Detailed RFP for TAIS Platform

Functional Requirements by Domain

The proposed **TIAS platform** must provide a modular architecture organized into the following functional domains. Each domain represents a major capability required to operate large-scale entertainment venues such as theme parks, water parks, arenas, museums, resorts, and multi-venue destinations.

Vendors must clearly describe how their proposed solution addresses each capability and indicate whether functionality is provided **out-of-the-box, configurable, or requires customization**.

1. Identity & Security Domain

This domain manages authentication, identity management, security policies, and system access control across the platform.

Authentication & Authorization

Provides secure login and authentication mechanisms for guests, staff, partners, and system devices. The system must support secure credential validation, token-based authentication, and identity federation.

Single Sign-On (SSO) & Multi-Factor Authentication (MFA)

Allows users to access multiple components of the platform using a single identity while enhancing security through additional verification methods such as OTP codes, authentication apps, or biometric verification.

Role-Based Access Control (RBAC)

Defines user roles and permissions across the system to ensure users only access functions appropriate to their role (e.g., cashier, supervisor, administrator).

Accreditation System

The system shall provide an accreditation module to manage and issue access credentials for authorized personnel, partners, media representatives, and special guests. The module must support registration, approval workflows, credential generation, and access control management to ensure secure and organized entry to designated areas.

Policy-Based Access Control

Allows dynamic access control rules based on contextual conditions such as location, operational status, or time-based restrictions.

Identity Context Management

Identifies the acting entity in each system interaction (guest, staff member, device, or system service) to ensure accurate traceability of actions.

Approval Workflows

Supports approval processes for sensitive operations such as large refunds, pricing overrides, and operational changes requiring management authorization.

Audit Trail & Logging

Maintains immutable logs of all critical system activities including financial transactions, configuration changes, and administrative actions.

Security Monitoring

Continuously monitors system activity to detect unauthorized access attempts and suspicious behavior.

2. Governance & Multi-Tenant Domain

This domain manages the organizational structure of the platform and supports multi-organization deployments.

Multi-Tenant Architecture

Enables multiple independent organizations or venue operators to operate within the same platform while maintaining strict data isolation.

Tenant Management

Defines the top-level organizational entity within the system and manages global configuration settings.

Branch / Regional Management

Allows organizations to group venues under regional or operational divisions for governance and reporting.

Venue Management

Represents physical venues such as parks, arenas, museums, or entertainment facilities. Each venue may define operational rules, opening hours, and ticketing configurations.

Department Management

Allows venues to create internal operational units such as ticketing offices, retail stores, restaurants, attractions, or operations departments.

Regional Configuration

Supports regional configuration including currency, taxation rules, language, and regulatory compliance requirements.

3. Finance Domain

This domain manages all financial operations, payment processing, and revenue tracking within the platform.

Payment Gateway Management

Handles payment processing through multiple providers including credit cards, digital wallets, and mobile payment services.

Payment Device Management

Supports secure integration with payment terminals and card readers used at POS locations for in-person transactions.

Transaction Ledger

Maintains a complete financial ledger recording all financial transactions within the system for accounting and auditing purposes.

Refund Management

Supports full and partial refunds while maintaining accurate financial records and approval workflows.

Chargeback Management

Manages payment disputes initiated by banks or customers and tracks dispute resolution.

Chart of Accounts Management & Revenue Recognition

The system must support management of the chart of accounts, revenue recognition rules, and cost allocation structures.

Settlement Reconciliation

Ensures recorded transactions match financial settlements received from payment gateways and financial institutions.

Invoice Management

Generates formal tax invoices for corporate clients, partners, and group bookings.

Credit Memo Management

Allows financial adjustments to previously issued invoices without issuing direct refunds.

Gift Card Management

Supports creation, activation, balance tracking, and redemption of physical or digital gift cards.

Subscription & Membership Billing

Manages recurring billing for memberships, annual passes, or subscription-based services.

Tax Calculation Engine

Automatically calculates applicable taxes based on venue location and regulatory requirements.

Fee Management

Allows venues to apply service fees, booking fees, or convenience fees during transactions.

Receipt Generation

Provides digital or printed receipts for customer purchases.

Stored Value Wallet

Allows guests to preload funds into a digital wallet used for purchases throughout the venue.

Custom Reports

An embedded report builder must allow the creation of custom reports and dashboards accessible to authorized users.

4. Ticketing & Entitlement Domain

This domain represents the core ticketing engine responsible for ticket identity and access rights.

Ticket Identity Management

Generates unique digital ticket identities capable of storing multiple entitlements associated with a purchase.

Product Catalog

Defines ticket types and products such as general admission, VIP access, bundled packages, or special experiences.

Entitlement Management

Defines and enforces what services or attractions a ticket holder is allowed to access.

Ticket Media Management

Supports multiple ticket carriers including QR codes, RFID wristbands, NFC cards, and mobile wallet passes.

Data Collection Management

Ability to create customizable forms to collect information related to customers, events, products, discounts, and transactions across all sales channels.

The system must also support marketing surveys used at POS to collect demographic data and operational insights.

Seatmap Management

Allows venues to create and manage interactive seat maps for reserved seating events.

Access Control Integration

Validates tickets at entry points and verifies guest entitlements before allowing access.

The platform must support integration with major turnstile and access control providers such as Axess, Skidata, CAME, KABA, Boon Edam, and other industry-standard systems.

Mobile Access Control Application

The platform must provide a mobile access control application for Android devices to enable ticket validation and entry management.

5. Events & Experience Domain

This domain manages scheduled experiences and attractions within the venue.

Event Scheduling

Allows venues to create and manage scheduled activities such as shows, tours, performances, or special experiences.

Session Management

Supports events with multiple sessions and time slots.

Capacity Management

Tracks the maximum number of participants allowed for events or attractions.

Virtual Queue System

Allows guests to join digital queues for attractions instead of waiting in physical lines.

Queue Prediction

Uses historical and real-time data to estimate attraction wait times.

Resource Allocation

Assigns staff, equipment, or spaces required to operate events and experiences.

6. Sales & Commerce Domain

This domain manages customer purchasing across all channels.

Order Management

Tracks the lifecycle of customer purchases from order creation through fulfillment.

Shopping Cart

Allows customers to select products before completing purchases.

Bundle & Package Management

Supports creation of bundled offerings such as family packages or multi-attraction passes.

Wishlist

Allows guests to save products or experiences for future purchase.

Sales Channel Management

Controls product availability and pricing across channels such as web, mobile apps, POS, or partner platforms.

Online Storefront

Provides a digital storefront where customers can browse products and purchase tickets.

Partner & Reseller Portal

Allows external partners such as travel agencies or hotels to sell tickets through dedicated portals.

Ticket Resale Marketplace

Supports controlled peer-to-peer resale of tickets between guests.

Promotions & Discounts

Allows marketing campaigns and discount codes to be applied to purchases.

The system must support dynamic pricing, promotional rules, coupons, and upselling strategies.

Retail Sales Integration

Supports sale of merchandise within the platform.

Food & Beverage Sales Integration

Allows restaurants and food outlets to process transactions within the system.

Membership & Loyalty Sales

Supports the sale and management of membership and loyalty programs.

7. POS & Frontline Operations Domain

This domain supports on-site operational sales and staff interfaces.

POS Terminal Management

Manages physical sales terminals located throughout the venue.

Cash Management

Tracks cash drawer activity and ensures accurate cash reconciliation.

Staff Shift Management

Tracks staff working sessions and associates transactions with specific shifts.

POS Interface

Provides the staff-facing interface used to process ticket sales, retail purchases, and service transactions.

Offline Operation

Allows POS systems to continue functioning during network outages with automatic synchronization once connectivity is restored.

Kiosk Sales

Supports unattended kiosk operations for ticket sales, wristband printing, and retail or F&B purchases.

Flying POS

Allows staff to sell tickets and process transactions using mobile POS devices.

Hardware Integration

Supports integration with ticket printers, receipt printers, barcode scanners, RFID devices, and payment terminals.

8. Marketing & Customer Engagement Domain

Customer Relationship Management

Maintains guest profiles and behavioral data.

Guest Segmentation

Allows marketing teams to group customers based on demographics and purchasing behavior.

Campaign Management

Supports creation and tracking of marketing campaigns.

Marketing Automation

Automates marketing communications such as reminders and promotional messages.

Newsletter Management

Supports subscription-based communication with guests.

Analytics Integration

Integration with analytics tools such as Google Analytics and Meta Pixel through Google Tag Manager.

Behavioral Tracking

Provides heatmaps, click tracking, scroll tracking, and session replay analysis.

Reviews & Ratings

Allows guests to provide feedback about experiences.

Gamification

Supports loyalty points, achievements, and reward mechanisms.

Surveys & Feedback

Collects visitor feedback and calculates satisfaction metrics such as Net Promoter Score.

Chat Support

Provides real-time communication between guests and support teams.

Notification System

Sends automated communications via SMS, email, or push notifications.

Content Management System (CMS)

White-Label Website Management

The CMS must support creation and management of white-label websites for **B2C and B2B digital channels**, including multi-brand, multi-site, multilingual, and multi-currency capabilities.

SEO Management

Supports optimization of website content for search engines.

Digital Waivers

Allows guests to digitally sign liability waivers for specific attractions or activities.

9. Intelligence & AI Domain

Includes:

- AI Engine
- AI Configuration Assistant
- Dynamic Pricing Engine
- Demand Forecasting
- Recommendation Engine
- Pricing Optimization
- Search & Discovery
- Reporting Engine
- Business Intelligence Dashboards
- System Telemetry
- Digital Asset Management
- Customer Support Automation
- Fraud Detection

10. Operations & Logistics Domain

Includes:

- Warehouse & Inventory Management
- Procurement Management
- Recipe Management
- Kitchen Display System Integration
- Device Management
- Maintenance & Safety
- Staff Rostering
- Support Ticketing
- Hotel Integration
- Parking Management
- Locker & Rental Management
- Operations Command Center

11. Ecosystem & Platform Infrastructure Domain

Includes:

- API Gateway
- Integration Framework
- Developer Portal
- Sandbox Environment
- Background Processing

- Data Migration
- URL Management
- GDPR Compliance
- PCI-DSS Compliance
- DESC Compliance
- Security Infrastructure
- Backup & Disaster Recovery
- Deployment Management

Mobile Applications (Guest & Staff)

The platform must provide two configurable mobile applications.

Guest Application

Supports ticket purchase, digital tickets, notifications, and venue information.

Staff Operations Application

Supports ticket validation, operational workflows, and guest assistance.

Both applications must support:

- White-label branding
- CMS-controlled configuration
- Real-time API integrations
- Digital ticket wallets
- Push notifications
- Offline ticket validation
- Secure authentication
- High scalability

12. Non-Functional Requirements

Scalability

The system must support high transaction volumes and concurrent users during peak events.

Availability

Minimum platform uptime of **99.9%**.

Performance

Ticket validation and POS transactions must process with minimal latency.

Security

The platform must implement strong encryption and authentication.

Data Protection

All personal and financial data must comply with applicable data protection regulations.

System Monitoring

The system must include monitoring tools for system health and operational alerts.

Vendor Proposal Requirements

Vendors responding to this RFP must provide:

- Detailed system architecture
- Implementation methodology
- Deployment model supporting Cloud, On-Premise, and Hybrid environments
- Integration approach
- Estimated project timeline
- Detailed cost breakdown
- Support and maintenance structure

Intellectual Property & Source Code Ownership

The TIAS platform will be fully owned by the client, including source code, architecture, documentation, and intellectual property.

The selected vendor will act as a **technology development partner** responsible for building the platform according to the specifications defined in this RFP.

The vendor must provide full access to the source code repository and ensure the platform can be independently maintained and extended by the client or third-party developers.

13. RFP Timeline

The Request for Proposal (RFP) process will follow the timeline outlined below.

RFP Release	10 March 2026	Official release of the RFP to invited vendors
Vendor Question Period	10 March – 15 March 2026	Vendors may submit clarification questions regarding the RFP
Final Date for Questions	15 March 2026	Last day vendors can submit questions
Responses to Questions	16 March 2026	Consolidated responses will be shared with all participating vendors
Proposal Submission Deadline	20 March 2026	Vendors must submit their final proposals

Proposal Evaluation	21 – 25 March 2026	Internal evaluation of vendor proposals
---------------------	---------------------------	---

Vendor Shortlisting (if required)	TBD	Shortlisted vendors may be invited for presentations or clarifications
-----------------------------------	------------	--

Final Vendor Selection	TBD	Final vendor selection and contract negotiations
------------------------	------------	--

Vendor Questions

All questions related to this RFP must be submitted in writing before **16 March 2026**.

Responses will be shared with all participating vendors to ensure fairness and transparency.

The client reserves the right to modify the timeline if necessary and will notify all vendors of any changes.

14. Proposal Evaluation Criteria

Vendor proposals will be evaluated based on the following weighted criteria.

Technical Architecture & Platform Design	20%
Functional Coverage of RFP Requirements	15%
Vendor Experience & References	5%
AI Capabilities & Innovation	15%
Integration & Scalability Capabilities	5%

Implementation Approach & Project Plan 10%

Total Cost of Ownership 30%

Evaluation Criteria Explanation

Technical Architecture & Platform Design — 20%

Evaluation of the proposed system architecture including scalability, modular design, API architecture, security framework, and long-term maintainability of the platform.

Functional Coverage — 15%

Assessment of how well the vendor's proposed solution satisfies the functional requirements defined in this RFP.

Vendor Experience & References — 5%

Evaluation of the vendor's previous experience delivering similar platforms. Vendors must provide references from comparable implementations.

AI Capabilities & Innovation — 15%

Assessment of the vendor's ability to implement AI-driven capabilities including demand forecasting, dynamic pricing, fraud detection, recommendation engines, and AI-assisted system configuration.

Integration & Scalability — 5%

Evaluation of the vendor's ability to integrate with external systems such as payment gateways, ERP systems, hotel systems, access control systems, and other third-party platforms.

Implementation Approach & Project Plan — 10%

Evaluation of the vendor's proposed implementation methodology, project governance structure, and delivery timeline.

Total Cost of Ownership — 30%

Evaluation of the overall cost of the solution including development, implementation, integrations, deployment, and long-term maintenance.

15. Vendor References Requirement

Vendors must provide at least three (3) references from organizations where similar platforms have been successfully implemented.

Each reference should include:

- Organization name
- Project description
- Scope and scale of the implementation
- Contact person and role
- Contact email and phone number

The client reserves the right to contact references during the evaluation process.
