Screen 11.2.9 — Waiver Analytics, Compliance & Operational Insights

Screen 11.2.10 — AI Waiver Compliance & Risk Intelligence Center

Board 2 — Final Screen Register

Board 1 — Configure the Requirement

Board 2 — Execute & Prove Compliance

Area 11 — Waiver, Consent & Digital Form Management

This should cover the backend configuration for **customer waivers, liability releases, parental/guardian consent, declarations, acknowledgements, medical/activity forms, and other documents that must be completed or signed before a ticket, activity, event, or entitlement can be used.**

This is important because we already have the **waiver link requirement associated with Ticket Media**, but the actual **creation, rules, signing workflow, storage, validation and compliance management of waivers** deserves its own configuration area rather than being built inside Ticket Media.

I recommend 2 boards / 20 screens:

Board	Scope	Screens
Board 1	Waiver, Consent & Digital Form Configuration	10
Board 2	Waiver Operations, Compliance, Verification & AI	10

Board 1 — Configure

The screenshot displays the TICVAI Board 1 - Configure interface, which is organized into a grid of configuration screens. The top navigation bar includes the TICVAI logo, the board title "AREA 11 – WAIVER, CONSENT & DIGITAL FORM MANAGEMENT", and user information for Ahmed Al Mansoori, Platform Admin. The left sidebar lists the board's sections: 11.1.1 Command Center, 11.1.2 Waiver Template Library, 11.1.3 Digital Waiver & Form Builder, 11.1.4 Dynamic Fields, 11.1.5 Signatory & Guardian Rule Configuration, 11.1.6 Product, Event & Experience Association, 11.1.7 Waiver Trigger, Eligibility & Completion Rules, 11.1.8 Versioning, Effective Dates & Legal Change Control, 11.1.9 Localization, Branding & Experience Configuration, and 11.1.10 Approval, Testing & Publication Workspace. The main content area shows a preview of the "Youth Adventure Activity Waiver" form, which includes sections for Participant Information, Waiver Terms, Safety Acknowledgments, and Signatures. The form is currently in a draft state, and the user can preview or save it. The bottom of the screen shows a list of waivers, including "Adventure Activity Waiver", "Emergency Contact Form", "Medical Consent Form", "Photography & Media Consent", and "Equipment Rental Agreement".

The 10 screens would be:

Waiver Command Center → Waiver Template Library → Waiver/Form Builder → Dynamic Fields & Questions → Signature & Guardian Rules → Product/Event Association → Eligibility & Trigger Rules → Versioning & Effective Dates → Localization & Branding → Approval & Publication

This defines what needs to be signed, by whom, when, and for which product/event.

Board 2 — Operate & Control

The 10 screens would cover:

Waiver Operations Dashboard → Participant Waiver Status → Digital Signing & Collection → Group/Minor Consent Management → Verification → Missing/Expired Waivers → On-Site Exception Handling → Compliance & Audit Repository → Waiver Analytics → AI Compliance Intelligence

This manages what happens after the waiver has been assigned to the customer or participant.

Why I would keep this separate

Ticket Media should only understand something like:

Ticket #T-98271 → Waiver Required → Waiver Status: Signed ✓

It should not own the waiver itself.

The dedicated Waiver area owns:

Template → Questions → Legal Text → Signatory → Guardian → Version → Trigger → Signature → Evidence → Compliance

That architecture also lets the same waiver engine work across **Ticketing, Membership, Camps, Group Sales, Rentals, Activities, Events and B2C.**

So the next work item should be:

Area 11 → Board 1 — Waiver, Consent & Digital Form Configuration → 10-screen Scope of Work.

ok SOW of board 1

Area 11 — Waiver, Consent & Digital Form Management

Board 1 — Waiver, Consent & Digital Form Configuration

10 Backend Screens

Board Objective

Board 1 creates TICVAI's centralized **configuration engine for waivers, consent forms, declarations, acknowledgements and other digitally signed forms.**

The objective is to make waivers reusable across the entire platform rather than hard-coded into individual products.

The configuration flow should be:

Create Template → Build Form → Configure Questions → Define Signatory → Associate Products → Define Trigger Rules → Control Versions → Localize → Approve → Publish

The engine should support use cases including:

- Liability waivers
- Activity participation waivers
- Parent/guardian consent
- Minor consent forms
- Medical declarations
- Photography/media consent
- Terms acknowledgement
- Safety declarations
- Equipment/rental agreements
- Camp participation forms
- Membership declarations
- Event-specific declarations
- Data/privacy consent where applicable

Screen 11.1.1 — Waiver & Consent Command Center

Purpose

Provide administrators with a centralized workspace for managing every waiver, consent form and digital declaration configured across TICVAI.

Executive KPIs

Display:

- Total Templates
- Published
- Draft
- Pending Approval
- Scheduled
- Expiring
- Archived
- Products Requiring Waiver
- Active Waiver Versions
- Waivers Requiring Review

Template Directory

Each record should display:

- Waiver ID
- Waiver Name
- Type
- Version
- Language
- Associated Products
- Signatory Type
- Effective From
- Effective To
- Status
- Owner
- Last Modified

Waiver Types

Support configurable classifications:

- Liability Waiver
- Parent/Guardian Consent
- Participation Consent
- Medical Declaration

- Safety Acknowledgement
- Media Consent
- Rental Agreement
- Terms Acceptance
- Membership Declaration
- Custom Form

Status

Recommended:

Draft → Review → Pending Approval → Approved → Scheduled → Published → Suspended → Expired → Archived

Filters

Filter by:

- Type
- Brand
- Venue
- Product
- Event
- Language
- Status
- Owner
- Effective Date

Quick Actions

- Create Waiver
- Duplicate
- Create New Version
- Preview
- Test
- Submit for Approval
- Publish
- Suspend
- Archive

AI Capability

AI can identify forms requiring attention.

Example:

Review Recommended: 14 active products reference Waiver v2.1, which expires in 18 days. No replacement version has been published.

Acceptance Condition

Authorized administrators can locate, manage and understand the lifecycle and usage of every waiver or consent form from one central workspace.

Screen 11.1.2 — Waiver Template Library & Master Setup

Purpose

Create the master definition of a waiver or consent form before individual content and questions are configured.

Master Information

Configure:

- Waiver ID
- Waiver Name
- Internal Description
- Waiver Type
- Owner
- Department
- Brand
- Legal Entity
- Default Language
- Applicable Country/Jurisdiction
- Status

Template Sources

Allow:

- Create New
- Duplicate Existing
- Use Master Template
- Create From Approved Corporate Template

Reusable Templates

Examples:

Standard Activity Waiver

Minor Participation Consent

Photography Consent

Equipment Rental Agreement

Camp Medical Declaration

Ownership

Assign:

- Business Owner
- Legal Reviewer
- Compliance Owner
- Operational Owner

Usage Indicator**Show:**

Used by 24 products across 6 venues.

Template Dependency

Before editing, administrators should understand where the waiver is currently used.

AI Capability

AI can recommend existing templates when administrators attempt to create similar forms, reducing unnecessary duplication.

Acceptance Condition

Every waiver has a governed master record, owner, classification and intended business scope before publication.

Screen 11.1.3 — Digital Waiver & Form Builder

Purpose

Provide a no-code visual builder for creating the actual customer-facing waiver or digital form.

Builder Components**Support configurable blocks:**

- Heading
- Paragraph
- Legal Text
- Instructions
- Image/Logo
- Divider
- Information Box
- Checkbox
- Acknowledgement
- Question
- Signature
- Initials
- Date
- Customer Details
- Guardian Details

Drag-and-Drop Builder**Administrators should visually construct:****Header**

↓

Participant Information

↓

Waiver Terms

↓

Safety Acknowledgements

↓

Questions

↓

Consent

↓

Signature**Content Formatting****Support:**

- Headings
- Paragraphs
- Lists
- Bold/Emphasis
- Hyperlinks
- Mandatory notices
- Section numbering

Mandatory Reading/Acknowledgement**Specific sections may require:**☒ I have read and understood this section.**Conditional Sections****Example:****Participant age < 18**

→ Display Guardian Consent section.

Preview**Preview for:**

- Desktop
- Mobile
- Tablet

- B2C
- Kiosk/On-Site

AI Assistance

AI can help administrators structure form content or identify unclear wording, while legally controlled text remains subject to authorized review.

Acceptance Condition

Authorized administrators can build responsive digital waivers without software development while retaining complete control over mandatory content.

Screen 11.1.4 — Dynamic Fields, Questions & Conditional Logic

Purpose

Configure the information that must be collected from the participant or signatory.

Field Types

Support:

- Short Text
- Long Text
- Number
- Date
- Yes/No
- Checkbox
- Single Select
- Multi-Select
- Dropdown
- Email
- Mobile
- Address
- Customer Lookup
- Participant Lookup
- Signature
- Initials

Standard Fields

Reusable fields can include:

- Participant Name
- Date of Birth
- Customer ID
- Booking Reference

- Ticket Number
- Guardian Name
- Relationship
- Emergency Contact

Required Fields

Each field can be:

- Required
- Optional
- Conditional
- Read Only
- Auto-Populated

Conditional Logic

Example:

Do you have any accessibility requirements?

If **Yes**

→ Display additional information field.

Another example:

Participant Age < 18

- Require Guardian Name
- Require Guardian Relationship
- Require Guardian Signature

Validation

Configure:

- Required
- Minimum/Maximum
- Date range
- Format
- Character limit
- Allowed values

Data Mapping

Fields should map, where authorized, to existing TICVAI records rather than unnecessarily duplicating data.

Example:

Participant Name ← Ticket Holder

AI Capability

AI can identify potentially contradictory answers or incomplete forms for operational review.

Acceptance Condition

Administrators can create dynamic forms that collect only the information required for the specific participant, product and scenario.

Screen 11.1.5 — Signatory, Signature & Guardian Rule Configuration

Purpose

Define **who is legally or operationally required to complete and sign the waiver.**

Signatory Types

Support:

- Ticket Holder
- Purchaser
- Participant
- Parent
- Legal Guardian
- Group Leader
- Corporate Representative
- Member
- Rental Customer
- Other Authorized Signatory

Signature Requirements

Configure:

- Signature Required
- Initials Required
- Typed Acceptance
- Checkbox Acceptance
- Digital Signature
- Date/Time
- Signatory Name
- Relationship
- Identity Verification where required

Minor Rules

Example:

Participant < 18

→ Parent/Guardian Signature Required.

Rules should be configurable rather than globally hard-coded.

Multiple Signatories

Support scenarios requiring:

Participant + Guardian

or

Customer + Authorized Representative**Group Rules****For group bookings, configure whether:**

- Each participant signs individually
- Guardian signs for each minor
- Group leader signs where legally/operationally permitted
- One organization representative signs a permitted group declaration

Signature Evidence**Record requirements for:**

- Timestamp
- Waiver Version
- Signatory
- Authentication Method
- Relevant transaction/customer reference
- Consent evidence

Important Governance

TICVAI should not assume that a particular electronic-signature method is legally sufficient in every jurisdiction. Signature and evidence requirements must be configurable and subject to the organization's legal/compliance approval.

Acceptance Condition

TICVAI can determine exactly who must sign each waiver and what evidence must be retained before the waiver is considered complete.

Screen 11.1.6 — Product, Event & Experience Association**Purpose**

Determine **which TICVAI products or activities require each waiver.**

Association Targets**Allow association with:**

- Product
- Ticket Type
- Event
- Performance
- Attraction
- Activity

- Membership
- Camp
- Rental
- Resource
- Package
- Add-On
- Venue

Example

Adventure Climbing Ticket

Requires:

- Activity Liability Waiver
- Safety Acknowledgement

For minors:

- Parent/Guardian Consent

Association Scope

Support:

Global

Brand

Venue

Product

Event

Performance

Multiple Waivers

One product can require multiple forms.

Example:

Youth Football Camp

1. Participation Waiver
2. Guardian Consent
3. Media Consent
4. Medical Declaration

Mandatory vs Optional

Each association can be:

- Mandatory
- Optional
- Conditional
- Informational

Inheritance**Example:****Venue-level Safety Waiver**

↓

Automatically inherited by applicable activities.

Specific products may override or add additional requirements.

Dependency Impact**Before removing a waiver association, show affected:**

- Products
- Future bookings
- Tickets
- Participants
- Events

Acceptance Condition

Every applicable TICVAI product, event or activity can automatically determine which waiver or consent requirements apply.

Screen 11.1.7 — Waiver Trigger, Eligibility & Completion Rules**Purpose**

Define **when a waiver is required**, **when it must be completed** and **what happens if it is not completed**.

Trigger Points**A waiver may be triggered:**

- During Checkout
- After Purchase
- Before Ticket Issuance
- Before Ticket Download
- Before Event
- Before Check-In
- Before Access
- Before Equipment Collection
- Before Membership Activation
- Before Activity Start

Eligibility Rules**Waiver requirement may depend on:**

- Age

- Product
- Event
- Venue
- Activity
- Customer Type
- Membership
- Country
- Channel
- Participant Type
- Booking Type

Example**IF**

Product = Adventure Climbing

AND

Participant Age < 18

THEN**Require:**

1. Activity Waiver
2. Guardian Consent

Completion Deadline**Configure:**

- Immediately
- Before Ticket Release
- X hours before event
- X days before visit
- Before arrival
- Before access

Incomplete Waiver Behavior**Configure whether incomplete status:**

- Warns only
- Blocks Ticket Download
- Blocks Ticket Activation
- Blocks Check-In
- Blocks Access
- Requires Staff Override

Reminder Rules

Configure reminders such as:**T-7 days****T-3 days****T-24 hours****AI Capability**

AI can identify bookings at risk because mandatory waivers remain incomplete.

Acceptance Condition

Waiver requirements are automatically triggered and enforced according to configurable business rules and participant context.

Screen 11.1.8 — Versioning, Effective Dates & Legal Change Control**Purpose**

Ensure TICVAI maintains a complete historical record of exactly **which waiver wording each participant accepted**.

Version Control**Example:****Activity Waiver**

v1.0

↓

v1.1

↓

v2.0

Version Information**Capture:**

- Version Number
- Created By
- Created Date
- Change Reason
- Legal Reviewer
- Approval
- Effective From
- Effective To

Comparison**Allow side-by-side comparison:****Previous Version ↔ New Version****Highlight:**

- Added text

- Removed text
- Changed questions
- Changed signatory rules
- Changed associations

Effective Dating

Future versions can be scheduled.

Example:

v3.0 becomes effective 1 January 2027.

Existing Signatures

Critical rule:

Publishing a new waiver version must never overwrite the version previously signed by a customer.

The system must retain:

Customer → Waiver → Exact Version → Signature Evidence

Re-Sign Rules

Configure whether a new version requires existing customers/participants to sign again.

Emergency Suspension

Authorized users may suspend a waiver version if necessary, subject to governance.

Acceptance Condition

TICVAI preserves an immutable association between every completed waiver and the exact approved version accepted by the signatory.

Screen 11.1.9 — Localization, Branding & Customer Experience Configuration

Purpose

Configure how the waiver appears across different brands, languages and customer channels.

Localization

Support:

- Arabic
- English
- Additional languages as configured

Translation Management

Each version should show:

- Source Language
- Translation Status
- Translator/Reviewer
- Approval Status

- Last Updated

Important Rule

Legal translations should require controlled review before publication.

AI can assist with drafting translations, but should not automatically publish legally significant translated content.

Branding

Configure:

- Brand Logo
- Venue Logo
- Header
- Footer
- Typography
- Customer Instructions
- Support Contact
- Confirmation Message

Channel Experience

Preview for:

- B2C Web
- Mobile App
- Email Link
- QR Link
- Kiosk
- POS/Front Desk
- Group Portal

Accessibility

Forms should support the platform's accessibility requirements, including:

- Keyboard navigation
- Screen-reader compatible labels
- Appropriate contrast
- Clear validation messages
- Responsive layouts

Customer Journey

Example:

Open Link → Identify Participant → Read → Complete Questions → Sign → Confirmation

Acceptance Condition

Waivers can be delivered as localized, branded and accessible customer experiences without creating separate business logic for each channel.

Screen 11.1.10 — Waiver Approval, Testing & Publication Workspace

Purpose

Provide the final governance gate before a waiver becomes operational.

Pre-Publication Checklist

Validate:

Content

- Required legal text present

Fields

- Required fields configured

Logic

- Conditional rules valid

Signatory

- Signature rules configured

Associations

- Products/events assigned

Triggers

- Completion rules configured

Languages

- Required translations approved

Version

- Effective dates valid

Testing Sandbox

Administrators should simulate scenarios such as:

Adult participant

Minor participant

Group booking

B2C purchase

On-site purchase

Existing customer

Missing signature

Rule Simulation

Example:

Participant: 15 years old

Product: Youth Adventure

Channel: B2C

Expected:

- ✓ Activity Waiver
- ✓ Guardian Consent
- ✓ Guardian Signature
- ✗ Adult Declaration

Approval Workflow**Recommended:****Business Owner**

- **Operations Review**
- **Legal/Compliance Review where required**
- **Final Approval**
- **Publication**

Publication Options**Support:**

- Publish Now
- Schedule Publication
- Publish to Selected Venues
- Publish to Selected Products
- Controlled Rollout

Validation Errors

TICVAI should block publication for critical issues.

Example:

Cannot publish: Guardian signature is mandatory for minors, but no guardian signature field exists in the form.

AI Pre-Publication Review

AI can identify potential configuration inconsistencies.

Example:

This waiver blocks access when incomplete, but no reminder workflow is configured for post-purchase customers.

Audit**Record:**

- Submitted By
- Reviewed By
- Approved By
- Published By
- Dates
- Version

- Comments

Acceptance Condition

No governed waiver can enter production until its content, rules, associations, signatory requirements and customer journey have been successfully validated and approved.

Board 1 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
11.1.1	Waiver & Consent Command Center	Portfolio and lifecycle
11.1.2	Waiver Template Library & Master Setup	Master waiver configuration
11.1.3	Digital Waiver & Form Builder	No-code form creation
11.1.4	Dynamic Fields, Questions & Conditional Logic	Dynamic data collection
11.1.5	Signatory, Signature & Guardian Rule Configuration	Who must sign
11.1.6	Product, Event & Experience Association	Where waiver applies
11.1.7	Waiver Trigger, Eligibility & Completion Rules	When/how waiver is enforced
11.1.8	Versioning, Effective Dates & Legal Change Control	Legal/version governance
11.1.9	Localization, Branding & Customer Experience Configuration	Customer-facing experience
11.1.10	Waiver Approval, Testing & Publication Workspace	Validation and publication

Board 1 Configuration Flow

Template → Build → Questions → Signatory → Associate → Trigger → Version → Localize → Test → Approve & Publish

Critical TICVAI Architecture

I recommend putting this explicitly into the technical SOW:

The Waiver Engine must be a reusable platform service, not functionality embedded directly inside Ticketing or Ticket Media.

Other TICVAI modules should simply ask the Waiver service:

“What waivers apply to this participant and transaction?”

The service responds, for example:

Activity Waiver v3.2 — **Required / Signed** ✓

Guardian Consent v2.1 — **Required / Missing** ⚠

Media Consent v1.4 — **Optional / Declined**

Then **Ticketing, B2C, Access Control, Group Sales, Membership, Rental, Camps and POS** can react according to the configured rules.

This gives TICVAI **one central waiver and consent engine for the entire platform**, rather than multiple inconsistent waiver implementations.

Area 11 — Waiver, Consent & Digital Form Management

Board 2 — Waiver Operations, Compliance, Verification, & AI

10 Backend Screens

Board Objective

Board 1 configured **what the waiver is, who must sign it, when it applies, and how it is published.**

Board 2 manages what happens operationally **after a waiver requirement is assigned to a booking, ticket, participant, member, rental, group, or activity.**

The operational flow is:

Monitor → Collect → Track Participants → Manage Minors/Guardians → Verify → Resolve Missing/Expired Waivers → Handle On-Site Exceptions → Preserve Evidence → Analyze → AI Optimize

A critical design principle is:

One central waiver status should be recognized consistently by B2C, Ticketing, POS, Group Sales, Membership, Rental, Resource Management and Access Control.

Screen 11.2.1 — Waiver Operations Command Center

Purpose

Provide Operations, Customer Service, Compliance and venue teams with a real-time overview of waiver completion across upcoming and active activities.

Executive KPIs

Display:

- Waivers Required
- Completed
- Pending
- Partially Completed
- Expiring
- Invalid
- Rejected
- Guardian Consent Pending
- Upcoming Participants Missing Waiver
- Access Blocked
- Manual Exceptions
- Completion Rate

Operational Breakdown

Display by:

- Today
- Tomorrow
- This Week
- Venue
- Event
- Product
- Activity
- Group
- Booking
- Waiver Type

Upcoming Activity Table

Each record should show:

- Event/Activity
- Venue
- Date/Time
- Participants

- Waivers Required
- Completed
- Missing
- Completion %
- Guardian Pending
- Exceptions
- Operational Risk

Example:

Activity	Participant s	Comple te	Missin g	Status
Youth Adventure	180	174	6	Attentio n
Climbing Session	64	64	0	Ready
School Camp	420	386	34	Critical

Readiness Score**Example:****School Camp — Waiver Readiness 91.9%**

TICVAI should highlight whether missing forms could affect admission or operational readiness.

Filters**Filter by:**

- Brand
- Venue
- Event
- Product
- Waiver
- Date
- Status
- Participant Type
- Booking Channel

AI Capability

AI should prioritize operational risk.

Example:

Action Required: 34 participants for tomorrow's school camp are missing mandatory consent. Based on historical completion patterns, 11 are unlikely to complete before arrival without another reminder.

Acceptance Condition

Operations can identify every upcoming activity affected by incomplete waiver requirements and prioritize corrective actions before customer arrival.

Screen 11.2.2 — Participant Waiver Status & Tracking

Purpose

Provide a detailed operational record of the waiver requirements for each participant.

Participant Record

Display:

- Participant
- Participant ID
- Customer/Purchaser
- Booking
- Ticket
- Product
- Event
- Visit Date
- Age Category
- Group
- Waiver Requirements
- Completion Status

Waiver Status

Each required waiver can have:

Not Assigned

Assigned

Sent

Opened

In Progress

Completed

Verified

Rejected

Expired

Superseded

Exception Approved

Example

Participant: Omar Ahmed

Activity Waiver v3.2 — **Completed** ✓

Guardian Consent v2.1 — **Completed** ✓

Media Consent v1.4 — **Declined** — **Optional**

Medical Declaration v2.3 — **Pending** △

Overall:

Not Ready

Operational Actions

Authorized users can:

- Send Waiver
- Resend
- Open
- View
- Verify
- Request Correction
- Replace Signatory
- Record Exception
- View Audit History

Search

Search by:

- Participant
- Booking
- Ticket
- Email
- Mobile
- Group
- Waiver ID

Acceptance Condition

Staff can determine the complete waiver readiness of any participant from one screen.

Screen 11.2.3 — Digital Signing & Collection Operations

Purpose

Manage the actual distribution and completion of digital waivers.

Delivery Methods

Support:

- Email Link
- SMS Link
- WhatsApp where integrated
- B2C Account
- Mobile App
- Group Portal
- QR Code
- POS
- Kiosk
- Staff-Assisted Device

Signing Journey

Recommended:

Link Issued

- Participant Identified
- Waiver Loaded
- Questions Completed
- Acknowledgements Accepted
- Signature Captured
- Submission Validated
- Evidence Stored

Collection Dashboard

Display:

- Sent
- Delivered
- Opened
- Started
- Completed
- Failed
- Expired Links

Link Controls

Configure/reference:

- Link Expiry
- Single/Multi Use
- Authentication

- Participant
- Booking
- Waiver Version

Bulk Actions

For groups:

- Send All
- Resend Pending
- Send Reminder
- Generate QR
- Export Status

Completion Confirmation

After successful submission:

Waiver Completed

Activity Waiver v3.2

Participant: Omar Ahmed

Completed: 27 Aug 2026 — 08:42

Security

Signed links and records should prevent unauthorized access or inappropriate reuse.

Acceptance Condition

TICVAI can securely distribute, collect and track waiver completion across digital and assisted channels.

Screen 11.2.4 — Minor, Guardian & Group Consent Management

Purpose

Manage complex consent relationships for minors and organized groups.

This screen is particularly important for **camps, academies, schools, family attractions and youth activities**.

Guardian Relationship

Capture/reference:

- Minor
- Guardian
- Relationship
- Contact
- Verification Status
- Consent Status
- Signature Status

Multiple Children

A guardian should be able to manage multiple eligible minors efficiently.

Example:

Guardian: Sarah Ahmed

- Omar — Activity Waiver ✓
- Rima — Activity Waiver ✓
- Ali — Guardian Consent Pending

Consent Model

Support:

One Guardian → One Minor

One Guardian → Multiple Minors

Multiple Guardians → One Minor, where required

Organization Representative → Group, where permitted by configured rules

Group Dashboard

Example:

Green Valley School — 420 Participants

- Adult participants: 18
- Minors: 402
- Guardian consent complete: 378
- Pending: 24

Group Leader

Display:

- Organization
- Group Leader
- Contact
- Group Booking
- Responsibility
- Permitted Actions

Important Rule

A school/group leader should only sign on behalf of participants when the applicable configured waiver and legal/compliance policy explicitly permits it.

Bulk Communication

Allow:

- Send Guardian Links
- Resend Missing
- Notify Group Leader

- Export Missing List

AI Capability

AI can identify consent bottlenecks.

18 of the 24 incomplete consents belong to one class whose guardian invitations were sent to invalid email addresses.

Acceptance Condition

TICVAI can manage guardian and group consent relationships without incorrectly treating the purchaser, participant and legal signatory as the same person.

Screen 11.2.5 — Waiver Verification & Validation Workspace

Purpose

Provide authorized staff with a controlled process for reviewing waiver submissions that require verification.

Verification Queue

Display:

- Submission ID
- Participant
- Waiver
- Version
- Booking
- Signatory
- Submitted
- Verification Reason
- Risk
- Status

Verification Checks

Depending on configuration:

- Required Fields Complete
- Required Questions Answered
- Required Acknowledgements Accepted
- Signature Present
- Guardian Relationship Present
- Correct Waiver Version
- Participant Match
- Booking Match
- Effective Date Valid

- Required Evidence Present

Validation Result

Use:

Automatically Validated

Pending Manual Verification

Verified

Correction Required

Rejected

Reviewer Actions

- Verify
- Reject
- Request Correction
- Add Note
- Escalate
- View Evidence

AI Assistance

AI can flag anomalies such as:

Participant date of birth indicates age 15, but waiver was signed using the adult participant workflow.

Or:

Guardian surname differs from participant. This is not necessarily invalid but requires review under configured verification policy.

Human Governance

AI should flag discrepancies but should not independently make legal judgments regarding guardianship or validity unless explicitly supported by deterministic approved rules.

Acceptance Condition

Waivers requiring manual verification are reviewed consistently using governed validation criteria with complete reviewer accountability.

Screen 11.2.6 — Missing, Expired & Invalid Waiver Management

Purpose

Provide a dedicated exception workspace for waiver requirements preventing operational readiness.

Exception Categories

Include:

- Missing Waiver
- Incomplete

- Missing Signature
- Guardian Missing
- Expired
- Wrong Version
- Rejected
- Verification Failed
- Link Expired
- Participant Mismatch
- Required Correction

Exception Queue

Display:

- Participant
- Booking
- Event
- Visit Time
- Waiver
- Problem
- Time Remaining
- Access Impact
- Owner
- Status

Prioritization

Highest priority should consider:

- Event proximity
- Mandatory waiver
- Access blocking
- Minor/guardian issue
- Group size
- Operational impact

Corrective Actions

Authorized staff can:

- Resend
- Generate New Link
- Request Re-Sign
- Assign Correct Version
- Contact Customer

- Contact Guardian
- Request Verification
- Escalate
- Start Exception Workflow

Automated Reminder Escalation

Example:

T-7 days → Standard Reminder

T-3 days → Reminder

T-24 hours → Urgent Reminder

T-4 hours → Operations Alert

AI Capability

AI can predict non-completion risk.

27 participants remain incomplete. Based on delivery/opening history, approximately 19 are expected to complete before the deadline and 8 require proactive contact.

Acceptance Condition

Missing, invalid and expired waiver requirements are proactively identified and managed before they cause unnecessary admission or operational failures.

Screen 11.2.7 — On-Site Waiver & Exception Handling

Purpose

Support customers who arrive at the venue without completing required waivers.

Arrival Search

Staff can find the participant using:

- Ticket
- QR
- Booking
- Customer
- Participant
- Group
- Membership

On-Site Status

Example:

Ticket Valid ✓

Payment Complete ✓

Activity Waiver Missing ✕

Guardian Consent Missing ✕

Access Status: BLOCKED**Resolution Options****Depending on configuration:**

- Send Mobile Link
- Display QR for Customer
- Complete on Kiosk
- Complete on Staff Tablet
- Contact Guardian
- Re-Sign Updated Waiver
- Request Supervisor Exception

Staff-Assisted Mode

Staff can assist navigation, but the system must preserve who actually provided consent/signature.

Exception Workflow**Where allowed:****Request Exception**

- Reason
- Supporting Evidence
- Supervisor
- Approve/Reject
- Effective Scope

Override Scope**If permitted, an exception can be:**

- One-Time
- Ticket-Specific
- Activity-Specific
- Time-Limited

Critical Rule

Staff should never be able to simply mark a mandatory waiver as “signed” when no valid signature/evidence exists.

Access Control Integration**Once successfully completed:****Waiver Status → Verified**

↓

Access Eligibility Recalculated

↓

Access Control receives updated eligibility.

Acceptance Condition

On-site staff can efficiently resolve legitimate waiver issues while preventing unauthorized bypass of mandatory consent requirements.

Screen 11.2.8 — Compliance Evidence, Audit & Waiver Repository

Purpose

Maintain the complete evidentiary record of every waiver and consent transaction.

Repository Search

Search by:

- Participant
- Customer
- Ticket
- Booking
- Event
- Waiver
- Version
- Signatory
- Date
- Venue

Evidence Record

Store/reference:

- Waiver ID
- Exact Version
- Participant
- Signatory
- Signatory Type
- Submission Date/Time
- Responses
- Acknowledgements
- Signature Evidence
- Verification
- Related Booking
- Related Ticket
- Applicable Product/Event
- Audit Events

Audit Timeline

Example:

08:31 — Link issued

08:35 — Link opened

08:39 — Guardian information completed

08:42 — Signature submitted

08:42 — System validation passed

08:43 — Waiver marked complete

Immutable Historical Record**A completed record must retain the exact:**

- Legal wording
- Questions
- Responses
- Waiver version
- Signatory evidence

even if the active template later changes.

Access Control**Repository access should be governed by:**

- Role
- Business Unit
- Venue
- Legal Entity
- Data sensitivity

Retention

Retention and deletion policies should be configurable according to applicable organizational/legal requirements.

Export

Authorized users may generate an evidence package for a specific waiver/participant.

Acceptance Condition

TICVAI can reconstruct what was presented, answered, acknowledged and signed for any completed waiver at the relevant point in time.

Screen 11.2.9 — Waiver Analytics, Compliance & Operational Insights

Purpose

Analyze waiver completion, customer behavior and operational effectiveness.

Executive KPIs**Analyze:**

- Waivers Assigned
- Completion Rate
- Pre-Arrival Completion
- On-Site Completion
- Average Completion Time
- Guardian Completion Rate
- Rejection Rate
- Exception Rate
- Access Blocks
- Reminder Effectiveness

Funnel

Visualize:

Assigned → Sent → Delivered → Opened → Started → Signed → Verified

Example:

10,000 Assigned

↓

9,740 Delivered

↓

8,920 Opened

↓

8,710 Started

↓

8,430 Completed

↓

8,390 Verified

Analysis Dimensions

Filter by:

- Waiver
- Version
- Product
- Event
- Venue
- Customer Type
- Participant Type
- Channel
- Language
- Group

Abandonment Analysis

Identify where users leave the process.

Example:

18% abandonment occurs at the medical-information section.

Reminder Analysis

Measure which reminder timing generates the highest completion.

Operational Impact**Analyze:**

- Check-in delays
- Access blocks
- Staff interventions
- On-site completions
- Exceptions

AI Insight**Example:**

Participants receiving their first waiver request at least five days before the activity have a 96% pre-arrival completion rate compared with 71% when sent within 24 hours.

Acceptance Condition

Management can understand waiver compliance and identify configuration or process improvements that reduce customer friction and on-site workload.

Screen 11.2.10 — AI Waiver Compliance & Risk Intelligence Center

Purpose

Provide an AI intelligence layer across the complete waiver lifecycle.

This should combine **Board 1 configuration data + Board 2 operational data**.

AI Inputs**Analyze authorized information from:**

- Templates
- Versions
- Questions
- Signatory Rules
- Product Associations
- Trigger Rules
- Participants
- Completion
- Verification
- Exceptions
- Access Blocks

- Customer Interactions
- Operational Trends

AI Management Questions

Authorized users can ask:

"Which events have the most missing waivers tomorrow?"

"Why are customers abandoning the guardian consent form?"

"Which waiver version generates the most corrections?"

"Which groups are at risk of arriving incomplete?"

"Which venues have the highest on-site waiver completion?"

AI Risk Detection

Operational Risk

School Camp tomorrow has 34 incomplete guardian consents.

Configuration Risk

Three products require guardian consent but do not currently block check-in when consent is missing.

Version Risk

Waiver v2.1 remains associated with two future products even though v3.0 becomes mandatory next week.

Customer Experience Risk

Mobile users are abandoning Section 4 at 2.6× the desktop rate.

AI Recommendations

Examples:

Send targeted guardian reminders now.

Move the medical declaration earlier in the customer journey.

Review the mobile layout of Section 4.

Schedule v3.0 association update before the effective date.

Add a post-purchase waiver reminder for this product.

Predictive Readiness

AI can estimate:

Tomorrow's Waiver Readiness Forecast — 97.4%

Potential unresolved participants: **21**

High-risk participants: **8**

Natural-Language Operational Query

A venue manager could ask:

"Show me everyone arriving tomorrow morning who cannot currently be admitted because of a waiver issue."

TICVAI should return the affected bookings/participants and the specific reason.

AI Governance

AI can:

- Detect
- Explain
- Prioritize
- Recommend
- Draft reminders
- Create review tasks where authorized

AI should not independently:

- Fabricate consent
- Generate a signature
- Mark an unsigned waiver as complete
- Override guardian requirements
- Change legal wording
- Approve legal exceptions

Acceptance Condition

TICVAI provides explainable AI assistance for waiver readiness, compliance and operational risk while preserving human/legal governance over consent and exceptions.

Board 2 — Final Screen Register

Screen	Backend Screen	Primary Responsibility
11.2.1	Waiver Operations Command Center	Overall waiver readiness
11.2.2	Participant Waiver Status & Tracking	Participant-level requirements
11.2.3	Digital Signing & Collection Operations	Waiver delivery and signing
11.2.4	Minor, Guardian & Group Consent Management	Guardian/group relationships
11.2.5	Waiver Verification & Validation Workspace	Submission verification
11.2.6	Missing, Expired & Invalid Waiver Management	Exception resolution
11.2.7	On-Site Waiver & Exception Handling	Venue/frontline resolution
11.2.8	Compliance Evidence, Audit & Waiver Repository	Evidence and audit

Screen	Backend Screen	Primary Responsibility
11.2.9	Waiver Analytics, Compliance & Operational Insights	Compliance analytics
11.2.10	AI Waiver Compliance & Risk Intelligence Center	AI compliance intelligence

Area 11 — Complete Structure

With Board 2, **Area 11 contains 2 boards / 20 backend screens.**

Board 1 — Configure the Requirement

Template → Build → Questions → Signatory → Associate → Trigger → Version → Localize → Test → Publish

Board 2 — Execute & Prove Compliance

Monitor → Track → Collect → Guardian → Verify → Resolve → On-Site → Audit → Analyze → AI
Critical cross-module behavior

I recommend one important status model be standardized across TICVAI:

Waiver Requirement Status = Not Required / Required-Pending / In Progress / Completed / Verified / Invalid / Expired / Exception Approved

Other modules should **consume this status**, not independently calculate it.

For example:

B2C: "Complete your waiver."

My Tickets: "1 requirement pending."

Group Sales: "34 participants incomplete."

POS: "Waiver required before ticket activation."

Access Control: "Entry blocked — mandatory consent missing."

Customer Service: "Resend waiver."

Employee App: "8 arrivals require waiver assistance."

This is what will make the waiver capability feel like a true **platform-wide TICVAI service**, rather than another isolated module.
