Peak Daily Visitors * 4,000

Peak Season * Oct - Apr Average Group Size * 12

Capacity

Maximum Venue Capacity * 5,000 Simultaneous Visitor Capacity * 2,000

Number of Entrances * 3 Number of Exits * 3

Operational Scale

Number of POS Terminals * 6 Number of Access Devices * 10

Number of Back-Office Users * 14 Number of Venues * 1

Estimated Annual Transactions * 210,000

Growth Forecast

Expected growth in the next 12-24 months?

Stable < 10% 10-25% 25-50% > 50%

Based on your current selected, 18 more volumes, your operation appears to be within the Professional range. We'll confirm this after completing the assessment.

10. AI Assessment Summary & Handoff

Here is your assessment summary

Review your information before we prepare your recommended package.

Dubai Discovery Museum

Location: Dubai, UAE

Locations: 1

Annual Visitors: 280,000

POS: 6 Access Devices: 10

Users: 14 | Transactions: 210,000

Estimated VSI

44

Level: Tier 1 Professional

Key Requirements Identified

- ✓ POS (on-site)
- ✓ B2C Commerce (online)
- ✓ B2B / Reseller (hotels and tour operators)
- ✓ CRM & Marketing
- ✓ Group Sales
- ✓ F&B
- ✓ Retail

AI Recommendation

Based on your assessment, we will now prepare your recommended TICVAI package, including the right fee, modules and pricing options.

[Back](#) [Review Answers](#) [Continue to My Recommended Package](#) [Save Assessment](#) [Request TICVAI Consultation](#)

Board Objective: Allow a new customer to register, describe their venue/business, and let TICVAI intelligently determine their operational requirements before calculating the VSI, recommending a subscription tier, and suggesting modules.

The main principle is:

The customer should not need to understand TICVAI modules before starting. TICVAI should understand the customer's business first, then recommend what they need.

Screen 1 — Welcome & Start Your TICVAI Journey

Purpose

Provide the entry point for a new customer starting self-service onboarding.

4. Review pricing
5. Start Trial / Purchase

Starting Options

- Start New Setup

- Continue Saved Setup
- Sign In
- Request Enterprise Consultation

Information

- Estimated completion time
- Setup progress
- Save & continue later

AI Assistant

“I'll guide you through a few questions about your venue. You don't need to know which TICVAI modules you need yet.”

Screen 2 — Customer & Organization Registration

Purpose

Create the initial customer account and organization profile.

Organization Information

- Organization Name
- Trading Name
- Country
- City
- Website
- Industry
- Number of Venues
- Preferred Currency
- Preferred Language
- Time Zone

Administrator

- First Name
- Last Name
- Business Email
- Mobile Number
- Job Role
- Password / Authentication

Business Type

- Private
- Government
- Semi-Government
- Non-Profit
- Other

Actions

Save & Continue

Save & Exit

Screen 3 — Venue Type & Business Profile

Purpose

Understand what type of operation the customer runs.

Venue Type Selection

Visual cards:

- Museum
- Attraction
- Theme Park
- Waterpark
- Stadium
- Theatre
- Exhibition / Event Venue
- Zoo / Aquarium
- Tour Operator
- Entertainment Center
- Multi-Venue Operator
- Other

Example

Customer selects:

Museum

TICVAI immediately adapts the remaining onboarding questions to museum operations.

Additional Fields

- Venue Name
- Location
- Indoor / Outdoor / Mixed
- Permanent / Seasonal / Event-Based
- Opening Months
- Operating Days
- Number of Locations

AI Insight

“Museum selected. I'll focus the next questions on admissions, timed entry, memberships, groups, POS and access requirements.”

Screen 4 — Visitor, Capacity & Operational Scale

Purpose

Collect the information required to understand venue size and eventually calculate the VSI.

Visitor Information

- Expected Annual Visitors
- Average Daily Visitors
- Peak Daily Visitors
- Peak Season
- Average Group Size

Capacity

- Maximum Venue Capacity
- Simultaneous Visitor Capacity
- Number of Entrances
- Number of Exits

Operational Scale

- Number of POS Terminals
- Number of Access-Control Devices
- Number of Back-Office Users
- Number of Venues
- Estimated Annual Transactions

Growth

Expected growth during the next 12–24 months?

- Stable
- <10%
- 10–25%
- 25–50%
- 50%

AI Insight

“Based on your current visitor and device volumes, your operation appears to be within the Professional range. We'll confirm this after completing the assessment.”

Important: This screen gathers the data. **Board 3 calculates and configures the actual VSI rules.**

Screen 5 — Sales Channel Assessment

Purpose

Understand how the customer intends to sell tickets and products.

Question

How do you sell or plan to sell?

Selectable options:

- ☐ On-site POS
- ☐ Own Website / B2C
- ☐ Mobile App
- ☐ Tour Operators
- ☐ Hotels
- ☐ Resellers
- ☐ Corporate Customers
- ☐ Call Center
- ☐ Kiosk
- ☐ Flying / Mobile POS
- ☐ OTA / Third-Party Channels

Additional Questions

- Online sales percentage
- On-site sales percentage
- Expected transactions

- Number of sales locations
- Number of resellers
- Number of corporate accounts

AI Recommendation Preview

Example:

Customer selects:

Website + POS + Hotels + Tour Operators

AI identifies likely requirements:

B2C Commerce

POS

B2B / Reseller

But the customer is not yet asked to purchase them.

Screen 6 — Ticketing & Product Requirements

Purpose

Understand what the venue intends to sell.

Question

What types of tickets/products do you need?

Selectable options:

- General Admission
- Dated Admission
- Timeslot Admission
- Open-Dated Ticket
- Multi-Day Ticket
- Family Ticket
- Group Ticket
- Membership
- Annual Pass
- Season Pass
- Voucher
- Bundle
- Add-On
- Camp / Course
- Special Event

Additional Requirements

- Reserved Seating?
- Capacity-controlled sessions?
- Dynamic pricing?
- Promotions?
- Membership discounts?
- Group pricing?
- Corporate pricing?

- Packages?

AI Analysis

Example:

“You selected reserved seating and scheduled performances. Seat Management may be required.”

This feeds the module recommendation later.

Screen 7 — Access, Queue & Visitor Experience Assessment

Purpose

Determine admission and visitor-flow requirements.

Access Requirements

- QR Ticket Validation
- Mobile Ticket
- RFID
- NFC
- Wallet
- Turnstiles
- Handheld Scanners
- Face Pass
- Re-entry
- Anti-passback
- Group Admission

Access Infrastructure

- Number of Gates
- Number of Turnstiles
- Number of Handheld Readers
- Entry/Exit Tracking Required?

Queue Requirements

Do visitors regularly experience queues?

Yes / No

If Yes:

- Entrance queues
- Attraction queues
- Ticket counter queues
- Peak-period queues

AI Recommendation

Example:

“High peak attendance and attraction queues detected.”

Potential recommendation:

Virtual Queue

Screen 8 — Additional Business Module Assessment

Purpose

Identify additional TICVAI operational modules based on the customer's business.

Customer Questions

Do you operate food & beverage outlets?

Yes / No

Do you operate retail stores?

Yes / No

Do you require memberships or loyalty programs?

Yes / No

Do you run marketing campaigns?

Yes / No

Do you manage bookable resources?

Yes / No

Examples:

- Rooms
- Guides
- Equipment
- Facilities
- Experiences

Do you manage staff, contractors, media or VIP credentials?

Yes / No

AI Mapping

Answers can trigger candidate modules:

F&B → F&B Module

Retail → Retail Module

Marketing → CRM & Marketing

Bookable Assets → Resource Management

Credentials → Accreditation

Membership → Membership & Loyalty

Important UX Principle

The customer answers **business questions**, not technical software questions.

Instead of:

“Would you like Resource Management?”

ask:

“Do customers reserve guides, rooms, equipment or other resources?”

TICVAI translates the answer into the appropriate module.

Screen 9 — Integration, Payment & Technical Readiness

Purpose

Understand external systems and technical requirements that could affect complexity, implementation approach and commercial scope.

Payment

- Payment Gateway Required?
- Existing Payment Provider?
- Multiple Payment Providers?
- POS Card Terminals?
- Refund Requirement?
- Multi-Currency?

Integration Requirements

- ☐ ERP
- ☐ CRM
- ☐ Accounting
- ☐ Payment Gateway
- ☐ Hotel/PMS
- ☐ Government Platform
- ☐ Access Control
- ☐ Mobile App
- ☐ External Resellers
- ☐ Data Warehouse
- ☐ Other APIs

Deployment / Complexity Questions

- Single Venue / Multi-Venue
- Standard / Complex Integrations
- Data Migration Required?
- Existing Ticketing Migration?
- Historical Data Required?
- Custom Development Expected?

AI Complexity Assessment

Example:

Implementation Complexity: High

Reason:

- 4 venues
 - ERP integration
 - Existing ticket migration
 - 120 access devices
 - 2 payment gateways

AI may indicate:

Managed Enterprise Implementation Recommended

This is important because not every customer should automatically follow zero-touch onboarding.

Screen 10 — AI Assessment Summary & Handoff

Purpose

Consolidate everything learned during onboarding and prepare the customer for Board 3/4 commercial recommendation.

Customer Profile

Example:

Dubai Discovery Museum

Venue Type: Museum

Locations: 1

Annual Attendance: 280,000

POS: 6

Access Devices: 10

Users: 14

Estimated Transactions: 210,000

Required Capabilities

- ✓ POS
 - ✓ B2C
 - ✓ B2B
 - ✓ QR Access
 - ✓ Membership
 - ✓ CRM
 - ✓ Group Sales

AI Suggested Modules

B2C Commerce — Recommended

You require direct online ticket sales.

B2B / Reseller — Recommended

You sell through hotels and tour operators.

Membership & Loyalty — Recommended

Annual memberships were selected.

CRM & Marketing — Suggested

Marketing campaigns and customer segmentation were selected.

Complexity

Operational Complexity: Medium

Initial VSI Preview

Estimated VSI: 44

Likely Tier

Professional

Important Notice

This should be shown as:

Preliminary Recommendation

because the definitive VSI/tier result must come from the configured commercial rules engine.

Actions

Continue to My Recommended Package

Review Answers

Save Assessment

Request TICVAI Consultation

Board 2 — AI Behavior

AI should be present throughout the board, but **not as a generic chatbot sitting in the corner**.

It should actively:

- Adapt questions
- Skip irrelevant questions
- Explain terminology
- Detect inconsistencies
- Suggest missing information
- Estimate where permitted
- Identify operational requirements
- Map business requirements to TICVAI capabilities
- Identify implementation complexity
- Prepare the next commercial step

For example, if the customer says:

“We have 300,000 visitors and most arrive during school holidays.”

AI could ask:

“Do you experience significant entrance queues during those periods?”

If yes, the assessment can explore Virtual Queue requirements.

Board 2 — Key Output

At the end of Board 2, TICVAI should have created a structured **Customer Assessment Profile** containing:

Organization Profile + Venue Profile + Operational Scale + Visitor Volume + POS + Access + Users + Transactions + Sales Channels + Ticketing Requirements + Operational Modules + Integrations + Growth Forecast + Implementation Complexity

That structured profile becomes the input for the next boards.

Board flow

Board 2: “Who are you and what do you need?”

↓

Board 3: “Based on our commercial rules, what tier and licensing structure applies to you?”

↓

Board 4: “Here is the package, modules and commercial offer we recommend.”

This separation is important because **Board 2 should discover the customer's needs without trying to sell them a predefined package too early.**

Board 3 — VSI, Commercial Model, Tier & Licensing Rules Engine

Scope of Work — 10 Screens

This revision keeps the original Board 3 logic but adds the missing **Per-Ticket / Per-Transaction / Minimum Guarantee / Hybrid commercial models**.

The most important architectural principle is:

Commercial Charging Model ≠ Technical Licensing Model

A customer can therefore be technically classified as a large Enterprise operation while commercially paying TICVAI **AED X per ticket** instead of an Enterprise subscription fee.

Screen 1 — Commercial Rules Engine Overview

Purpose

Provide TICVAI administrators with the central configuration overview for all commercial and licensing rules.

KPI Cards

- Active Commercial Models
- Active Tiers
- Active VSI Model
- Customers by Commercial Model
- Average VSI
- Customers Near Threshold
- Customers Above Allowance
- Per-Ticket Contracts
- Minimum Guarantee Contracts
- Pending Rule Changes

Rules Architecture

Show the relationship:

Customer Assessment

- VSI
- Commercial Model
- Tier / Contract
- Allowances
- Technical License
- Usage / Billable Units
- Overage / Minimum Guarantee
- Billing

Commercial Models

- Tier-Based
- Tier + Usage
- Per Ticket
- Per Transaction
- Percentage-Based
- Minimum Guarantee
- Hybrid
- Fixed Contract
- Custom Contract

Alerts

Example:

- 8 customers approaching licensed capacity.
- 3 minimum-guarantee contracts projected below guarantee.

Actions

Configure VSI / Manage Commercial Models / Manage Tiers / Manage Licensing / Simulate Rules / Review Pending Changes

Screen 2 — VSI Model Builder

Purpose

Configure how TICVAI determines the operational size and complexity of a customer.

VSI remains important even where VSI does not determine customer pricing.

Example Factors

Factor	Weight
Annual Attendance	30%
POS	20%
Access Devices	15%
Number of Venues	15%
Back-office Users	10%

Factor	Weight
Annual Transactions	10%

Configuration Fields

- Factor Name
- Weight
- Data Source
- Minimum Value
- Maximum Value
- Scoring Method
- Mandatory/Optional
- Venue Type Applicability
- Market Applicability
- Effective Date

Validation

Total Weight = 100%

Actions

Add Factor / Remove / Reorder / Clone Model / Save Draft / Publish

Important

VSI may be used for:

- Recommended tier
- Infrastructure profile
- Implementation complexity
- Support level
- Capacity planning
- Commercial recommendation

But **VSI does not have to determine the charging model or price.**

Screen 3 — VSI Scoring & Tier Threshold Configuration

Purpose

Translate actual customer characteristics into a standardized VSI score and recommended operational tier.

Example Scoring

Annual Attendance

Range	Score
0–100K	10
100K–500K	40
500K–1M	70
1M+	100

Repeat configurable scoring for:

- POS
- Access Devices
- Venues
- Users
- Transactions

Tier Thresholds

Example:

VSI	Recommended Tier
0–30	Essential
31–60	Professional
61–80	Enterprise
81–100	Enterprise+

Preview

Customer:

Dubai Discovery Museum

VSI: 67

Operational Recommendation:

Enterprise

Commercial Model:

Per Ticket

This example is important because it demonstrates that the recommended operational tier and charging model can differ.

Actions

[Edit Threshold](#) / [Preview Customer](#) / [Test Model](#) / [Save](#)

Screen 4 — Subscription Tier Configuration

Purpose

Configure TICVAI's standard subscription tiers for customers using tier-based commercial models.

Tier Cards

Essential

Professional

Enterprise

Enterprise+

Configuration

For each tier:

- Tier Name

- Description
- VSI Recommendation Range
- Monthly Base Price
- Annual Base Price
- Currency
- Trial Availability
- Trial Duration
- Online Purchase Allowed
- Self-Service Allowed
- Implementation Model
- Support Level
- Effective Date
- Expiry Date

Example

Professional

VSI:

31–60

Base:

AED X/month

Implementation:

AI-Led + Optional TICVAI Assistance

Actions

Create Tier / Edit / Clone / Suspend / Retire / Version

Important

This screen applies to **standard tier-based contracts**. Per-ticket and custom commercial models are configured separately.

Screen 5 — Tier Included Allowances

Purpose

Configure the resources included within each standard subscription tier.

Allowance Matrix

Resource	Essential	Professional	Enterprise
POS	3	10	30
Access Devices	5	20	60
Users	5	20	50
Admissions	100K	500K	2M
Transactions	100K	600K	2.5M
API	250K	1M	5M
Storage	25GB	100GB	500GB

Configuration per Allowance

- Metric
- Quantity
- Measurement Period
- Reset Period
- Warning Threshold
- Enforcement Type
- Overage Allowed
- Overage Rate
- Additional Pack Allowed

Actions

Edit Allowance / Copy Tier / Add Resource / Set Threshold

Screen 6 — Commercial & Licensing Model Configuration

Purpose

This is the **major revised screen**.

Configure how TICVAI charges a customer **independently from how TICVAI technically licenses the customer**.

A. Commercial Charging Model

Available Models

Tier-Based

Fixed tier subscription.

Tier + Usage

Base tier + variable consumption.

Per Ticket

Billable Tickets × Contracted Rate

Per Transaction

Billable Transactions × Contracted Rate

Percentage-Based

Eligible Transaction Value × %

Minimum Guarantee

Variable Charge subject to minimum contractual value.

Hybrid

Base + Modules + Variable Ticket/Transaction Charge.

Fixed Contract

Negotiated fixed value.

Custom

Approved combination of commercial rules.

Commercial Configuration Fields

- Commercial Model
- Charging Unit
- Rate
- Currency
- Billing Period
- Included Volume
- Minimum Guarantee
- Guarantee Period
- Percentage Rate
- Fixed Base Fee
- Module Charging
- Effective Date
- Expiry
- Contract Applicability

Example

Commercial Model:

Per Ticket + Minimum Guarantee

Rate:

AED 0.75 / Billable Ticket

Minimum Guarantee:

AED 20,000 / Month

B. Technical Licensing Model

Separately configure:

- POS Limit
- Access Device Limit
- User Limit
- Venue Limit
- API Limit
- Storage Limit
- Module Entitlements
- Technical Capacity Profile
- Hard/Soft/Approval Enforcement

Example

Commercial:

AED 0.75 / Ticket

Technical:

Enterprise Profile

30 POS

60 Access Devices

50 Users

This separation is mandatory.

Screen 7 — Billable Unit, Minimum Guarantee & Enforcement Rules

Purpose

Define **exactly what TICVAI counts commercially** and what happens when contractual or technical thresholds are reached.

Billable Unit Definition

Configuration should support:

- Ticket Sold
- Ticket Issued
- Paid Ticket
- Transaction
- Admission/Redemption
- Gross Transaction Value
- Net Transaction Value
- Custom Billable Event

Ticket Treatment Rules

Event	Billable?
Paid Ticket	Yes
Complimentary Ticket	No
Refunded Ticket	No
Cancelled Ticket	No
Reseller Ticket	Yes
Reissued Ticket	No
Group Ticket	Configurable
Membership Admission	Configurable

Group Handling

Example:

1 transaction containing 50 tickets

Commercial rule can specify:

50 billable tickets

or

1 billable transaction

depending on contract.

Minimum Guarantee Rules

Configure:

- Guarantee Amount
- Monthly / Quarterly / Annual
- Carry Forward Allowed
- Carry Forward Period

- Reconciliation Method
- Currency
- Effective Dates

Calculation

Invoiceable Variable Charge = MAX(Minimum Guarantee, Calculated Variable Charge)

Technical Thresholds

Examples:

- 70% → Information
- 80% → Warning
- 90% → Recommendation
- 100% → Overage / Enforcement
- 120% → Commercial Review

Enforcement Types

Soft / Hard / Overage / Approval

Screen 8 — Overage Pricing & Capacity Packs

Purpose

Configure additional consumption pricing and purchasable capacity.

Overage Configuration

Examples:

Admissions

AED 0.03 / admission above allowance

API

AED X / 1,000 calls

Storage

AED X / GB

Capacity Packs

Examples:

+100K Admissions

+5 POS

+10 Users

+10 Access Devices

+1M API Calls

+100GB Storage

Pack Configuration

- Pack Name
- Resource

- Quantity
- Price
- Recurring/One-Time
- Validity
- Applicable Tier
- Applicable Commercial Model
- Auto-Renew
- Proration
- Effective Dates

AI Comparison

Projected overage: AED 3,000

+100K Pack: AED 2,400

Estimated Saving: AED 600

Actions

Create Pack / Edit / Clone / Retire / Simulate

Screen 9 — Commercial Model & Rule Simulation

Purpose

Allow TICVAI to test commercial models before applying them.

This screen now becomes more powerful than the original Board 3 simulator.

Customer Inputs

- Annual Attendance
- Tickets Sold
- Transactions
- Transaction Value
- POS
- Access Devices
- Users
- API
- Storage
- Modules
- Contract Duration

Scenario A — Tier-Based

Professional + Capacity

AED 145K/year

Scenario B — Per Ticket

600K Tickets × AED 0.25

AED 150K/year

Scenario C — Per Ticket + Minimum Guarantee

AED 0.20/ticket

Minimum:

AED 10K/month

Calculated:

AED 120K/year

Scenario D — Hybrid

Base + Modules + AED X/Ticket

AED 137K/year

Comparison

Show:

- Customer Annual Cost
- TICVAI Revenue
- Variable Revenue
- Minimum Guarantee
- Capacity
- Projected Overage
- Contract Value
- Commercial Risk

AI Recommendation

Hybrid provides the best balance between predictable TICVAI revenue and customer growth.

Actions

Compare / Save Scenario / Create Proposal / Send for Approval

Screen 10 — Rule Versioning, Approval & Publication

Purpose

Govern changes to all commercial, VSI, licensing, billable-unit and pricing rules.

Version Information

- Rule Set
- Version
- Status
- Created By
- Created Date
- Effective Date
- Affected Customers
- Estimated Revenue Impact

Change Summary

Example:

Per-ticket minimum guarantee changed from AED 15K → AED 20K for new contracts.

Impact Analysis

- Existing Customers
- New Customers
- MRR/ARR Impact
- Per-Ticket Revenue
- Minimum Guarantee Exposure
- Contract Conflicts

- Licensing Impact

Workflow

Draft

- Simulation
- Commercial Review
- Finance Approval
- Authorized Approval
- Scheduled Publication
- Active

Application Rules

New Customers Only

At Renewal

Immediate

Specific Date

Grandfather Existing Contracts

Governance

Maintain:

- Previous Value
- New Value
- Reason
- User
- Approval
- Timestamp
- Effective Date
- Rollback Version

Actions

Submit / Approve / Reject / Schedule / Publish / Rollback

Revised Board 3 — Critical Architecture

Softlabs should implement three separate concepts:

1. Operational Classification

VSI

Answers:

How large and operationally complex is this customer?

2. Commercial Charging

Commercial Model

Answers:

How does TICVAI make money from this customer?

3. Technical Licensing

License Model

Answers:

What is the customer technically allowed to use?

For example:

VSI: 76

Operational Profile: Enterprise

Commercial Model: AED 0.60 per ticket + AED 25K monthly minimum

Technical License: 30 POS + 60 Access + 50 Users + B2C + B2B + CRM

These values must **not be forced to depend on each other**.

Revised Board 3 Output

Board 3 should produce a structured commercial rule result:

Customer: Dubai Discovery Museum

VSI: 76

Operational Recommendation: Enterprise

Commercial Model: Per Ticket + Minimum Guarantee

Billable Unit: Paid Ticket Sold

Rate: AED 0.60 / Ticket

Minimum Guarantee: AED 25,000/month

Technical Profile: Enterprise

POS: 30

Access: 60

Users: 50

Modules: B2C, B2B, CRM

Rule Version: V3.2

Effective Date: 01 October 2026

Status: APPROVED

This result then flows into **Board 4 — Package Builder & Module Marketplace**, where the actual customer package and commercial offer are assembled.

Board 4 — Package Builder & Module Marketplace

Revised Board 4 — Package Builder & Module Marketplace

The screenshot displays the TICVAI Board 4 interface, which is a comprehensive tool for building and approving customer packages. The interface is organized into ten main sections, each representing a step in the process:

- Recommended Package Overview:** Shows the current package configuration for the Dubai Discovery Museum, including VSI Score (67), Profile (Enterprise), Estimated Ticket Volume (750,000), and Contract Term (12 Months). It also displays the Recommended Package (Per Ticket + Minimum Guarantee) and AI Recommendation (Per Ticket).
- Commercial Model & Tier Selection:** Allows users to choose the best commercial model for the customer, with options for Tier-Based, Per Ticket, Per Transaction, Percentage-Based, Hybrid, Fixed Contract, and Custom.
- Module Marketplace:** A central hub for selecting and configuring modules. It includes a search bar, filters, and a list of modules such as B2C, B2B, CRM, Analytics, Access Control, and Virtual Queue. Each module has a status (Included, Optional, or Not Required) and a price.
- AI Module Recommendations:** Provides AI-generated recommendations for modules, categorized by confidence level (High, Medium, or Not Required).
- Module Detail & Commercial Treatment:** Offers detailed information about a selected module, including its features, key features, and commercial treatment options.
- Module Dependency & Compatibility:** Ensures the package is technically valid by checking for dependencies and compatibility between modules.
- Add-ons, Capacity & Commercial Options:** Allows users to add additional resources without a tier upgrade, including Capacity & Resources, Add-on Packs, and Commercial Options.
- Commercial Package Simulator:** Compares different commercial models (Tier-Based, Per Ticket, Hybrid, Custom) to help users choose the best option.
- Package Review & Commercial Summary:** Provides a comprehensive overview of the package, including VSI Score, Profile, Commercial Model, Rate, Minimum Guarantee, Contract Duration, Operational Profile, Package Version, and Estimated Commercial Value.
- Final Package Approval & Handoff:** The final step in the process, where the package is approved and sent to the customer for activation.

Scope of Work — 10 Screens

With the revised Board 3, Board 4 must no longer assume that every customer purchases a standard **Essential / Professional / Enterprise** subscription.

Board 4 receives the approved commercial rules from Board 3 and turns them into the **actual customer package and commercial proposal**.

A package can therefore be:

Tier-Based / Per-Ticket / Per-Transaction / Percentage-Based / Minimum Guarantee / Hybrid / Fixed / Custom

The key principle is:

Board 3 defines the commercial rules. Board 4 uses those rules to assemble, compare, price and approve the customer package.

Screen 1 — Recommended Package Overview

Purpose

Present the AI-generated recommended package based on:

- Board 2 Customer Assessment
- VSI
- Operational requirements
- Commercial model
- Technical licensing profile
- Required modules
- Expected ticket/transaction volume
- Contract requirements

Customer Header

Example:

Dubai Discovery Museum

- VSI: 67
- Operational Profile: Enterprise
- Expected Tickets: 750,000/year
- POS Required: 20
- Access Devices: 40
- Users: 35
- Contract: 12 Months

AI Recommended Package

Commercial Model

Per Ticket + Minimum Guarantee

Commercial Terms

AED 0.75 / Billable Ticket

Minimum Guarantee: AED 20,000/month

Technical Profile

Enterprise

Recommended Modules

- B2C
- B2B
- CRM
- Mobile
- Analytics

AI Rationale

Example:

Per-ticket pricing is recommended because ticket volume varies seasonally while the customer requires Enterprise operational capacity.

Actions

Accept Recommendation / Modify Package / Compare Models / Start Simulation / Save Draft

Screen 2 — Commercial Model & Tier Selection

Purpose

Allow TICVAI commercial users — or authorized self-service customers where applicable — to select the appropriate **commercial charging model**.

This replaces the previous assumption that this screen is only a tier comparison.

Commercial Model Cards

Tier-Based

Fixed recurring platform subscription.

Tier + Usage

Subscription plus variable usage/overage.

Per Ticket

Fee for each contractually billable ticket.

Per Transaction

Fee for each billable transaction.

Percentage-Based

Percentage of eligible transaction value.

Hybrid

Base/platform fee + modules + variable consumption.

Fixed Contract

Negotiated fixed commercial amount.

Custom

Approved customer-specific model.

Selected Example

Per Ticket + Minimum Guarantee

Rate:

AED 0.75 / Ticket

Minimum:

AED 20,000 / Month

Operational Recommendation

Separately show:

VSI 67 — Enterprise Operational Profile

This ensures users understand that **commercial model and operational tier are separate concepts**.

Actions

Select Model / Compare Models / Use AI Recommendation / Request Custom Model

Screen 3 — Module Marketplace

Purpose

Allow the customer or TICVAI commercial team to select optional TICVAI modules.

Module Categories

Sales

- B2C
- B2B
- Mobile
- POS
- Reseller

Venue Operations

- Seat Management
- Resource Management
- Virtual Queue
- Accreditation
- Access Control

Customer

- CRM
- Membership
- Loyalty

Commercial

- Dynamic Pricing
- Promotions

Operations

- F&B
- Retail
- Rental

Module Card

Each module displays:

- Module Name
- Description
- Key Features
- Commercial Status
- Included / Optional
- Price or Contract Treatment
- Dependencies
- Recommended / Required
- Trial Availability

Important

Module pricing can vary by commercial model.

Example:

CRM

Tier customer:

AED X/month

Per-ticket contract:

Included

Custom enterprise contract:

Contract Included

Actions

Add Module / Remove / View Details / Compare / Request Trial

Screen 4 — AI Module & Package Recommendations

Purpose

Use AI to recommend the appropriate modules and package configuration based on the customer's business.

AI Inputs

- Venue Type
- Attendance
- Ticket Volume
- Sales Channels
- POS
- Access Devices
- Customer Journey
- Queue Requirements
- Membership Requirements
- Seat Requirements
- Integrations
- Current Selected Package

Example Recommendations

HIGH CONFIDENCE

Add Virtual Queue

Peak attendance indicates queue-management requirements.

HIGH CONFIDENCE

B2C Recommended

62% of expected sales are direct online.

MEDIUM CONFIDENCE

CRM Recommended

Repeat visitation is expected to exceed 25%.

NOT REQUIRED

Seat Management

Venue operates general admission.

Commercial Impact

Each recommendation shows:

- Additional Monthly Cost
- Annual Cost
- Per-Ticket Impact
- Included in Contract
- Revenue/Operational Benefit
- Confidence
- Reason

Actions

Accept / Reject / Add to Package / Explain Recommendation / Review Impact

Screen 5 — Module Detail & Commercial Treatment

Purpose

Provide detailed information about an individual module before adding it to the package.

Example

Virtual Queue

Functional Overview

- Virtual reservations
- Capacity rules
- Time windows
- Customer notifications
- Priority management
- Queue analytics

Commercial Treatment

Show according to selected contract:

Standard Tier Price

AED X/month

Per-Ticket Contract

AED X/month OR Included

Hybrid

Included in Base Package

Custom Contract

Negotiated

Technical Requirements

- Mobile/B2C Dependency
- API Requirements
- Access Integration
- Notification Service

Compatibility

- ✓ B2C
- ✓ Mobile
- ✓ Access Control
- ✓ CRM

Actions

Add Module / Remove / Request Inclusion / Compare / View Dependency

Screen 6 — Module Dependency & Compatibility Manager

Purpose

Ensure that the package is technically valid before commercial approval.

Dependency Map

Example:

Virtual Queue

requires:

- Ticketing Core
- B2C or Mobile

may integrate:

- Access Control
- CRM

Validation Types

- Required Dependency
- Recommended Dependency
- Incompatible Module
- Required License
- Required Integration
- Capacity Requirement

Example Issue

Virtual Queue selected but Mobile/B2C customer interface is not enabled.

Resolution

AI suggests:

Add B2C to package.

or

Use API integration with customer's existing mobile application.

Compatibility Status

- Valid
- Warning
- Missing Dependency
- Conflict
- Approval Required

Actions

Resolve / Add Dependency / Remove Module / Request Exception / Validate Package

Screen 7 — Add-Ons, Capacity & Commercial Options

Purpose

Allow additional resources to be added without unnecessarily moving the customer to another tier.

This remains a very important TICVAI commercial principle.

Resource Add-Ons

Examples:

- +5 POS
- +10 Access Devices
- +10 Users
- +100K Admissions
- +100K Tickets
- +1M API Calls
- +100GB Storage

Capacity Table

Resource	Included	Required	Additional
POS	20	25	+5
Access	40	45	+5
Users	35	35	0
API	1M	1.8M	+800K

AI Recommendation

Instead of:

Upgrade entire package.

AI can recommend:

Keep current operational profile and add +5 POS capacity.

Per-Ticket Customer

For a per-ticket contract, the technical capacity add-on may be:

- Included
- Additional recurring fee
- One-time fee
- Contract override
- No commercial charge but approval required

Actions

Add Capacity / Remove / Compare With Upgrade / Request Temporary Capacity / Simulate

Screen 8 — Commercial Package Simulator

Purpose

Compare different ways of commercially packaging the same customer.

This screen must consume the commercial models configured in **Board 3**.

Customer Scenario

Dubai Discovery Museum

Expected:

- 750K Tickets
 - AED 120 Average Ticket Value
 - 20 POS
 - 40 Access Devices
 - 35 Users
-

Option A — Tier-Based

Enterprise + Modules

Annual Cost:

AED 240,000

Option B — Per Ticket

$750,000 \times \text{AED } 0.25$

Annual:

AED 187,500

Minimum Guarantee:

AED 15,000/month

Option C — Hybrid

Base:

AED 5,000/month

Variable:

AED 0.15/ticket

Modules:

AED 2,000/month

Projected Annual:

AED 220,500

Option D — Custom Contract

Negotiated Annual Fee:

AED 210,000

Comparison

Show:

- Monthly Equivalent
- Annual Cost
- Minimum Guarantee
- Variable Exposure
- Included Modules
- Technical Capacity
- Expected Overage
- Customer Saving

- TICVAI Revenue
- Contract Predictability

AI Recommendation

Hybrid provides better revenue predictability while maintaining customer scalability.

Actions

Compare / Select Scenario / Modify / Save / Create Proposal

Screen 9 — Package Review & Commercial Summary

Purpose

Provide the complete package before customer acceptance or internal approval.

Customer

Dubai Discovery Museum

Operational Profile

Enterprise

VSI:

67

Commercial Model

Per Ticket + Minimum Guarantee

Commercial Terms

Rate:

AED 0.75 / Billable Ticket

Minimum Guarantee:

AED 20,000/month

Billing:

Monthly

Contract:

12 Months

Billable Unit

Paid Ticket Sold

Included Technical Capacity

- 20 POS
- 40 Access Devices
- 35 Users
- 1M API Calls/month
- 200GB Storage

Modules

- Ticketing Core
- B2C
- B2B
- CRM

- Analytics
- Access Control

Estimated Commercial Value

Expected Tickets:

750,000

Projected Variable Revenue:

AED 562,500/year

Minimum Annual Guarantee:

AED 240,000

Exceptions / Discounts

Show:

- Discount
- Special Rate
- Included Module
- Free Period
- Capacity Override
- Contract Exception

Actions

Edit Package / Run Simulation / Generate Proposal / Submit for Approval

Screen 10 — Final Package Approval & Handoff

Purpose

Govern final approval of the commercial package and send the approved configuration into purchase/contract activation.

Approval Summary

Customer:

Dubai Discovery Museum

Commercial Model:

Per Ticket + Minimum Guarantee

Operational Profile:

Enterprise

Contract:

12 Months

Commercial Rate:

AED 0.75 / Ticket

Minimum Guarantee:

AED 20,000/month

Approval Workflow

Draft Package

- Commercial Review
- Finance Review
- Authorized Approval
- Customer Proposal

→ **Customer Acceptance**

→ **Approved Package**

Approval Conditions

Automatically identify:

- ✓ Standard commercial rule
- ✓ Technical capacity valid
- ✓ Module dependencies valid
- ⚠ Custom ticket rate
- ⚠ Minimum guarantee override
- ✓ Margin requirement satisfied

Approvers

- Commercial
- Finance
- Management
- Legal where required

Handoff

Once approved, Board 4 produces an immutable approved commercial package for:

Board 5 — Online Purchase, Contract & Subscription Activation

Actions

Approve / Reject / Request Changes / Generate Proposal / Send to Customer / Proceed to Contract

Board 4 — Required Package Data Model

The package should not simply contain a Tier ID.

It should contain at minimum:

Customer

→ Customer / Venue / Group

Operational

→ VSI / Operational Profile

Commercial

→ Commercial Model / Rate / Minimum Guarantee / Billing Basis / Contract Duration

Billable Definition

→ Ticket / Transaction / Percentage / Custom Event

Technical

→ POS / Access / Users / API / Storage / Venues

Functional

→ Selected Modules

Financial

→ Base / Modules / Variable Charges / Capacity / Discounts / Minimum Guarantee

Governance

→ Exceptions / Approvals / Effective Dates / Version

Critical Board 4 Rule

There is one rule I would make very clear to Softlabs:

The Package Builder shall not automatically force a customer into a higher subscription tier solely because one licensed resource exceeds the standard tier allowance. The system shall compare tier upgrade, capacity add-on, usage pricing, per-ticket/per-transaction and approved hybrid/custom commercial options where applicable.

For example:

Professional

10 POS included.

Customer needs:

12 POS.

TICVAI should not automatically say:

Upgrade to Enterprise.

It should be capable of showing:

Option 1: Professional + 2 additional POS

Option 2: Enterprise

Option 3: Hybrid/custom agreement, if authorized

and present the commercial impact.

Board 4 Output to Board 5

The final handoff should look conceptually like:

Customer: Dubai Discovery Museum

VSI: 67

Operational Profile: Enterprise

Commercial Model: Per Ticket + Minimum Guarantee

Rate: AED 0.75 / Billable Ticket

Billable Unit: Paid Ticket Sold

Minimum Guarantee: AED 20,000/month

Contract: 12 Months

POS: 20

Access: 40

Users: 35

Modules: B2C, B2B, CRM, Analytics, Access Control

Special Conditions: None

Package Version: V1.0

Approval: APPROVED

This gives **Board 5** everything required to generate the commercial order/contract, obtain acceptance and activate the subscription.

Revised Board 5 — Online Purchase, Trial & Subscription Activation

Scope of Work — 10 Screens

The screenshot displays the TICVAI Board 5 interface, titled "Board 5 — Online Purchase, Trial & Subscription Activation". The interface is organized into 10 numbered steps, each with a specific title and content area. The steps are: 1. Purchase / Trial Journey Selection, 2. Contract & Billing Cycle Selection, 3. Billing & Legal Entity Information, 4. Payment Method & Settlement Setup, 5. Trial Configuration & Conversion Rules, 6. Order & Commercial Pricing Review, 7. Commercial Agreement & Customer Acceptance, 8. Payment, Contract & Commercial Validation, 9. Subscription Confirmation & Activation, and 10. Subscription Lifecycle & Handoff. The interface includes a top navigation bar with the TICVAI logo, user information, and a "Save & Exit" button. A progress bar at the top indicates the current step. The content area for each step contains various form fields, checkboxes, and buttons. For example, Step 1 includes a "Dubai Discovery Museum" header, a "VSI Score" of 67, and options to "Buy Now", "Start Free Trial", or "Accept Commercial Proposal". Step 2 includes a "Contract Duration" selector (Monthly, 12 Months, 24 Months, Custom Term) and a "Billing Frequency" dropdown. Step 3 includes a "Billing & Legal Entity Information" section with fields for "Legal Entity Name", "Registration Number", and "VAT/Tax Number". Step 4 includes a "Payment Method" section with options for "Credit / Debit Card", "Bank Transfer", "Direct Debit", "Invoice / Credit Terms", and "Other Method". Step 5 includes a "Trial Configuration & Conversion Rules" section with a "Trial Type" selector (Free Trial, Paid Trial, Trial Credit, Limited Usage, Full Package Trial) and a "Trial Duration" dropdown. Step 6 includes an "Order & Commercial Pricing Review" section with a "Package Summary" table showing "Dubai Discovery Museum" details. Step 7 includes a "Commercial Agreement & Customer Acceptance" section with a "Bilable Unit Definition" table. Step 8 includes a "Payment, Contract & Commercial Validation" section with a "Commercial Validation" table. Step 9 includes a "Subscription Confirmation & Activation" section with a "Subscription Activated" status and a "Subscription Details" table. Step 10 includes a "Subscription Lifecycle & Handoff" section with a "Subscription Status" table and a "Recent Activity" log.

Board 5 must now support both **standard self-service subscriptions** and **negotiated commercial agreements**, including:

Tier-Based / Tier + Usage / Per-Ticket / Per-Transaction / Percentage-Based / Minimum Guarantee / Hybrid / Fixed / Custom

Board 4 answers:

What package and commercial model has been approved?

Board 5 answers:

How does the customer formally purchase/accept that package and create an active commercial subscription?

Critical Board 5 principle

The commercial agreement must preserve the exact approved pricing model, billable-unit definition, minimum guarantee, modules, capacity, contract duration and exceptions from Board 4.

Board 5 must **not recalculate or silently modify** an approved commercial package.

Screen 1 — Purchase / Trial Journey Selection

Purpose

Determine how the customer enters the commercial activation journey.

Customer Header

Dubai Discovery Museum

- Package: Approved
- VSI: 67

- Operational Profile: Enterprise
- Commercial Model: Per Ticket + Minimum Guarantee
- Package Version: V1.0

Journey Options

Buy Now

For standard approved packages.

Start Free Trial

For eligible packages/modules.

Accept Commercial Proposal

For negotiated packages.

Contract Activation

For agreements already approved offline.

Assisted Purchase

TICVAI commercial representative supports the customer.

Eligibility Rules

System determines availability based on:

- Commercial Model
- Tier
- Customer Type
- Package Value
- Discount
- Custom Pricing
- Minimum Guarantee
- Contract Exception
- Approval Status

Example

Per Ticket + Minimum Guarantee

Commercial proposal acceptance required.

Actions

Buy Now / Start Trial / Review Proposal / Continue Contract / Request Assistance

Screen 2 — Contract & Billing Cycle Selection

Purpose

Define the contractual duration and billing/reconciliation cycle.

Contract Duration

Support:

- Monthly
- 12 Months
- 24 Months
- 36 Months

- Custom Term

Billing Frequency

- Monthly
- Quarterly
- Annual
- Custom

Commercial Model

Display from Board 4:

Per Ticket + Minimum Guarantee

Variable Billing Cycle

Monthly Ticket Reconciliation

Minimum Guarantee Period

Support:

- Monthly
- Quarterly
- Annual

Example:

AED 20,000/month

or:

AED 240,000/year

Contract Dates

- Start Date
- End Date
- Renewal Date
- Billing Start Date
- First Invoice Date

Renewal

- Auto-Renew
- Manual Renewal
- Renewal Notice Period
- Price Review at Renewal

Actions

Select Term / Select Billing Cycle / Calculate Contract / Continue

Screen 3 — Billing & Legal Entity Information

Purpose

Capture the legally correct customer and billing information.

Organization Information

- Legal Entity Name
- Trade Name
- Registration Number

- Country
- Registered Address
- VAT/Tax Number
- Tax Registration Status

Billing Contact

- Name
- Email
- Telephone
- Department

Finance Information

- Billing Currency
- Tax Treatment
- Purchase Order Required
- PO Number
- Cost Center
- Invoice Delivery Method

Multi-Venue / Group Billing

Support:

Single Group Invoice

or

Separate Venue Invoices

Contract Entity

Allow:

Commercial Customer ≠ Operating Venue

Example:

Contract Entity

ABC Entertainment LLC

Operating Venue

Dubai Discovery Museum

Actions

Validate Entity / Save / Continue

Screen 4 — Payment Method & Settlement Setup

Purpose

Configure how TICVAI collects its fees.

Payment Methods

Support:

- Credit / Debit Card
- Bank Transfer
- Direct Debit
- Invoice / Credit Terms

- Other Approved Method

Payment Terms

Examples:

- Immediate
- Net 15
- Net 30
- Net 45
- Custom

For Recurring Subscription

Show:

AED X recurring monthly

For Per-Ticket Contract

Show:

Monthly variable invoice based on reconciled billable tickets.

For Minimum Guarantee

Show:

Minimum invoice: AED 20,000/month.

Percentage Model

Show:

X% of eligible transaction value.

Billing Responsibility

- Automatic Collection
- Invoice Customer
- Manual Settlement
- Enterprise Credit Account

Validation

- Payment Method Valid
- Billing Account Verified
- Credit Terms Approved
- Currency Valid
- Tax Setup Valid

Actions

Add Payment Method / Verify / Configure Terms / Continue

Screen 5 — Trial Configuration & Conversion Rules

Purpose

Configure trial terms where the selected package is trial-eligible.

Not every commercial model needs to support trials.

Trial Configuration

- Trial Start
- Trial End

- Duration
- Modules Enabled
- POS Limit
- Access Limit
- User Limit
- Transaction Limit
- Ticket Limit
- API Limit
- Storage Limit

Commercial Trial Rules

Configure:

- Free Trial
- Paid Trial
- Trial Credit
- Limited Usage
- Full Package Trial

Conversion

At trial expiry:

Auto Convert

or

Customer Confirmation Required

or

Commercial Approval Required

Per-Ticket Example

Trial:

First 5,000 billable tickets free.

After trial:

AED 0.75/ticket

AED 20K monthly minimum guarantee

Critical Rule

Trial conversion must retain:

- Tenant
- Configuration
- Products
- Users
- Venue Setup
- Transactions
- Integrations
- Operational Data

There should be **no rebuilding of the environment**.

Actions

Start Trial / Modify Trial / Approve Trial / Skip Trial

Screen 6 — Order & Commercial Pricing Review

Purpose

Show the complete financial arrangement before contractual acceptance.

This screen must adapt dynamically to the commercial model.

Example — Per Ticket + Minimum Guarantee

Commercial Model

Per Ticket + Minimum Guarantee

Rate

AED 0.75 / Billable Ticket

Minimum Guarantee

AED 20,000/month

Expected Volume

750,000 tickets/year

Projected Variable Charge

AED 562,500/year

Minimum Annual Guarantee

AED 240,000

Included Modules

- Ticketing Core
- B2C
- B2B
- CRM
- Analytics
- Access Control

Technical Capacity

- 20 POS
- 40 Access Devices
- 35 Users
- 1M API Calls/month
- 200GB Storage

Additional Charges

Show where applicable:

- Capacity Packs
- Implementation
- Professional Services
- Support
- Integrations
- Setup Fee
- Training

Discounts / Credits

Show:

- Discount Type
- Value
- Period
- Approved By
- Expiry

Actions

Edit Where Permitted / Review Details / Download Summary / Continue

Screen 7 — Commercial Agreement, Billable Definition & Customer Acceptance

Purpose

This becomes one of the **most important revised screens**.

The customer must understand and formally accept **what TICVAI considers billable**.

Commercial Agreement

Display:

- Commercial Model
 - Contracted Rate
 - Minimum Guarantee
 - Guarantee Period
 - Billing Cycle
 - Contract Duration
 - Renewal
 - Payment Terms
-

Billable Unit Definition

Example:

Billable Unit: Paid Ticket Sold

Treatment Table

Event	Commercial Treatment
Paid Ticket	Billable
Complimentary	Excluded
Refunded	Excluded
Cancelled/Void	Excluded
Reseller Ticket	Billable
Reissued Ticket	Excluded
Group Ticket	Per Individual Ticket
Membership Admission	Excluded

For a transaction contract:

Group booking containing 50 tickets = 1 billable transaction

For a per-ticket contract:

Group booking containing 50 tickets = 50 billable tickets

Customer Acceptance

Customer confirms:

- Commercial Terms
- Billable Unit Definition
- Minimum Guarantee
- Payment Terms
- Data Processing Terms
- Subscription Terms
- Contract Conditions

Digital Acceptance

Capture:

- Accepted By
- Role
- Date/Time
- Agreement Version
- IP/Session Reference where legally appropriate
- Acceptance Audit Record

Actions

View Agreement / Download / Accept / Request Changes

Screen 8 — Payment, Contract & Commercial Validation

Purpose

Perform final checks before creating the active subscription.

Validation Categories

Commercial

- ✓ Package Approved
- ✓ Commercial Model Valid
- ✓ Rate Approved
- ✓ Minimum Guarantee Valid
- ✓ Discount Approved

Contract

- ✓ Agreement Accepted
 - ✓ Contract Dates Valid
 - ✓ Renewal Terms Complete

Billing

- ✓ Billing Entity Valid
- ✓ Tax Setup Valid
- ✓ Payment Method Valid
- ✓ Currency Valid

Billable Definition

- ✓ Charging Unit Defined
- ✓ Refund Treatment Defined
- ✓ Complimentary Treatment Defined
- ✓ Group Ticket Treatment Defined

Technical

- ✓ License Profile Defined
 - ✓ Module Dependencies Valid
 - ✓ Capacity Valid

Exceptions

Example:

Custom AED 0.55 ticket rate requires final commercial authorization.

Status

READY FOR ACTIVATION

or

ACTIVATION BLOCKED

Actions

Resolve / Revalidate / Request Approval / Activate

Screen 9 — Subscription Confirmation & Commercial Activation

Purpose

Create the formal active subscription/contract record after successful validation.

Confirmation

Subscription Activated

Subscription Information

- Subscription ID
- Customer
- Package Version
- Commercial Model
- Operational Profile
- Contract Start
- Contract End
- Renewal
- Billing Frequency
- Status

Commercial Information

Example:

Rate

AED 0.75 / Billable Ticket

Minimum Guarantee

AED 20,000/month

Billable Unit

Paid Ticket Sold

License Summary

- 20 POS
- 40 Access
- 35 Users
- Selected Modules

Activation Workflow**Approved Package**

- **Contract Accepted**
- **Commercial Validation**
- **Subscription Created**
- **License Request Created**
- **Provisioning Request Created**

Handoff

Board 5 sends:

Subscription & Commercial Entitlement

to:

Board 6 — Tenant Provisioning & License Activation

Actions

View Subscription / View Contract / Download Confirmation / Start Provisioning

Screen 10 — Subscription Lifecycle & Trial-to-Paid Handoff

Purpose

Manage the immediate commercial lifecycle after purchase or trial activation and ensure clean handoff to operational provisioning.

Lifecycle

Draft

- Trial
- Pending Acceptance
- Pending Payment
- Active
- Renewal Due
- Grace
- Suspended
- Cancelled

Trial Conversion

Show:

Example:

Subscription created but license activation failed.

Actions:

Retry / Investigate / Assign / Escalate

Audit Timeline

Track:

- Package Approval
- Customer Acceptance
- Payment
- Subscription Creation
- Commercial Activation
- License Request
- Provisioning Request

Actions

Convert Trial / Retry Handoff / View Audit / Open Board 6

Revised Board 5 — Commercial Model Behavior

The UI and workflow must dynamically adapt according to the contract.

Commercial Model	Board 5 Behavior
Tier-Based	Fixed recurring subscription
Tier + Usage	Base subscription + usage terms
Per Ticket	Ticket rate + billable definition
Per Transaction	Transaction rate + transaction definition
Percentage	% rate + eligible transaction value definition
Minimum Guarantee	Guarantee amount + reconciliation period
Hybrid	Base + modules + variable component
Fixed	Fixed contractual value
Custom	Approved contract-specific structure

This should be **configuration-driven**, not separately coded purchase flows for every pricing model.

Critical Minimum Guarantee Logic

For example:

Rate: AED 0.75/ticket

Minimum Guarantee: AED 20,000/month

If monthly billable tickets = **20,000**:

Variable = AED 15,000

Minimum = AED 20,000

Billing Basis = AED 20,000

If monthly billable tickets = **40,000**:

Variable = AED 30,000

Minimum = AED 20,000

Billing Basis = AED 30,000

However, **Board 5 defines and contracts this rule.**

The actual ongoing consumption calculation belongs primarily to **Board 9**, while invoice calculation/reconciliation belongs to **Board 10**.

That separation is important to avoid duplicating functionality.

Board 5 Output to Board 6

Board 5 should produce a structured, approved subscription object similar to:

Customer: Dubai Discovery Museum

Subscription ID: SUB-000184

Package: V1.0

VSI: 67

Operational Profile: Enterprise

Commercial Model: Per Ticket + Minimum Guarantee

Rate: AED 0.75 / Ticket

Billable Unit: Paid Ticket Sold

Minimum Guarantee: AED 20,000/month

Billing: Monthly

Contract: 12 Months

POS Entitlement: 20

Access Entitlement: 40

Users: 35

Modules: B2C, B2B, CRM, Analytics, Access Control

Agreement: Accepted

Payment/Billing Setup: Validated

Commercial Status: ACTIVE

Provisioning Status: READY

Board 5 acceptance outcome

Board 5 is complete only when:

Commercial Package Approved + Customer Agreement Accepted + Billing Setup Validated + Subscription Activated + Provisioning Handoff Created.

This gives Board 6 a clean boundary: **Board 6 does not decide what the customer bought or how the customer is charged. It provisions and technically activates exactly what Board 5 sends to it.**

Board 6 — Tenant Provisioning & License Activation

Scope of Work — 10 Screens

Board Objective: Automatically provision the customer's TICVAI tenant, organization, venue structure, administrator, licensed modules, entitlements, quotas, security baseline and venue template after subscription/trial activation.

The key principle is:

The customer should not purchase TICVAI and then wait for TICVAI staff to manually create their environment.

For standard self-service customers, provisioning should be automatic.

Board Flow

Board 5 — Subscription Activated

→ Board 6 — Environment Automatically Created & Licensed

→ Board 7 — AI Setup & Guided Configuration

Screen 1 — Provisioning Command Center

Purpose

Show the overall status of the customer's environment creation.

Customer Header

Dubai Discovery Museum

Subscription: Professional

Status: Active

Provisioning: In Progress

Provisioning Progress

72% Environment Ready

Provisioning Stages

- ✓ Subscription Validated
- ✓ Tenant Created
- ✓ Organization Created
- ✓ Venue Created
- ✓ Administrator Created
- License Activation
- Module Activation
- Template Application
- Security Initialization
- Final Validation

Status Types

- Pending
- In Progress
- Completed
- Warning
- Failed
- Retry Required

Actions

[View Details](#) / [Retry Failed Step](#) / [Pause](#) / [Cancel](#) / [View Logs](#)

Screen 2 — Tenant & Organization Provisioning

Purpose

Create the customer's isolated TICVAI environment and primary organization structure.

Tenant Information

- Tenant ID
- Tenant Name
- Organization
- Country
- Region
- Currency
- Language
- Time Zone
- Subscription ID
- Environment Type

Environment Types

- Trial
- Production
- Sandbox where applicable

Example

Tenant: DDM-UAE-001

Organization: Dubai Discovery Museum

Region: UAE
Currency: AED
Time Zone: GMT+4
Environment: Production

Provisioning Status

- ✓ Tenant Created
- ✓ Database/Logical Isolation Initialized
- ✓ Organization Created
- ✓ Regional Settings Applied

Important Technical Principle

The provisioning service should perform infrastructure and tenant creation.

AI should not directly create infrastructure.

AI may orchestrate or recommend the configuration, while the governed TICVAI provisioning services execute the technical actions.

Screen 3 — Venue & Operational Structure Creation

Purpose

Automatically create the initial venue structure using information collected during onboarding.

Venue Information

From Board 2:

Dubai Discovery Museum
Museum
Dubai, UAE
Single Venue

Auto-Created Structure

Organization

└─ Dubai Discovery Museum
 ├─ Admissions
 ├─ POS
 ├─ Access
 ├─ Online Commerce
 └─ Administration

Venue Settings

- Venue Name
- Venue Type
- Address
- Time Zone
- Currency
- Operating Region
- Default Language
- Operating Model

Multi-Venue Support

For applicable customers:

Organization

Actions

[Review Structure](#) / [Add Venue](#) / [Edit](#) / [Continue](#)

Screen 4 — Administrator & Security Initialization

Purpose

Create the initial authorized customer administrator and establish the tenant security baseline.

Primary Administrator

Example:

Ahmed Khan

Role:

Customer Administrator

Security Setup

- ✓ Administrator Account Created
- ✓ Email Verified
- ✓ Tenant Access Assigned
- ✓ Default Role Applied
- ✓ Security Policy Applied
- ✓ Audit Logging Enabled

Initial Roles

Depending on template:

- Customer Administrator
- Venue Manager
- Ticketing Manager
- POS Supervisor
- Finance User
- Access Supervisor
- Reporting User

Security Controls

- MFA Policy
- Password Policy
- Session Policy
- Login Restrictions
- RBAC/PBAC
- Audit Logging

Important

Only the primary administrator may initially exist.

Additional users can later be invited through normal user management.

Screen 5 — License & Entitlement Activation

Purpose

Translate the commercial subscription purchased in Board 5 into enforceable technical entitlements.

Subscription

Professional

Included Entitlements

Entitlement	Licensed
POS	10 + 2 Additional
Access Devices	20
Users	20
Annual Attendance	500K
Transactions	500K
API Calls	500K
Storage	100GB

License Information

- License ID
- Subscription ID
- Tier
- Start Date
- Expiry/Renewal
- Grace Period
- Status

License Status

 **ACTIVE**

Enforcement

Each entitlement shall inherit the appropriate:

- Hard Limit
- Soft Limit
- Overage Rule
- Warning Threshold
- Approval Rule

These rules come from Board 3.

Screen 6 — Module Activation & Dependency Validation

Purpose

Activate the modules purchased in Board 4/5 and verify all required dependencies.

Purchased Modules

- ✓ B2C Commerce
- ✓ B2B / Reseller
- ✓ Membership & Loyalty
- ✓ CRM & Marketing

Activation Status

Module	License	Dependency	Activation
B2C	Valid	Passed	Active
B2B	Valid	Passed	Active
Membership	Valid	Passed	Active
CRM	Valid	Passed	Active

Dependency Validation

Example:

B2C requires Core Ticketing → ✓ Available

CRM requires Customer Profile Services → ✓ Available

Failure Example

● Module Activation Failed
Required dependency unavailable.

Actions

Retry / View Dependency / View License / Escalate

Screen 7 — Venue Template Application

Purpose

Apply an appropriate initial configuration template based on the venue assessment from Board 2.

Recommended Template

Museum — Standard Admission

Template Includes

- Basic Venue Structure
- Operating Calendar Structure
- Admission Product Templates
- Ticket Type Templates
- Standard Sales Channels
- POS Configuration Structure
- Access Configuration Structure
- Basic User Roles
- Standard Reports

- Customer Communication Templates

AI Recommendation

Based on your venue profile, the Museum Standard Admission template provides the closest starting configuration.

Options

Apply Recommended Template

Choose Another Template

Start Without Template

Important

The template provides a **starting configuration**, not an irreversible setup.

The customer can modify everything permitted by their subscription and permissions.

Screen 8 — Initial Configuration & Regional Defaults

Purpose

Apply safe initial defaults using information already provided during onboarding.

Example

Country

UAE

Currency

AED

Time Zone

GMT+4 Dubai

Language

English

Venue Type

Museum

Operating Hours

09:00–18:00

Sales Channels

POS + B2C + B2B

AI-Prepared Configuration

AI may prepare:

- Initial operating calendar
- Draft ticket products
- Draft prices
- Basic channel assignments
- Basic access setup
- Initial reports
- Communication templates

Governance

Separate configuration into:

Auto-Applied

Low-risk settings such as:

- Currency
- Time Zone
- Language
- Venue Type

Review Required

Business-critical settings such as:

- Ticket prices
- Tax
- Refund policy
- Payment rules
- Access rules
- Settlement
- Capacity

Example:

6 configuration items require customer review.

These items move into Board 7.

Screen 9 — Provisioning Validation & Exception Management

Purpose

Validate that the environment has been created correctly before handing it to customer configuration.

Validation Checklist

- ✓ Tenant Created
- ✓ Organization Created
- ✓ Venue Created
- ✓ Administrator Active
- ✓ Subscription Linked
- ✓ License Active
- ✓ Entitlements Applied
- ✓ Modules Activated
- ✓ Template Applied
- ✓ Security Initialized

Exception Example

● B2C Module Activation Failed

Reason:

Payment configuration service unavailable.

Exception Information

- Error ID
- Component
- Severity
- Timestamp

- Retry Status
- Technical Owner

Actions

Retry Step / Retry All / Assign Technical Team / View Technical Log / Override where authorized

Critical Principle

One failed component should not result in an invisible partially provisioned tenant.

TICVAI must clearly identify:

What succeeded, what failed and what must happen next.

Screen 10 — Environment Ready & Handoff to AI Setup

Purpose

Confirm that provisioning is complete and move the customer into Board 7.

Success

 Your TICVAI Environment Is Ready

Environment Summary

Customer

Dubai Discovery Museum

Tenant

DDM-UAE-001

Subscription

Professional

Modules

4 Active

Licensed POS

12

Access Devices

20

Users

20

Annual Attendance

500K

Provisioning Status

- ✓ Tenant Ready
- ✓ Venue Ready
- ✓ License Active
- ✓ Modules Active
- ✓ Security Ready
- ✓ Template Applied

Configuration Status

Initial Configuration: 42%

This is important:

Environment Ready ≠ Go Live Ready

The technical environment has been successfully created, but the customer still needs to complete their operational configuration.

AI Message

“Your TICVAI environment is ready. I've already prepared the initial setup based on the information you provided. Let's complete the remaining configuration together.”

Actions

Start AI-Guided Setup

Configure Manually

Review Environment

This hands the customer directly to **Board 7**.

Board 6 — Provisioning Architecture

I would make the following architecture very clear to Softlabs:

Commercial Engine

Determines:

- What the customer purchased.

Licensing Engine

Determines:

- What the customer is allowed to use.

Provisioning Engine

Creates:

- The customer's environment.

AI Configuration Engine

Determines/prepares:

- How the environment should initially be configured.

- They are connected but should **not be treated as one component**.

For example:

- Customer purchases Professional + B2C.

Board 5 activates the subscription.

↓

Licensing Engine generates:

- Professional + B2C entitlement.

↓

Provisioning Engine creates:

- Tenant + Organization + Venue + Admin + Module services.

↓

AI Configuration prepares:

Museum configuration based on onboarding information.
This separation will make the architecture much cleaner.

Board 6 — Zero-Touch Requirement

For standard Essential and Professional customers, the target should be:

Payment Successful

↓

Subscription Automatically Activated

↓

Tenant Automatically Created

↓

License Automatically Generated

↓

Modules Automatically Activated

↓

Venue Template Automatically Applied

↓

Administrator Automatically Created

↓

Initial Configuration Prepared

↓

Customer Receives “Environment Ready”

No TICVAI employee should need to manually create the customer tenant under normal conditions.
Enterprise workflows may still require approvals or managed provisioning.

Board 6 — Trial Handling

If Board 5 creates a trial:

Tenant Type = Trial

The same provisioning process should run, but with trial-specific entitlements.

When converted to paid:

Do not create another tenant.

Instead:

Existing Trial Tenant

- Paid Subscription Assigned
 - Production License Applied
 - Paid Entitlements Activated
 - Trial Restrictions Removed
 - Existing Configuration Retained
-

Board 6 — Final Output

Board 6 should produce:

Tenant: DDM-UAE-001

Organization: Dubai Discovery Museum

Venue: Dubai Discovery Museum

Subscription: Professional

License: Active

Modules: 4/4 Active

Administrator: Active

Template: Museum Standard Admission

Security: Initialized

Regional Defaults: Applied

Provisioning: 100%

Initial Configuration: 42%

Environment Status: READY FOR CONFIGURATION

The customer then moves to:

Board 7 — AI Setup & Guided Configuration

Board 7 will be particularly important because this is where the concept we discussed—the customer configuring TICVAI themselves using AI or normal screens—becomes an actual user experience.

Board 7 — AI Setup & Guided Configuration

Scope of Work — 10 Screens

Board Objective: Enable customers to complete their TICVAI configuration independently using a combination of AI-guided setup, natural-language configuration, venue templates, guided tasks, and traditional manual configuration.

Board Flow

Board 6 — Environment Ready

→ Board 7 — Configure the Operation

→ Board 8 — Validate & Go-Live

Screen 1 — AI Setup Command Center

Purpose

Provide the customer with one central place to understand the overall configuration status and what needs to be completed.

Header

Dubai Discovery Museum

Professional | Museum | Production Environment

Setup Progress

42% Configuration Complete

Configuration Areas

Area	Status
Organization	✓ Complete
Venue	✓ Complete
Operating Calendar	In Progress
Ticket Products	In Progress
Pricing	Review Required
POS	Pending
B2C	Pending
B2B	Pending
Access Control	Pending
Payment	Pending

AI Next Best Action

Recommended Next Step: Complete your ticket products

I already prepared Adult, Child and Under-3 admission products based on your onboarding information.

Actions

Continue with AI

Configure Manually

View All Tasks

Screen 2 — Guided Setup Plan

Purpose

Turn a complex TICVAI implementation into a simple sequence of configuration tasks.

Instead of expecting the customer to understand all TICVAI modules, the system creates a personalized setup plan.

Example Setup Journey

1. Organization & Venue ✓
2. Operating Hours ✓
3. Ticket Products ●

4. Pricing & Tax

5. POS Setup

6. Payment Gateway

7. B2C Store

8. B2B Channels

9. Access Control

10. Test & Validate

Each Task Shows

- Status
- Estimated time
- Required/Optional
- Dependency
- AI available
- Manual configuration available

Example

Configure Ticket Products

Estimated: 5 minutes
Required for Go-Live
AI Draft Available

Actions

Start Task / Ask AI / Configure Manually / Skip Optional Task

Screen 3 — AI Configuration Workspace

Purpose

Allow the customer to configure TICVAI using natural language.

This is the main AI configuration screen.

Example Conversation

Customer:

“Create an Adult Museum Admission ticket for AED 50.”

AI:

I'll prepare the following product:

Adult Museum Admission

Price: AED 50

Currency: AED

Admission: 1

Venue: Dubai Discovery Museum

Sales Channels: POS + B2C + B2B

Configuration Preview

Before committing:

AI-Prepared Configuration

Actions

Approve & Create

Modify

Cancel

Another Example

Customer:

“Every Friday we stay open until 10 PM.”

AI prepares:

Friday Operating Hours

Current: 09:00–18:00

Proposed: 09:00–22:00

Approve Change

The AI must show what it intends to change before executing governed configuration actions.

Screen 4 — AI Draft Review & Approval

Purpose

Provide structured review of AI-generated configuration before it is committed.

Pending AI Configurations

Example:

Adult Admission

Status:

Awaiting Approval

Changes:

- Product: Adult Admission
 - Price: AED 50
 - Validity: Visit Date
 - Admission: 1
 - POS: Enabled
 - B2C: Enabled
 - B2B: Enabled
-

Child Admission

AED 25

Under-3 Admission

AED 0

Validation

- ✓ Required fields complete
- ✓ No product conflict
- ✓ Currency valid
- ✓ Channels available

Risk Level

 Low Risk

Actions

Approve / Modify / Reject / Approve All

Important

High-impact configurations should have stronger approval requirements than simple low-risk configuration.

Screen 5 — Manual Configuration Center

Purpose

Allow customers who prefer traditional administration to configure TICVAI without AI.

Configuration Categories

Venue

- Venue Details
- Operating Calendar
- Capacity

Ticketing

- Products
- Ticket Types
- Pricing
- Validity
- Entitlements

Commerce

- POS
- B2C
- B2B

Operations

- Access
- Resources
- Queue

Customer

- CRM
- Membership

Finance

- Payment
- Tax
- Settlement

Search

“What do you want to configure?”

AI Assistance

Even inside manual configuration, contextual AI assistance may be available:

- “Explain this setting”
- “Recommend a value”
- “Check my configuration”

Critical Architecture

AI configuration and manual configuration must modify the **same underlying configuration objects**.

Screen 6 — Venue, Calendar & Operational Setup

Purpose

Provide a guided workspace for the fundamental venue configuration.

Venue

- Venue Name
- Location
- Venue Type
- Currency
- Time Zone
- Language

Operating Calendar

Example:

Day	Hours
Monday	09:00–18:00
Tuesday	09:00–18:00
Wednesday	09:00–18:00
Thursday	09:00–18:00
Friday	09:00–22:00
Saturday	09:00–18:00
Sunday	09:00–18:00

Exceptions

- Public Holidays
- Special Events
- Closed Days
- Ramadan Hours
- Seasonal Hours

AI Recommendation

UAE public holidays can be added to your exception calendar. Review before applying.

Actions

Save / Ask AI / Add Exception / Copy Schedule

Screen 7 — Product, Pricing & Sales Channel Setup

Purpose

Configure the customer's initial products and where they can be sold.

Example Products

Product	Price	POS	B2C	B2B	Status
Adult	AED 50	✓	✓	✓	Ready
Child	AED 25	✓	✓	✓	Ready
Under 3	Free	✓	✓	—	Ready
Family	AED 120	✓	✓	—	Draft

AI Creation

Customer can type:

“Create a family ticket for two adults and two children for AED 120.”

AI prepares:

Family Admission

Entitlements:

2 Adult + 2 Child

Price:

AED 120

Configuration

- Price
- Tax
- Validity
- Capacity
- Eligibility
- Sales Channels
- Ticket Media

Actions

Create Product / Edit / Ask AI / Publish Later

Screen 8 — POS, Payment & Access Setup

Purpose

Guide the customer through the key operational configuration required to actually sell and validate tickets.

POS

Purchased entitlement:

12 POS

Configured:

6/12

Configure:

- POS Name
- Location
- Device
- Sales Profile
- Payment Methods
- Receipt
- User Assignment

Payment

Status:

Payment Gateway Not Connected

Actions:

Connect Gateway

Configure Payment Methods

Run Test Payment

Access

Licensed:

20 Devices

Configured:

10

Configure:

- Gate
- Reader
- Entry/Exit
- Ticket Rules
- Re-entry
- Validation Mode

AI Insight

Payment gateway configuration is currently blocking B2C go-live.

Screen 9 — Configuration Health & AI Review

Purpose

Allow AI to analyze the complete configuration and identify missing, inconsistent, or potentially incorrect settings before formal go-live validation.

Configuration Health

84% Healthy

Results

Complete

- Venue
- Operating Calendar
- Products
- Prices
- POS

Warning

Family Ticket has no B2B channel.

Saturday peak attendance may exceed configured capacity.

Blocking

Payment Gateway Not Verified

Access Gate 3 Not Tested

AI Review

“I found 2 blockers and 3 recommendations.”

Recommendations

1. Verify payment gateway

Required for:

B2C Go-Live

2. Test Access Gate 3

Required for:

Admission Go-Live

Actions

[Fix with AI](#) / [Fix Manually](#) / [View Details](#) / [Recheck](#)

Screen 10 — Setup Completion & Handoff to Go-Live

Purpose

Confirm that customer configuration is sufficiently complete to begin formal Board 8 validation.

Configuration Summary

Dubai Discovery Museum

Configuration: 100% Required Tasks Completed

Areas

- ✓ Organization
- ✓ Venue
- ✓ Calendar
- ✓ Products
- ✓ Pricing

- ✓ POS
- ✓ Payment
- ✓ B2C
- ✓ B2B
- ✓ Access

AI Summary

Your required operational configuration is complete.

Important Distinction

This screen must **not** say:

“You are live.”

Instead:

READY FOR GO-LIVE VALIDATION

Because Board 8 still needs to test the environment.

Actions

Start Go-Live Validation

Review Configuration

Export Configuration Summary

This hands the customer to Board 8.

Board 7 — AI Governance Model

This is one of the most important requirements for Softlabs.

AI actions should follow:

Customer Request

↓

AI Understands Intent

↓

AI Creates Configuration Proposal

↓

TICVAI Validation Engine

↓

Customer Review / Approval where required

↓

TICVAI Configuration API

↓

Configuration Saved

↓

Audit Record

AI should **never directly write into the database**.

Board 7 — Risk-Based AI Approval

Not every AI action needs the same approval level.

Low Risk

Example:

Change Friday closing time from 18:00 to 22:00.

Potentially:

Customer Confirmation

Medium Risk

Example:

Change Adult Admission from AED 50 to AED 60.

Require:

Explicit Review & Approval

High Risk

Example:

Change tax configuration.

Require:

Authorized Role + Approval Workflow

Critical

Examples:

- Payment settlement
- Financial configuration
- Access security
- Privacy settings

Require appropriate governed authorization.

This should be configurable rather than hard-coded.

Board 7 — AI Must Understand Existing Configuration

AI should not behave like a generic chatbot.

For example, if the customer asks:

“Can I create another POS?”

AI should know:

Licensed POS: 12

Configured POS: 12

and respond:

“All 12 licensed POS terminals are currently allocated. I can help you request additional POS capacity or review your existing terminals.”

Similarly:

“Add Virtual Queue.”

AI should know whether:

- Virtual Queue is licensed
- Required dependencies exist
- Customer permissions allow activation

- Commercial approval is required

If not licensed:

“Virtual Queue is not included in your current subscription. I can show you the module and estimated commercial impact.”

Then the customer can be routed back to the commercial workflow.

Board 7 — Configuration Progress Logic

Setup progress should **not simply count screens completed**.

Each activated module should contribute mandatory configuration requirements.

For example:

Core Ticketing

Requires:

- Venue
- Calendar
- Product
- Pricing

B2C

Requires:

- Product
- Online Channel
- Payment
- Ticket Delivery

Access

Requires:

- Gate
- Device
- Validation Rule
- Test Scan

Therefore, if the customer activates another module, the setup checklist dynamically expands.

Board 7 — Final Output

Board 7 should produce a structured configuration status such as:

Tenant: Dubai Discovery Museum

Venue Configuration: Complete

Operating Calendar: Complete

Products: 4 Configured

POS: 6 Configured

Payment: Connected & Tested

B2C: Configured

B2B: Configured

Access: 10 Devices Configured

Required Tasks: 100%

Configuration Health: 96%

Blocking Configuration Issues: 0

Status: READY FOR GO-LIVE VALIDATION

This is then passed to:

Board 8 — Go-Live Readiness & Validation

Board 8 should **not repeat configuration**. Its job will be to test what Board 7 configured—test purchases, payments, ticket generation, QR/access validation, permissions, communications, integrations, blockers, readiness scoring, and final production go-live approval.

Board 8 — Go-Live Readiness & Validation

Scope of Work — 10 Screens

Board Objective: Board 8 is the final quality and operational control layer between configuration and production launch.

Board 7 answered:

“Have we configured the customer environment?”

Board 8 answers:

“Has everything been tested, validated, and proven safe to go live?”

The flow is:

Board 7 — Configuration Complete

→ **Board 8 — Automated Validation & Testing**

→ **Customer Approval**

→ **Production Go-Live**

A small Essential customer should be able to complete this entire process without mandatory TICVAI assistance.

Screen 1 — Go-Live Readiness Command Center

Purpose

Provide one central dashboard showing whether the customer is ready for production.

Header

Dubai Discovery Museum

Professional | Production Environment

Overall Readiness

Go-Live Readiness: 82%

Validation Areas

Area	Status
Configuration	✓ Passed
Ticketing	✓ Passed
Sales Channels	✓ Passed
Payment	Testing
Ticket Generation	✓ Passed
Access Control	Warning
Users & Security	✓ Passed
Communications	Warning
Integrations	✓ Passed
Operational Readiness	Pending

Summary

- 34 Tests Passed
- 3 Warnings
- 1 Blocker
- 4 Tests Pending

Actions

Run All Validations

View Blockers

Continue Testing

Ask AI

Screen 2 — Automated Validation Plan

Purpose

Automatically create the correct testing plan based on what the customer has actually purchased and configured. TICVAI should **not use the same checklist for every customer**.

For example, if the customer purchased:

- Ticketing
- POS
- B2C
- B2B
- Access Control

the system automatically creates the relevant validation plan.

Validation Categories

Core Platform

- Venue configuration
- Calendar
- Users
- Permissions

Ticketing

- Product
- Price
- Validity
- Capacity
- Entitlements

Commerce

- POS
- B2C
- B2B

Payment

- Authorization
- Capture
- Refund

Access

- QR validation
- Entry
- Exit
- Re-entry

Communication

- Confirmation
- Ticket Email

Test Status

Pending / Running / Passed / Warning / Failed / Not Applicable

Actions

Run All / Run Selected / Re-run Failed / View Test

Screen 3 — Ticketing & Product Validation

Purpose

Validate that configured products can actually operate correctly.

Example Test Products

Product	Price	Validity	Capacity	Entitlement	Result
Adult Admission	AED 50	✓	✓	✓	Passed

Product	Price	Validity	Capacity	Entitlement	Result
Child Admission	AED 25	✓	✓	✓	Passed
Under 3	AED 0	✓	✓	✓	Passed
Family Admission	AED 120	✓	Warning	✓	Warning

Automated Checks

System validates:

- Product publication
- Price
- Currency
- Tax
- Validity
- Schedule
- Capacity
- Eligibility
- Entitlements
- Sales channels
- Ticket media
- Dependencies

AI Finding

Family Admission has no B2B channel assigned.

Actions

Fix Configuration

Ask AI to Fix

Accept Warning

Re-Test

If fixing is required, Board 8 can route the customer back to the relevant Board 7 configuration screen and then return to validation.

Screen 4 — End-to-End Sales Channel Testing

Purpose

Test the real customer transaction journey across each activated sales channel.

Channels

POS

Test:

Select Product → Add Customer → Payment → Issue Ticket

Status:

✓ Passed

B2C

Test:

Browse → Select Ticket → Checkout → Payment → Ticket Delivery

Status:

✓ Passed

B2B

Test:

Partner Login → Allocation → Booking → Ticket Issue

Status:

⚠ Warning

Mobile App

If activated:

Product → Checkout → Wallet / Ticket

Test Details

- Transaction ID
- Product
- Channel
- Price
- Payment
- Ticket ID
- Timestamp
- Result

Actions

Run Test / View Journey / View Logs / Re-Test

Screen 5 — Payment & Financial Validation

Purpose

Confirm that payment, taxation, refunds, and financial configuration work before accepting real customer money.

Payment Gateway

Connected

Validation Tests

Test	Status
Gateway Connection	✓ Passed
AED Payment	✓ Passed
Authorization	✓ Passed
Capture	✓ Passed
Failed Payment Handling	✓ Passed
Refund	✓ Passed

Test	Status
Tax Calculation	✓ Passed
Settlement Configuration	Warning

Example Test

Test Transaction
Adult Admission
AED 50

Result:

Payment Successful

Refund Test

AED 50 → Refund Successful

Financial Validation

- Tax profile
- Currency
- Payment method
- Refund policy
- Settlement account
- Finance mapping

Important

Live payment credentials and settlement configuration must require appropriate authorization.

Actions

Run Payment Test / Run Refund Test / Fix Issue / Re-Test

Screen 6 — Ticket, QR & Access Validation

Purpose

Validate the complete journey from ticket creation to physical admission.

Test Journey

Purchase

- Ticket Generated
- QR Created
- Reader Scan
- Validation
- Gate Decision
- Attendance Updated

Tests

Validation	Result
QR Generated	✓
Valid Ticket Scan	✓

Validation	Result
Duplicate Scan	✓ Rejected
Expired Ticket	✓ Rejected
Cancelled Ticket	✓ Rejected
Wrong Date	✓ Rejected
Entry	✓
Exit	✓
Re-entry	Warning
Offline Validation	✓

Gate Example

Gate 1

Reader: HID

Result:

● VALID — OPEN

Invalid Test

● DUPLICATE TICKET — REJECT

Actions

Run Scan Test / Test Offline / Test Re-entry / View Logs

This validates the configuration; it does **not replace the Access Control module's operational management screens.**

Screen 7 — User, Security & Integration Validation

Purpose

Verify that the environment is technically and operationally secure before launch.

User & Permission Tests

- Administrator login
- Cashier login
- Supervisor login
- Restricted function test
- Role permissions
- Approval rights
- MFA
- Session controls

Example

Cashier attempts:

Change Product Price

Expected:

Access Denied

Result:

✓ Passed

Integration Validation

Integration	Status
Payment Gateway	Connected
Access Control	Connected
CRM	Connected
ERP	Warning
Email Service	Connected

API Tests

- Authentication
- Connectivity
- Request
- Response
- Timeout
- Error handling

Actions

Test Permissions / Test Connection / View API Logs / Re-Test

Screen 8 — Communication & Customer Journey Validation

Purpose

Ensure that the customer receives the correct information throughout the booking journey.

Communication Tests

Booking Confirmation

- ✓ Email generated
- ✓ Customer name correct
- ✓ Product correct
- ✓ Date/time correct
- ✓ Price correct

Ticket Delivery

- ✓ PDF attached
 - ✓ QR displayed
 - ✓ Wallet link available where applicable

Refund

- ✓ Refund confirmation

Reschedule

- ✓ Updated ticket delivered

Preview

Customer can preview:

Confirmation Email

Ticket PDF

Mobile Ticket

Refund Email

Test Recipient

Use designated test recipient rather than real production customers.

Actions

Send Test / Preview / Edit Template / Re-Test

Screen 9 — Blocker, Warning & AI Resolution Center

Purpose

Bring all readiness problems into one actionable screen instead of forcing the customer to search through the system.

Issues

● BLOCKER

Payment Settlement Account Not Verified

Impact:

B2C cannot go live.

Recommended Action:

Verify settlement account.

● WARNING

Gate 3 Re-entry Test Failed

Impact:

Re-entry may not work correctly.

AI Recommendation:

Review Gate 3 re-entry policy and repeat validation.

● WARNING

B2B Confirmation Template Missing

Impact:

B2B customers may not receive booking confirmation.

AI Resolution

For supported issues:

Fix with AI

AI prepares the configuration change and shows it for approval.

Other Actions:

Fix Manually

Re-Test

Assign

Authorized Override

Override Governance

A blocker should **not simply be dismissible**.

Where override is permitted, capture:

- Reason
- User
- Role
- Approval
- Timestamp
- Expiry where applicable

Some critical blockers should be non-overridable.

Screen 10 — Final Go-Live Approval & Production Launch

Purpose

Provide the final controlled decision to activate production operation.

Final Readiness

100% READY

Summary

- ✓ Configuration Validated
- ✓ Ticketing Passed
- ✓ POS Passed
- ✓ B2C Passed
- ✓ B2B Passed
- ✓ Payment Passed
- ✓ Ticket Generation Passed
- ✓ Access Passed
- ✓ Security Passed
- ✓ Communications Passed
- ✓ Integrations Passed

Validation Results

- 48 Passed
- 0 Blockers
- 2 Accepted Non-Critical Warnings

Customer Declaration

I confirm that I have reviewed the configuration and validation results and authorize activation of the production environment.

Authorized By

- Name

- Role
- Date
- Time

Actions

APPROVE & GO LIVE

Download Validation Report

Return to Configuration

Successful Activation

TICVAI IS LIVE

Environment:

Production

Subscription:

Active

Operational Status:

LIVE

Board 8 — Readiness Scoring Logic

I recommend we **do not calculate readiness simply as “48 of 50 tests passed = 96%.”**

Tests should have different severity.

For example:

Critical

- Payment
- Ticket generation
- Access validation
- Security

Mandatory

- Product
- Price
- Tax
- Sales channel

Recommended

- Email templates
- Optional reporting configuration

Therefore:

A customer could technically have **98% of tests passed but still NOT be ready** because one critical payment test failed.

The rule should be:

Readiness Score + Critical Blocker Status = Go-Live Decision

Board 8 — AI Role

AI should make Board 8 much easier for a small customer.

Instead of displaying:

ACCESS_VALIDATION_ERROR_304

AI should explain:

“Gate 3 rejected the test ticket because re-entry is disabled for this product. You can enable re-entry or keep the current rule and mark this test as not required.”

Then provide:

Fix with AI | Fix Manually | Explain More

This supports our original goal that an **Essential customer can implement TICVAI without needing a TICVAI implementation consultant.**

Board 8 — Final Output

Board 8 produces a formal **Go-Live Readiness Record**:

Customer: Dubai Discovery Museum

Environment: Production

Validation Plan: V1.0

Tests Executed: 50

Passed: 48

Accepted Warnings: 2

Failed: 0

Critical Blockers: 0

Readiness: 100%

Customer Approval: Approved

Go-Live Status: LIVE

Activation Timestamp: Recorded

Audit Record: Created

This completes the **zero-touch onboarding lifecycle** we designed from Boards 2–8.

After go-live, the customer moves into **Board 9 — Usage, Quotas & License Enforcement**, where TICVAI starts continuously monitoring what the customer is actually consuming against the commercial entitlements purchased.

Board 9 — Usage, Quotas & License Enforcement

Revised Board 9 — Usage, Commercial Consumption, Quotas & License Enforcement

Scope of Work — 10 Screens

Board 9 requires a significant revision because TICVAI must now monitor **two different types of consumption**:

- Operational / Technical Usage** — POS, access devices, users, API calls, storage, admissions, modules, etc.
- Commercial / Billable Consumption** — tickets sold, transactions, eligible transaction value, billable events, etc.

These must **never be assumed to be the same**.

Board 9 measures and determines consumption. Board 10 converts approved commercial consumption into charges and invoices.

For example:

100,000 tickets sold

82,000 visitors admitted

If the contract says **AED 0.75 per Paid Ticket Sold**, Board 9 reports **100,000 billable tickets**, not 82,000 admissions.

Screen 1 — Usage & License Command Center

Purpose

Provide a real-time consolidated view of technical usage, commercial consumption and license health.

Customer Header

Dubai Discovery Museum

- Subscription: SUB-000184

- Commercial Model: Per Ticket + Minimum Guarantee
- Operational Profile: Enterprise
- Contract Status: Active
- Renewal: 30 Sep 2027
- License Health: Healthy

A. Commercial Consumption Cards

- Tickets Sold
- Billable Tickets
- Transactions
- Billable Transactions

Critical Display

Show separately:

Commercial Charging Model: Per Ticket

and

Technical Licensing Profile: Enterprise

Actions

[View Entitlement](#) / [View Package](#) / [Check Synchronization](#) / [View Audit](#)

Screen 3 — Commercial Consumption & Billable Event Metering

Purpose

This is the **major new Board 9 screen**.

Meter the events that determine the customer's variable commercial charges.

Billable Unit

Paid Ticket Sold

Contracted Rate

AED 0.75 / Billable Ticket

Current Period

01–30 September 2026

Consumption Summary

Event	Raw Volume	Billable Volume	Excluded
Paid Tickets	31,420	31,420	0
Complimentary	2,100	0	2,100
Refunded	780	0	780
Cancelled/Void	310	0	310
Reseller Tickets	6,200	6,200	0
Reissued Tickets	190	0	190

Total

Billable Tickets: 37,620

Other Supported Metering Bases

- Ticket Sold
- Ticket Issued
- Paid Ticket
- Transaction
- Admission
- Gross Transaction Value
- Net Transaction Value
- Custom Billable Event

Breakdown

Allow drill-down by:

- Product
- Ticket Type
- Date
- Market

Actions

[View Events](#) / [Drill Down](#) / [Export Consumption](#) / [View Contract Definition](#) / [Reconcile](#)

Screen 4 — Operational Usage & Threshold Monitor

Purpose

Monitor technical and operational consumption against licensed capacity.

Usage

Resource	Allowed	Used	Usage
POS	25	23	92%
Access	40	36	90%
Users	35	29	83%
API	1M	780K	78%
Storage	200GB	164GB	82%

Standard Thresholds

0–69%

Normal

70%

Information

80%

Warning

90%

Commercial Recommendation

100%

Limit / Overage / Enforcement

Forecast

Example:

POS utilization expected to reach 100% within 18 days.

Storage expected to exceed allowance within 42 days.

Actions

View Resource / Review Forecast / Add Capacity / Review Commercial Options

Screen 5 — License Enforcement & Decision Engine

Purpose

Apply the correct technical enforcement behavior when licensed resources reach or exceed limits.

Enforcement Types

Hard Limit

Block additional consumption.

Example:

POS licensed: 25

Active: 25

Requested: +1

Decision: BLOCK

Soft Limit

Allow continued use and generate warning/overage.

Overage

Continue operation and record additional consumption.

Approval

Require authorized temporary or permanent capacity.

Recommended Default Behavior

Resource	Recommended Enforcement
POS	Hard / Approval
Access Devices	Hard / Approval
Users	Configurable
Admissions	Soft / Overage
Transactions	Soft / Overage
API	Soft / Throttle / Overage
Storage	Soft / Overage
Modules	Hard
License Expiry	Grace → Restricted/Suspended

Decision Details

Display:

- Requested Action
- Current Entitlement
- Current Consumption
- Rule
- Decision
- Reason
- Override Allowed
- Required Approval

Actions

Approve / Reject / Request Capacity / Temporary Override / View Rule

Screen 6 — Minimum Guarantee & Variable Consumption Monitor

Purpose

Track the commercial consumption position against contractual minimum guarantees.

This screen **does not issue the invoice**. It provides Board 10 with the reconciled consumption basis.

Example

Commercial Model:

Per Ticket + Minimum Guarantee

Rate:

AED 0.75/ticket

Minimum Guarantee:

AED 20,000/month

Current Month

Billable Tickets:

31,420

Variable Value:

AED 23,565

Minimum Guarantee:

AED 20,000

Current Position:

Variable Consumption Above Minimum by AED 3,565

Break-Even Volume

Automatically calculate:

Minimum Guarantee ÷ Ticket Rate

AED 20,000 ÷ AED 0.75

26,667 tickets

Progress Visualization

0 → 26,667 Minimum Guarantee Break-Even → Current 31,420

Forecast

AI:

Projected month-end billable tickets: 43,800

Projected variable billing basis: AED 32,850

Annual Guarantee

Where applicable show:

- YTD Billable Consumption
- Annual Minimum
- Remaining Guarantee
- Forecast Annual Position

Actions

[View Contract](#) / [View Consumption](#) / [Forecast](#) / [Send to Billing Review](#)

Screen 7 — Overage, Capacity & Temporary Exception Management

Purpose

Manage technical capacity above standard entitlement and temporary operational requirements.

Overage Summary

Resource	Included	Actual	Overage
Admissions	500K	535K	+35K
API	1M	1.2M	+200K
Storage	200GB	215GB	+15GB

Commercial Options

For each overage show:

Continue Overage

Buy Capacity Pack

Upgrade Technical Profile

Request Temporary Capacity

Contract Override

Example

Customer requires:

+5 POS for 3-day event.

Temporary Capacity Request

Fields:

- Resource

AI Recommendation

Temporary +5 POS is more cost-effective than permanent expansion for this three-day event.

Actions

Create Request / Approve / Reject / Add Pack / Compare Options

Screen 8 — Usage Alerts, Reconciliation & Exception Center

Purpose

Provide a central operational center for consumption alerts and commercial metering exceptions.

Alert Categories

Commercial

- Billable volume anomaly
- Minimum guarantee approaching
- Unexpected transaction drop
- Unreconciled ticket events
- Contract definition mismatch

Technical

- POS 90%
- Access 90%
- User capacity
- API threshold
- Storage threshold
- License expiry

Metering

- Duplicate event
- Missing transaction
- Late-arriving transaction
- Refund after billing period
- Reissued ticket mismatch
- Reseller reconciliation issue

Example Exception

B2B reseller reported 6,250 tickets.

TICVAI commercial meter contains 6,200.

Difference:

50 Tickets

Status:

Reconciliation Required

Exception Actions

Investigate / Reconcile / Exclude / Include / Assign / Escalate

Notifications

Configure recipients:

- Customer Admin
- TICVAI Commercial
- Finance
- Operations
- Technical Support

Channels:

- In-App

- Email
 - SMS where enabled
 - Webhook/API
-

Screen 9 — AI Usage Forecast & Commercial Optimization

Purpose

Use AI to forecast operational and commercial consumption and recommend appropriate action.

Forecast

Example:

Current Billable Tickets

31,420

Projected Month-End

43,800

Projected Annual

790,000

Commercial Forecast

Current contract:

AED 0.75/ticket + AED 20K minimum

Projected Annual Variable:

AED 592,500

Technical Forecast

- POS: 100% in 18 days
- Access: 94% next month
- API: +17% expected
- Storage: +22% expected

AI Recommendations

Capacity

Add +5 POS capacity.

Commercial

Minimum guarantee is unlikely to apply based on current volume.

Optimization

At renewal, Hybrid Model may reduce customer cost by approximately AED X while maintaining TICVAI revenue predictability.

Downgrade

10 licensed users have remained unused for 6 months.

Every Recommendation Must Show

- Recommendation
- Evidence
- Financial Impact
- Operational Impact

- Confidence
- Effective Timing

Actions

Simulate / Create Opportunity / Request Capacity / Send to Board 10 / Dismiss

Screen 10 — License, Metering & Commercial Synchronization Audit

Purpose

Ensure that the approved contract, subscription, license and actual metering configuration remain synchronized.

Synchronization Chain

Approved Commercial Package

- Subscription
- Commercial Contract
- License
- Technical Entitlements
- Billable Unit Rules
- Usage Meter
- Board 10 Billing

Health Checks

Component	Status
Commercial Model	Synced
Ticket Rate	Synced
Minimum Guarantee	Synced
Billable Unit	Synced
POS Entitlement	Synced
Access Entitlement	Synced
Modules	Synced
Billing Meter	Synced

Example Critical Issue

Contract:

AED 0.75 / Paid Ticket Sold

Meter Configuration:

All Tickets Issued

Status: CRITICAL MISMATCH

The system must prevent incorrect billing data from flowing to Board 10 until resolved.

Audit History

Track:

- Contract Version

- License Version
- Metering Rule Version
- Previous Value
- New Value
- Changed By
- Approved By
- Timestamp
- Effective Date

Actions

Re-Sync / Investigate / Compare Versions / Correct Configuration / View Audit

Critical Board 9 Data Separation

Softlabs should implement at least **three independent usage concepts**:

1. Raw Business Activity

What actually happened.

Example:

45,000 tickets issued.

2. Commercial Billable Consumption

What the contract says TICVAI may charge against.

Example:

40,500 billable tickets.

3. Technical License Consumption

What system resources the customer consumed.

Example:

23/25 POS

36/40 access devices

780K/1M API calls

They must **not be stored or interpreted as one generic “usage” value**.

Example — Why This Matters

Suppose during September:

- 50,000 tickets issued
- 45,000 paid
- 2,000 complimentary
- 2,000 refunded
- 1,000 cancelled
- 40,000 admissions
- 8,000 sales transactions

Contract says:

AED 0.75 per Paid Ticket Sold, excluding refunds.

The commercial meter might therefore determine:

43,000 billable tickets

This is completely different from:

50,000 issued tickets

40,000 admissions

8,000 transactions

Board 9 must preserve these distinctions.

Board 9 → Board 10 Handoff

At the end of every billing period, Board 9 should produce a **Commercial Consumption Statement**.

Example:

Customer: Dubai Discovery Museum

Subscription: SUB-000184

Period: September 2026

Commercial Model: Per Ticket + Minimum Guarantee

Billable Unit: Paid Ticket Sold

Raw Tickets: 45,000

Excluded Complimentary: 2,000

Excluded Refunds: 780

Excluded Cancelled/Reissued: 600

Final Billable Tickets: 41,620

Rate: AED 0.75

Variable Consumption Value: AED 31,215

Minimum Guarantee: AED 20,000

Reconciliation Status: APPROVED

Metering Rule: V3.2

Board 9 sends this to Board 10.

Board 10 then performs the financial calculation, invoicing, payment, renewal and commercial optimization.

Board 9 acceptance outcome

Board 9 is complete when TICVAI can answer four questions independently and accurately:

What did the customer actually use?

What usage is contractually billable?

Is the customer within their technical license?

What validated consumption should be sent to billing?

That is the boundary I would keep very clear for Softlabs.

Board 10 — Billing, Reconciliation, Renewal & AI Commercial Optimization

Scope of Work — 10 Screens

Board 10 is the **financial and commercial lifecycle layer** of the module.

Following the revisions to Boards 3, 4, 5 and 9, Board 10 must support billing and renewal across:

Tier-Based / Tier + Usage / Per-Ticket / Per-Transaction / Percentage-Based / Minimum Guarantee / Hybrid / Fixed / Custom

The most important boundary is:

Board 9 determines validated billable consumption. Board 10 applies the approved commercial contract to that consumption, calculates the financial charge, generates invoices, manages payment/renewal, and recommends future commercial optimization.

Board 10 must **not redefine what constitutes a billable ticket or transaction**. That definition comes from the approved contract and Board 9 metering.

Screen 1 — Billing & Commercial Command Center

Purpose

Provide finance, commercial and subscription teams with a consolidated view of the customer's financial position.

Customer Header

Dubai Discovery Museum

Screen 2 — Billing Calculation & Charge Breakdown

Purpose

Calculate exactly what TICVAI should charge for the billing period.

This screen must dynamically change according to the commercial model.

Standard Formula

For hybrid arrangements:

Invoice = Base Tier + Modules + Capacity + Billable Consumption + Overage + Services – Discounts – Credits + Tax

Per-Ticket Example

Billable Tickets:

41,620

Rate:

AED 0.75

Variable:

AED 31,215

Minimum Guarantee:

AED 20,000

Applicable Charge:

AED 31,215

Minimum Guarantee Example

If billable tickets were:

20,000

Variable:

AED 15,000

Minimum:

AED 20,000

Applicable Charge:

AED 20,000

Calculation Logic

Variable Charge = Billable Quantity × Contracted Rate

Commercial Charge = MAX(Variable Charge, Minimum Guarantee)

where the contract uses a minimum guarantee.

Line-Item Breakdown

Charge	Quantity	Rate	Amount
Billable Tickets	41,620	AED 0.75	AED 31,215
CRM	Included	—	AED 0
API Overage	200K	Contract Rate	AED X
Storage Overage	15GB	Contract Rate	AED X

Charge	Quantity	Rate	Amount
Professional Service	1	AED X	AED X

Then:

- Subtotal
- Discounts
- Credits
- Tax
- Final Invoice

Traceability

Every variable charge must link back to:

Board 9 Commercial Consumption Statement

Actions

Recalculate / View Source Consumption / Review Contract / Approve Calculation

Screen 3 — Consumption Reconciliation & Billing Approval

Purpose

This is an important new screen following the introduction of transaction-based contracts.

Finance must be able to reconcile the commercial consumption received from Board 9 before invoicing.

Consumption Statement

Period

Renewal Signals

Analyze:

- Ticket Growth
- Transaction Growth
- Technical Usage
- Overage
- Minimum Guarantee Utilization
- Module Adoption
- Payment History
- Support Activity
- Contract Exceptions
- Customer Growth/Decline

Example

Customer has exceeded minimum guarantee every month for the past 10 months.

AI:

Review ticket rate / hybrid commercial model at renewal.

Actions

Start Renewal / Simulate / Modify Offer / Create Proposal / Assign Owner

Screen 7 — AI Upgrade, Downgrade & Commercial Right-Sizing

Purpose

Use AI to recommend the **best future commercial structure**, not simply the most expensive package.

This remains a fundamental TICVAI AI principle.

Current Position

Example:

790K projected tickets/year
AED 0.75/ticket
AED 20K/month minimum
23/25 POS
36/40 Access

AI Recommendations

Option 1 — Maintain Contract

Continue AED 0.75/ticket.

Option 2 — Per Ticket + Higher Guarantee

AED 0.65/ticket + AED 25K/month minimum.

Option 3 — Hybrid

AED 5K/month + AED 0.45/ticket.

Option 4 — Fixed Enterprise

AED X/year.

AI may also recommend:

- Upgrade Tier
- Downgrade Tier
- Add Capacity
- Remove Unused Capacity
- Add Module
- Remove Unused Module
- Change Billing Cycle
- Add Minimum Guarantee
- Change Commercial Model
- Extend Contract

Every Recommendation Must Show

- Why
- Evidence
- Confidence
- Customer Financial Impact
- TICVAI Revenue Impact
- Operational Impact
- Contract Impact

Critical AI Rule

AI must be allowed to recommend “**No Change**” when the existing commercial structure remains appropriate.

Actions

Simulate / Accept Recommendation / Modify / Reject / Create Renewal Scenario

Screen 8 — Commercial Scenario Simulator

Purpose

Allow commercial and finance teams to model different renewal or contract scenarios before making an offer.

Editable Inputs

- Commercial Model
- Tier
- Ticket Rate
- Transaction Rate
- Percentage
- Minimum Guarantee
- Base Fee
- POS
- Access
- Users
- Modules
- API
- Storage
- Capacity Packs
- Contract Duration
- Billing Cycle
- Discount
- Expected Volume

Scenario Comparison

Current

AED 0.75/ticket + AED 20K minimum

Projected:

AED 592,500/year

Scenario A

AED 0.65/ticket + AED 25K minimum

Projected:

AED 513,500/year

Scenario B

Hybrid

AED 5K/month + AED 0.55/ticket

Projected:

AED 494,500/year

Scenario C

Fixed Enterprise

AED 500,000/year

Comparison Metrics

- Customer Cost
- TICVAI Revenue
- Minimum Revenue Protection
- Variable Revenue Exposure
- Margin
- Expected Overage
- Customer Saving/Increase
- Contract Predictability
- Revenue Growth/Contraction

AI Best Fit

Example:

Scenario C provides similar TICVAI revenue with greater predictability and simpler customer billing.

Actions

Save Scenario / Compare / Create Offer / Send for Approval

Screen 9 — Discount, Credit & Commercial Override Management

Purpose

Govern non-standard commercial terms.

Supported Overrides

- Tier Discount
- Module Discount
- Per-Ticket Rate Override
- Per-Transaction Rate Override
- Percentage Override
- Minimum Guarantee Override
- Free Module
- Free Capacity
- Special Overage Rate
- Fixed Price
- Credit
- Multi-Year Discount
- Promotional Period
- Custom Commercial Condition

Override Record

Example:

Standard Ticket Rate

AED 0.75

Approved Rate

AED 0.60

Minimum Guarantee

AED 25,000/month

Required Fields

- Override Type
- Standard Value
- Proposed Value
- Financial Impact
- Reason
- Start Date
- Expiry
- Contract
- Requested By
- Required Approval

Workflow**Requested**

- **Commercial Review**
- **Finance Review**
- **Authorized Approval**
- **Active**
- **Expired**

AI Warning

Proposed ticket-rate reduction decreases projected annual revenue by AED 74,000.

Actions

Request Override / Approve / Reject / Modify / Revoke

Screen 10 — Renewal Approval, Activation & Commercial Handoff

Purpose

Finalize renewal and synchronize the approved future commercial agreement across TICVAI.

Renewal Summary**Dubai Discovery Museum**

Current:

AED 0.75/ticket

Minimum AED 20K/month

Approved Renewal:

AED 0.65/ticket

Minimum AED 25K/month

Effective:

01 October 2027

Contract:

24 Months

Final Validation

- ✓ Commercial Model Approved
- ✓ Rate Approved
- ✓ Minimum Guarantee Approved
- ✓ Billable Definition Confirmed
- ✓ Technical Capacity Valid
- ✓ Modules Valid
- ✓ Finance Approved
- ✓ Customer Accepted
- ✓ Contract Complete

Approval Workflow

- **Commercial Review**
- **Finance Approval**
- **Authorized Approval**
- **Customer Acceptance**
- **Scheduled Activation**
- **ACTIVE**

Synchronization

Upon activation update:

- Subscription
- Commercial Contract
- Billing Rules
- Minimum Guarantee
- Billable Rate
- Module Entitlements
- Capacity
- License
- Board 9 Metering Rules
- Renewal Dates

Critical Control

The new commercial terms must become effective **only from their approved effective date**.

Previous periods remain governed by previous contract versions.

Final Status

RENEWAL ACTIVE

Actions

Approve Renewal / Schedule Activation / Activate / View Contract / View Audit

Revised Board 10 — Commercial Model Calculation

Board 10 must have a configurable calculation engine rather than separate hard-coded billing systems.

Commercial Model	Example Calculation
Tier	Base Tier + Modules + Overage

Commercial Model	Example Calculation
Tier + Usage	Tier + Modules + Usage
Per Ticket	Billable Tickets × Rate
Per Transaction	Billable Transactions × Rate
Percentage	Eligible Transaction Value × %
Minimum Guarantee	MAX(Variable Charge, Guarantee)
Hybrid	Base + Modules + Variable Charge
Fixed	Contracted Fixed Amount
Custom	Approved combination

For example, percentage-based contracts must also define whether the percentage applies to **gross value, net value, value before/after tax, refunds, fees, or other approved bases**. Board 9 supplies the validated eligible value; Board 10 applies the contractual percentage.

Critical Billing Audit Chain

For every variable invoice, TICVAI should be able to trace:

Invoice

- Billing Calculation
- Commercial Consumption Statement
- Billable Events
- Metering Rule
- Commercial Contract
- Approved Package

This is especially important if a customer disputes an invoice.

For example, TICVAI should be able to explain:

“Invoice INV-00982 contains 41,620 billable tickets because the customer's contract defines Paid Ticket Sold as the billable unit, excluding complimentary, refunded and cancelled tickets, under Commercial Rule V3.2.”

Board 10 — Minimum Guarantee Reconciliation

Minimum guarantees should support:

Monthly

Compare every month independently.

Quarterly

Compare cumulative quarter consumption against quarterly guarantee.

Annual

Compare cumulative annual consumption against annual guarantee.

Where commercially required, TICVAI should additionally support configurable:

- Carry-forward
- True-up
- Credit-forward

- Shortfall settlement
- Contract-year reconciliation

These rules must come from the commercial agreement rather than being assumed globally.

AI Commercial Optimization Principle

The AI engine should optimize across **both sides of the commercial relationship**.

It should consider:

Customer

- Cost
- Usage
- Growth
- Required capacity
- Unused resources
- Operational fit

TICVAI

- Revenue
- Margin
- Predictability
- Minimum revenue protection
- Growth opportunity
- Commercial risk

Therefore AI should not simply say:

“Customer usage increased → upgrade.”

It might instead determine:

“Keep the customer's Enterprise technical profile but move from tier pricing to AED 0.55/ticket with an AED 30K monthly minimum guarantee.”

Or:

“No commercial change is recommended.”

Board 10 Final Output

After billing:

Billing Period: September 2026

Commercial Consumption: APPROVED

Billable Tickets: 41,620

Rate: AED 0.75

Variable Charge: AED 31,215

Minimum Guarantee: AED 20,000

Applicable Charge: AED 31,215

Additional Charges: AED X

Discount/Credit: AED X

Tax: AED X

Invoice: GENERATED

Audit: COMPLETE

At renewal:

Customer: Dubai Discovery Museum

Current Commercial Model: Per Ticket + Minimum Guarantee

Approved Future Model: Per Ticket + Minimum Guarantee

New Rate: AED 0.65/ticket
New Minimum: AED 25,000/month
Contract: 24 Months
Effective: 01 October 2027
Customer Acceptance: COMPLETE
Subscription: UPDATED
License: SYNCHRONIZED
Board 9 Metering: SYNCHRONIZED
Renewal: ACTIVE

Board 10 acceptance outcome

Board 10 is complete when TICVAI can reliably answer:

What should this customer be charged?

Why is that the correct amount?

Has it been invoiced and paid?

What commercial structure should we propose next?

If the contract changes, have billing, subscription, licensing and metering all been synchronized correctly?

That closes the commercial lifecycle cleanly from **Board 2 assessment** → **Board 3 commercial rules** → **Board 4 package** → **Board 5 contract** → **Board 6 provisioning** → **Board 7 setup** → **Board 8 go-live** → **Board 9 consumption** → **Board 10 billing and renewal**.
