Board 1 — Event Master Configuration & Event Catalogue

Matrix Coverage: 1.3.1, 1.3.2, 1.3.14, 1.3.17, 1.3.18, 1.3.19, with association points to related Event Management requirements.

Board Objective:

Provide administrators with the central backend workspace for creating, classifying, configuring, templating, duplicating and governing events before detailed schedules, spaces, seating, ticketing, resources and operational rules are attached.

BOARD 1: EVENT MASTER CONFIGURATION & EVENT CATALOGUE

Objective: Provide administrators with the central backend workspace for creating, classifying, configuring, templating, duplicating and governing events before schedules, spaces, seating, ticketing, resources and operational rules are attached.

10 SCREENS **COVERS** 1.3.1, 1.3.2, 1.3.14, 1.3.17, 1.3.18, 1.3.19

01 Event Catalogue Command Center

Event Catalogue

Event ID * Event Name * Type * Venue * Start Date * Status * Config %

Event ID	Event Name	Type	Venue	Start Date	Status	Config %
EVT-10001	The Great Concert	Performance	Main Auditorium	24 May 2025	Published	100%
EVT-10002	Art Workshop - Basics	Workshop	Studio A	02 Jun 2025	Draft	45%

- View and manage all events across venues.
- Filter by status, type, venue, date and more.
- Quick actions: create, edit, duplicate, archive.

02 Create Event Wizard

Basic Info Event Type Configuration Review Complete

Creation Method

Create new event from scratch | Use an existing event template | Copy an existing event | Create with AI assistance

Internal Event Name *
Summer Art Workshop

Organizer *
Art & Culture Department

- Choose creation method and enter basic details.
- Configure type, ownership and initial settings.
- Save as Draft to continue later.

03 Event Identity & Metadata

Event Identity

Event ID: EVT-10002
Internal Event Name: Summer Art Workshop
Public Event Name: Summer Art Workshop - Basics
Short Name: Art Workshop Basics
Event Type: Workshop
Sub Category: Arts & Crafts
Organizer: Art & Culture Department
Venue (Internal): Studio A
Primary Language: English
Tag: Workshop | Art | Beginner

Description
An introductory painting workshop for beginners.

- Maintain core identity and classification.
- Add descriptions, tags, metadata and internal notes.
- Configure mandatory and optional attributes.

04 Event Date, Time & Duration Configuration

Event Timing (Master Level)

Start Date: 15/06/2025 Start Time: 10:00 AM
End Date: 15/06/2025 End Time: 02:00 PM
Duration: 04:00 Time Zone: GMT+08:00 Kuala Lumpur
Doors Open At: 09:30 AM

Display Settings

Display Start Time: ☒
Display End Time: ☒
Display Duration: ☒

- Define master event timing and duration.
- Set timezone and doors open reference.
- Choose what time details to display publicly.

05 Event Type & Behaviour Configuration

Event Behaviour

Event Type: Workshop
Event Feature: ☐ Free ☒ Paid ☐ Mixed
Delivery Mode: ☒ Physical ☐ Virtual ☐ Hybrid

Enable / Disable Features

Registration: ☒ Waitlist: ☒
Ticketing: ☒ Over-sales: ☐
Capacity Control: ☒ Accreditation: ☐
Seating: ☐ Sponsorship: ☐
Multiple Sessions: ☐ Documents: ☐
Resources Required: ☒ Walkers: ☒
Check-in Required: ☐

- Determine how the event will operate on the platform.
- Enable only the relevant features for this event.
- Apply behaviour profile if available.

06 Event Configuration Features

Configure Applicable Features

Start Date/Time: ☒ Over-sales: ☒
End Date/Time: ☒ Resources: ☒

Communications	Warning
Finance	Warning
Operational	Complete

Information

Review configuration completeness and issues.
Validate before approval or publication.
View audit history and version details.

Screen 01 — Event Catalogue Command Center

- Purpose:**
Provide the main administrative view of all events configured across the platform.

Backend Configuration:

- Display all events in a configurable data grid.
- Show Event ID, event name, event type, organizer, venue, start date, end date and lifecycle status.
- Display classifications such as Performance, Workshop, Activity, Guided Tour or other administrator-defined event types.
- Show physical, virtual or hybrid event indicators.
- Show Draft, Pending Approval, Approved, Published, On Sale, Sold Out, Completed, Cancelled and Archived statuses.
- Filter by tenant, business unit, venue, organizer, event type, lifecycle status and date.
- Search by Event ID, internal name or public event name.
- Allow authorized users to create, edit, duplicate, archive or open an event.
- Highlight events requiring configuration or approval.
- Show configuration completeness percentage and validation warnings.
- Acceptance Condition:**
Authorized administrators can locate and manage events across their permitted organizational scope, with all actions permission-controlled and audit logged.

Screen 02 — Create Event Wizard

- Purpose:**
Guide administrators through creation of a new event master record.

Backend Configuration:

- Select creation method:
- Create from scratch
- Create from template

- Duplicate existing event
- AI-assisted creation
- Enter internal event name.
- Enter public/display event name.
- Select event type.
- Select event category and subcategory.
- Select organizer or event owner.
- Assign tenant/business entity.
- Select initial event delivery mode: Physical, Virtual or Hybrid.
- Define whether the event is Free, Paid or Mixed.
- Define initial lifecycle state.
- Save as Draft without requiring full configuration.
- **Acceptance Condition:**
The administrator can create a valid event master record using the selected creation method without prematurely configuring schedules, seating or other downstream functionality.

Screen 03 — Event Identity & Metadata

- **Purpose:**
Configure the core identity and classification information attached to an event.

Backend Configuration:

- Event ID / system-generated reference.
- Internal event name.
- Public event name.
- Short name.
- Event type.
- Event category and subcategory.
- Organizer.
- Promoter/producer where applicable.
- Venue association.
- Primary language.
- Tags and internal labels.
- Event description.
- Internal administrative notes.
- Custom metadata fields.
- Configure mandatory/optional metadata.
- Allow selected attributes to be activated or deactivated according to event requirements.
- **Acceptance Condition:**
Administrators can maintain structured event metadata and the platform validates mandatory fields before the event progresses to publication.

Screen 04 — Event Date, Time & Duration Configuration

- **Purpose:**
Define the high-level temporal parameters of the event master.

Backend Configuration:

- Event start date.
- Event start time.
- Event end date.
- Event end time.
- Event duration.
- Time zone.
- Doors-open reference where required.
- Default booking start/end parameters.
- Determine whether start time is displayed publicly.
- Determine whether end time is displayed publicly.
- Enable or disable duration.
- Configure date/time attributes as required or optional.
- Define whether individual occurrences can override master settings.

Important:

*This screen establishes the **event-level defaults**. Detailed recurring sessions, individual occurrences and schedules are configured under **Board 2**.*

- **Acceptance Condition:**

The administrator can establish valid master timing parameters without duplicating occurrence-level scheduling configuration.

Screen 05 — Event Type & Behaviour Configuration

- **Purpose:**

Determine how the event behaves throughout the TICVAI platform.

Backend Configuration:

- Configure event as:
 - Performance
 - Workshop
 - Activity
 - Guided Tour
 - Marketing Event
 - Show/Technical Event
 - Other administrator-defined type
 - Configure Free / Paid / Mixed commercial behaviour.
 - Select Physical / Virtual / Hybrid operating model.
 - Enable or disable registration.
 - Enable or disable ticketing.
 - Enable or disable capacity control.
 - Enable or disable seating.
 - Enable or disable occurrence/session scheduling.
 - Enable or disable resource requirements.
 - Enable or disable check-in requirements.
 - Attach a predefined behaviour profile where applicable.
- **Acceptance Condition:**

The selected behaviour profile activates only the relevant downstream configuration areas required for that event.

Screen 06 — Event Configuration Features

- **Purpose:**

Control which configurable components are applicable to a specific event.

Backend Configuration:

Provide configurable ON/OFF controls for features including:

- Start date/time
- End date/time
- Duration
- Capacity
- Seating
- Seating categories
- Seat-map selection
- Multiple sessions
- Registration
- Invitation-only access
- Waiting list
- Over-sales
- Resources
- Accreditation
- Sponsorship
- Notifications
- Participant documents
- Waivers
- Financial tracking
- Operational check-in
- Event analytics
- Show dependency warnings when disabling a feature currently used by another configuration.
- **Acceptance Condition:**

Administrators can enable only the functionality needed by the event while dependency validation prevents invalid configurations.

Screen 07 — Event Template Library

- **Purpose:**
Create reusable event configurations to reduce repetitive administration.

Backend Configuration:

- Display existing templates.
- Create new event template.
- Template name and description.
- Template category.
- Applicable event types.
 - Include/exclude:
- Event metadata
- Ticket associations
- Pricing configuration
- Capacity configuration
- Seating configuration
- Schedules
- Resources
- Operational settings
- Communications
- Define template owner.
- Define tenant/global availability.
- Create template versions.
- Activate/deactivate templates.
- Define default template for an event category.
- **Acceptance Condition:**
Authorized administrators can create reusable templates containing approved configuration components and instantiate new events from them.

Screen 08 — Event Duplication & Clone Configuration

- **Purpose:**
Allow administrators to create a new event by safely copying an existing event.

Backend Configuration:

- Select source event.
- Enter new event name/reference.
 - Select components to duplicate:
- Core metadata
- Schedule structure
- Ticket configuration
- Pricing
- Capacity
- Seating plan association
- Resources
- Operational settings
- Communication rules
- Exclude transactional data automatically.
- Exclude historical attendance and sales.
- Recalculate dates relative to the new event where requested.
- Identify dependencies requiring manual reassignment.
- Preview clone configuration before creation.
- **Acceptance Condition:**
A duplicated event is created as a separate Draft configuration without copying historical transactional records or corrupting source-event configuration.

Screen 09 — Event Lifecycle & Status Governance

- **Purpose:**
Configure and control the event's governed lifecycle.

Backend Configuration:

Support lifecycle states:

- **Draft → Pending Approval → Approved → Published → On Sale → Sold Out → Completed → Archived**
with controlled alternatives such as:

- **Cancelled**

Configure:

- Permitted state transitions.
- Required approvals.
- Required configuration completeness.
- Publication prerequisites.
- On-sale prerequisites.
- Cancellation authority.
- Archive permissions.
- Status-based editing restrictions.
- Automatic status transitions where applicable.
- Role-based actions for each lifecycle state.

Important:

*This screen defines lifecycle governance. Detailed **cancellation, rescheduling and customer-impact workflows** belong to Board 7.*

- **Acceptance Condition:**

Users can move events only through permitted lifecycle transitions appropriate to their authority, with every transition validated and audited.

Screen 10 — Event Overview, Validation & Audit

- **Purpose:**

Provide a final backend configuration summary before an event is submitted for approval or publication.

Backend Configuration:

Display configuration status for:

- Event identity
- Dates and times
- Sessions
- Venue/spaces
- Capacity
- Seating
- Ticket products
- Pricing
- Registration/access rules
- Resources
- Communications
- Financial configuration
- Operational configuration

Provide:

- Configuration completeness score.
- Missing mandatory configuration.
- Warning conditions.
- Dependency conflicts.
- Publication blockers.
- Last modified user/date.
- Version number.
- Approval status.
- Full immutable audit-history access.
- “Validate Configuration” action.
- “Submit for Approval” action where authorized.

- **Acceptance Condition:**

The system identifies incomplete or conflicting event configuration before approval/publication, while authorized users can trace every configuration change through immutable audit history.

Board 1 Design Principle

Board 1 is the **Event Master Configuration layer**.

It must **not duplicate**:

- Session scheduling configuration from Board 2
- Venue/space design from Board 3
- Seating-map configuration from Board 4
- Registration/access policies from Board 5
- Resource allocation from Board 6

- Cancellation/rescheduling workflows from Board 7
- Dynamic minute/activity booking from Board 8
- Operational participant manifests from Board 9
- Finance, sponsorship, analytics and AI intelligence from Board 10

Instead, Board 1 provides the event master record and links administrators to those specialist configuration areas.

Board 2 — Event Schedule, Occurrences & Session Configuration

Matrix Coverage: 1.3.3, 1.3.15, 1.3.21, 1.3.29, 1.3.32, 1.3.33, with scheduling dependencies to 1.3.2.

BOARD 2: EVENT SCHEDULE, OCCURRENCES & SESSION CONFIGURATION

Objective: Configure when an event takes place, including multiple occurrences, showtimes, recurrence patterns, venues/spaces, blackout dates, dynamic durations and schedule changes.

10 SCREENS

Board Objective:

Provide administrators with the central backend configuration workspace for defining **when an event occurs**, how many performances/sessions it contains, recurrence patterns, showtimes, blackout dates, venue/space assignments, schedule exceptions and controlled schedule changes.

Board 2 manages the **schedule structure** of an event. It does not recreate Event Master Configuration from Board 1, detailed space configuration from Board 3, seating/capacity configuration from Board 4, or the advanced minute-based activity booking engine planned for Board 8.

Screen 01 — Event Schedule Command Center

- Purpose:** Provide administrators with a consolidated operational and configuration view of every occurrence, performance and session belonging to an event.

Backend Configuration:

- Select event from the Event Catalogue.
- Display event schedule in Calendar, Timeline and List views.
- Show all configured occurrences and sessions.
 - Display:**
 - Date
 - Start time
 - End time
 - Duration
 - Venue
 - Space
 - Session/performance status
 - Sales status
 - Capacity reference
 - Filter by venue, space, date range, occurrence type and status.
 - Identify unpublished or incomplete sessions.
 - Highlight scheduling conflicts.

- Highlight blackout-date conflicts.
- Show cancelled or rescheduled occurrences.
- Create a new occurrence/session directly from the command center.
- Bulk-select sessions for governed administrative actions.
- **Acceptance Condition:**
Authorized administrators can view and manage the complete schedule of an event from one backend workspace and identify schedule conflicts or incomplete configurations before publication.

Screen 02 — Occurrence / Performance Creation

- **Purpose:**
Create an individual occurrence, performance or session under an existing event.

Backend Configuration:

- Select parent event.
- Generate unique occurrence/performance ID.
- Enter internal occurrence name.
- Enter public display name where required.
- Select occurrence type.

- **Configure:**

- Date
- Start time
- End time
- Duration
- Time zone
- Select venue.
- Select hall/space.
- Select seating arrangement reference where applicable.
- Reference capacity configuration.
- Configure doors-open/check-in time.
- Set sales availability status.
- Set occurrence lifecycle status.
- Allow inheritance of Event Master defaults.
- Allow authorized occurrence-level overrides.

- **Acceptance Condition:**

Administrators can create a valid occurrence under an existing event while inheriting appropriate master-event settings and overriding only permitted occurrence-level attributes.

Screen 03 — Multiple Showtimes & Session Builder

- **Purpose:**
Allow administrators to rapidly create multiple sessions or showtimes for the same event.

Backend Configuration:

- Select date or date range.
- Add multiple showtimes per day.
- Define start time for each showtime.
- Define duration.
- Automatically calculate end time.
- Assign venue and space.
- Apply common configuration to all generated sessions.
- Configure different sessions for morning, afternoon or evening.
- Add/remove individual showtimes.
- Copy showtimes from one day to another.
- Bulk-create sessions.
- Preview generated occurrences before saving.
- Detect duplicate or overlapping sessions.
- Display estimated number of generated occurrences.

Example:

Saturday:

- 10:00
- 12:00
- 14:00
- 16:00

Sunday:

- 10:00
- 13:00
- 16:00
- **Acceptance Condition:**
Administrators can create multiple showtimes efficiently without manually creating each occurrence, while the system prevents invalid or conflicting schedules.

Screen 04 — Recurring Event Schedule Configuration

- **Purpose:**
Configure repeating event schedules using reusable recurrence rules.

Backend Configuration:

Support recurrence patterns including:

- Daily
- Weekly
- Selected weekdays
- Monthly
- Selected dates
- Custom recurrence

Configure:

- Recurrence start date.
- Recurrence end date.
- Days of week.
- Number of occurrences.
- Session start time.
- Session duration.
- Venue/space.
- Skip selected dates.
- Include additional dates.
- Preview recurrence calendar.
- Display number of occurrences to be generated.
- Allow editing of the recurrence rule after creation.
 - Determine whether changes apply to:
 - This occurrence
 - This and future occurrences
 - Entire series
- **Acceptance Condition:**
The system generates the correct occurrences from the recurrence rule while allowing controlled modification of individual sessions or the complete series.

Screen 05 — Venue & Space Schedule Assignment

- **Purpose:**
Associate each event occurrence with the correct configured venue, hall, space or location.

Backend Configuration:

- Select occurrence/session.
- Select venue.
- Select configured space.
- Select sub-space where applicable.
- Support different spaces for different occurrences of the same event.
- Support multiple locations under one event.
- Display space availability.
- Show existing bookings in the selected space.
- Detect schedule conflicts.
- Display space operating hours.
- Validate event timing against space availability.
- Reference applicable seating arrangement.
- Reference applicable capacity profile.
- Allow bulk reassignment of selected occurrences.
- Display warnings before changing a space containing existing bookings.

Important:

*This screen **assigns** configured venues/spaces to event sessions. Creation of spaces, sub-spaces and their access rules belongs to **Board 3**.*

- **Acceptance Condition:**

An occurrence cannot be assigned to an unavailable or conflicting space without an authorized override, and all reassignment actions are audit logged.

Screen 06 — Blackout Dates & Schedule Exceptions

- **Purpose:**

Configure dates and periods when events or sessions cannot operate normally.

Backend Configuration:

- Create blackout date.
- Configure blackout date range.
- Configure full-day blackout.
- Configure partial-day blackout.
 - Apply blackout to:
 - Event
 - Venue
 - Space
- Selected occurrence series
 - Define reason:
 - Venue closure
 - Maintenance
 - Public holiday
 - Private booking
 - Operational restriction
 - Other
- Configure recurring blackout rules.
- Define exception dates to recurrence patterns.
- Display impacted sessions.
- Prevent automatic creation of sessions during blackout periods.
- Allow authorized override with reason.
- Record override in audit history.
- **Acceptance Condition:**

The scheduling engine respects configured blackout periods and prevents invalid session creation unless an authorized user explicitly overrides the restriction.

Screen 07 — Dynamic Performance Duration Configuration

- **Purpose:**

Support performances where the customer can select from predefined duration options based on the event's starting time.

Backend Configuration:

- Enable/disable dynamic performance duration.
 - Configure permitted duration options such as:
 - 2 Hours
 - 3 Hours
 - 4 Hours
- Define applicable events/products.
- Define applicable venues/spaces/pods.
- Configure allowable start times.
- Calculate resulting end time automatically.
- Prevent duration from exceeding operating hours.
- Prevent overlap with another reserved session.
- Define minimum and maximum selectable duration.
- Configure duration-specific availability rules.
- Associate duration with relevant pricing profile.
- Preview resulting booking timeline.
- **Acceptance Condition:**

The system can generate the correct booking duration and end time from the customer's permitted duration selection while protecting space availability.

Screen 08 — Schedule Change & Rescheduling Configuration

- **Purpose:**

Control administrative changes to dates, times, venues or spaces after event occurrences have been created.

Backend Configuration:

- Select affected occurrence(s).
 - Change:
- Date
- Start time
- End time
- Duration
- Venue
- Space
- Show existing reservations affected.
- Show tickets affected.
- Show capacity impact.
- Show seating impact.
- Identify resource conflicts.
- Validate the proposed new schedule.
- Require reason for schedule change.
- Configure approval requirement based on event state.
- Determine whether customer communication is required.
- Trigger downstream ticket/reservation update workflow.
- Maintain previous and new schedule values.

Important:

*This screen manages the **schedule configuration change**. Customer communication execution and broader lifecycle workflows are handled under Board 7.*

- **Acceptance Condition:**
Authorized users can reschedule an occurrence only after the platform evaluates affected reservations, tickets, seating, resources and customers and records the complete change history.

Screen 09 — Schedule Conflict & Validation Center

- **Purpose:**
Automatically identify configuration problems before sessions are approved or published.

Backend Configuration:

Validate for:

- Duplicate occurrences.
- Overlapping sessions.
- Venue conflicts.
- Space conflicts.
- Sub-space conflicts.
- Blackout-date violations.
- Invalid operating hours.
- Invalid start/end times.
- Missing venue assignment.
- Missing space assignment.
- Missing capacity reference.
- Missing seating-plan reference where required.
- Resource scheduling conflicts.
- Invalid recurrence rules.
- Dynamic-duration conflicts.

Classify findings as:

- Error
- Warning
- Information

Provide:

- Conflict description.
- Affected sessions.
- Recommended correction.
- Direct link to affected configuration.
- Authorized override action where permitted.
- Mandatory override reason.
- **Acceptance Condition:**
Critical schedule conflicts must be resolved or explicitly overridden by an authorized role before affected occurrences can be published or placed on sale.

Screen 10 — Schedule Overview, Publication & Audit

- **Purpose:**
Provide the final schedule-control screen before occurrences are synchronized with downstream sales and operational services.

Backend Configuration:

Display:

- Total occurrences.
- Active occurrences.
- Draft occurrences.
- Published occurrences.
- Cancelled occurrences.
- Rescheduled occurrences.
- Sessions with warnings.
- Sessions with errors.
- Date range.
- Venues used.
- Spaces used.
- Recurrence rules.
- Blackout exceptions.

Provide governed actions:

- Validate Schedule
- Submit for Approval
- Publish Selected Sessions
- Publish Entire Schedule
- Unpublish
- Bulk Update
- Export Schedule

Maintain:

- Version number.
- Created by.
- Last modified by.
- Approval status.
- Publication status.
- Previous schedule versions.
- Immutable audit history.
- Detailed record of date/time/venue changes.

Acceptance Condition:

Only validated and authorized event occurrences can be published to downstream ticketing, sales, access-control and operational services, with every schedule version and administrative change fully traceable.

- **Board 2 — Configuration Boundary**
- Board 2 owns **WHEN and WHERE AN EVENT OCCURS**.

It includes:

- **Event → Occurrence → Date → Showtime → Duration → Venue/Space Assignment → Recurrence → Blackout → Validation → Publication**

It deliberately does **not** duplicate:

- **Board 1:** Event identity, metadata, event type, templates and master lifecycle.
- **Board 3:** Creation/configuration of venues, spaces and sub-spaces.
- **Board 4:** Seating layouts, seat categories, reservation and detailed capacity configuration.
- **Board 5:** Registration, invitations and attendance/access policies.
- **Board 6:** Staff, contractor, equipment and operational resource allocation.
- **Board 7:** Cancellation and attendee communication workflows.
- **Board 8:** Advanced minute-based bookings, purchased-minute balances and peak/off-peak time rules.
- **Board 9:** Participant/flyer manifests and live session sequencing.
- **Board 10:** Financial, sponsorship, analytics and AI configuration.
- **Board 2 High-Definition Design — 10 Screens**
- **Event Schedule Command Center**
- **Occurrence / Performance Creation**
- **Multiple Showtimes & Session Builder**
- **Recurring Event Schedule Configuration**
- **Venue & Space Schedule Assignment**
- **Blackout Dates & Schedule Exceptions**
- **Dynamic Performance Duration Configuration**

- **Schedule Change & Rescheduling Configuration**
- **Schedule Conflict & Validation Center**
- **Schedule Overview, Publication & Audit**

Design requirement: Each of these must appear as a **separate backend configuration screen** in the Board 2 high-definition design. They should not be represented as ten dashboard variations; each screen must visually demonstrate the actual administrative configuration described above.

Board 3 — Venue, Space & Event Location Configuration

Matrix Coverage: 1.3.6, 1.3.7, 1.3.29, 1.3.30, with configuration dependencies to 1.3.2, 1.3.3, 1.3.8, 1.3.9 and 1.3.22.

BOARD 3: VENUE, SPACE & EVENT LOCATION CONFIGURATION
Objective: Configure venues, spaces, sub-spaces, access rules, operating availability and multi-location structures to support physical, virtual and hybrid events.

10 SCREENS COVERS 1.3.6, 1.3.7, 1.3.29, 1.3.30

01 Venue & Space Command Center

Locations Overview

Name	Type	Capacity	Status	Spaces
City Arts Centre	Venue	25,000	Active	12
Main Auditorium	Space	1,800	Active	8
Orchestra Hall	Sub-Space	1,200	Active	5
Rehearsal Room	Sub-Space	400	Active	3
Rehearsal Hall	Space	200	Active	4
Rehearsal Room	Space	1,000	Active	4
Grand Convention Center	Venue	40,000	Active	10
Hall A	Space	1,000	Active	7
Hall B	Space	1,000	Active	7
Outdoor Venue	Venue	5,000	Active	6

8 Venues, 36 Spaces, 72 Sub-Spaces, 68 Spaces

02 Venue Master Configuration

Venue Information

Venue ID: VEN-0001, Country: Malaysia

Internal Name: City Arts Centre, City: Kuala Lumpur

Public Name: City Arts Centre, Address: 123 Arts Avenue, Kuala Lumpur, Malaysia

Venue Type: Performing Arts Centre, Size: Zone, Capacity: 25,000, Description: Downtown performing arts venue with multiple theaters, studios and exhibition spaces.

Venue Classification: Physical, Virtual, Hybrid, Operating Entity: City Arts Management, Default Access Opening (Before Event): 01:00, Primary Contact: Jane Lee, Status: Active

03 Space Master Configuration

Space Information

Space ID: SPC-0001, Floor / Level: Level 1

Space Name: Main Auditorium, Indoor / Outdoor: Indoor

Public Name: Main Auditorium, Default Capacity: 1,800

Parent Venue: City Arts Centre, Max Capacity: 1,800

Space Type: Auditorium, Setting Type: Fixed Setting, Status: Active

Usage Classification: Performance, Rehearsal, Activity, Creative Event, Operational Settings: Min Setup Time (hrs): 02:00, Min Turnover Time (hrs): 01:00, Buffer Time (mins): 05, Seat Map Available: Yes

04 Sub-Space & Space Hierarchy Builder

Hierarchy

- City Arts Centre
 - Main Auditorium
 - Orchestra Hall
 - Rehearsal Room
 - Rehearsal Hall
 - Rehearsal Room
 - Rehearsal Room
 - Rehearsal Room

Sub-Space Details

Sub-Space ID: SUB-0001-01, Parent Space: Main Auditorium, Type: Sub-Space, Capacity: 1,200

Can be booked independently: Yes, Independent Access Control: Yes, Blocks content when booked: Yes, Complex content booking: Yes, Status: Active

05 Space Usage & Event-Type Rules

Usage Rules for: Main Auditorium

Permitted Event Types: Performance, Rehearsal, Activity, Creative Event, Photo Event, Exhibition, Training, Conference, Other

Operational Rules: Min Attendees: 10, Max Attendees: 1,800, Standing Required: Yes, Standing Allowed: Yes, Mixed Seating/standing: Yes, Priority of Rules: Normal Level: Low

06 Space Access Rules Configuration

Access Rule List

Name	Room	Access Rule
Public Access	Public	Active
Ticket Holder	Ticket	Active
VIP Access	VIP	Active
Performance Access	Performer	Active
Staff Only	Staff	Active
Media Access	Media	Active
Accreditation	Accreditation	Active

Control who can access each space or sub-space based on credentials, time and conditions.

07 Space Operating Hours & Availability Rules

Operating Hours

Day	Start	End	Setup Before	Turnover After
Monday	09:00	22:00	01:00	01:00
Tuesday	09:00	22:00	01:00	01:00
Wednesday	09:00	22:00	01:00	01:00
Thursday	09:00	22:00	01:00	01:00
Friday	09:00	09:00	02:00	01:00
Saturday	09:00	09:00	02:00	01:00
Sunday	09:00	22:00	01:00	01:00

Exceptions

Start Date	End Date	Reason	Status
25/12/2025	25/12/2025	Christmas Day	Closed
01/01/2026	01/01/2026	New Year Day	Closed
30/06/2025	05/07/2025	Maintenance	Partial

Set operating hours, buffers, maintenance periods and availability exceptions.

08 Multi-Venue & Multi-Space Event Structure

Event: Summer Arts Festival 2026, Venue Name: City Arts Centre

Location Structure

- City Arts Centre (Primary)
 - Main Auditorium (Performance)
 - Rehearsal Room (Workshop)
 - Rehearsal Hall (Exhibitions)
 - Rehearsal Room (Exhibitions)
- Grand Convention Center
 - Hall A (Rehearsal & Studio)
 - Hall B (Broadcast Session)
 - Outdoor Park
 - Open Stage (Jukebox)

Details

Primary Venue: City Arts Centre, Total Venues: 3, Total Spaces: 6, Total Sub-Spaces: 11, Independent Capacities: Yes, Cross Venue Scheduling: Enabled, Shared Resources: Enabled

Validate Structure

09 Physical, Virtual & Hybrid Location Configuration

Attendance Mode: Physical, Virtual, Hybrid

Physical Location

Venue: City Arts Centre, Space: Main Auditorium, Physical Capacity: 1,800, Access Method: Ticket Scan, Entry Date: Main Entrance, Show Open: 01:00 - (Before event)

Virtual Location

Virtual Room: VRL, URL: https://zoom.us/j/432156789, Virtual Capacity: 2,000, Access Method: Virtual Link, Waiting Room: Yes

Hybrid Settings

Continue Attendance in Reporting: Yes, Show Attendance Type: Yes, Different Pricing: No

Configure physical, virtual or hybrid locations with separate capacities and access methods.

10 Space Validation, Impact & Audit

Validation Summary

Errors: 2, Warnings: 4, Info: 6, Passed: 18

Impact Analysis of deactivating this space

Event Type	Count
Performance	5
Rehearsal	10
Trainers / Rehearsals	1,245
Seating Maps	2
Resources Assigned	12
Access Rules	3

Audit Information

Created By: Admin User, Created On: 10/10/2025 09:05:00, Last Modified By: Admin User, Last Modified On: 10/10/2025 09:05:00, Version: 1.0

Actions: Validate, Save Draft, Submit for Approval, Publish, Download, Close, Export, View History

Validate configuration, analyze impact and maintain full audit trail of changes.

Board Objective

Provide administrators with the backend configuration environment for defining the **locations where events take place**, including venues, halls, rooms, activity areas, pods, virtual locations and hybrid configurations.

The board establishes the hierarchy:

Venue → Space → Sub-Space → Usage → Access Rules → Operating Availability → Event Assignment

It does **not** recreate the advanced graphical seat-map configuration. Seating layouts and seat-level configuration are handled in **Board 4**.

Screen 01 — Venue & Space Command Center

- Purpose:** Provide a centralized backend directory of all venues, spaces and sub-spaces available for event configuration.

Backend Configuration

Display a hierarchical structure:

- Venue**
 - Space
 - Sub-Space

Administrators can:

- View all configured venues.
- View spaces belonging to each venue.
- Expand spaces to display sub-spaces.
- Search by venue or space name.
 - Filter by:
 - Tenant
 - Region
 - Venue
 - Space type
 - Usage
 - Status
 - Physical/Virtual
 - Display configured maximum capacity.
 - Display current operational status.

- Show whether seating configuration exists.
- Show whether capacity profiles exist.
- Show upcoming event assignments.
- Identify incomplete configurations.
- Create new venue.
- Create new space.
- Duplicate permitted configurations.
- Activate/deactivate locations.
- Open configuration directly from the hierarchy.

Acceptance Condition

- Authorized administrators can locate and manage every event location from one controlled backend workspace while respecting tenant and venue permissions.

Screen 02 — Venue Master Configuration

- **Purpose:**
Configure the master venue record that contains one or more event spaces.

Backend Configuration

Configure:

- Venue ID.
- Internal venue name.
- Public venue name.
- Venue type.
- Venue description.
- Country.
- City.
- Address.
- Time zone.
- Operating entity.
- Tenant/business unit.
- Default currency reference.
- Primary contact.
- Venue status.
- Physical/virtual classification.
- Venue operating hours.
- Default access opening time.
- Venue-level restrictions.
- Internal notes.
- Custom metadata.
- Effective dates.

Administrators can configure whether venue attributes are:

- Mandatory
- Optional
- Inherited
- Overridable at space level

Acceptance Condition

- A venue can be created as a governed master record and used by authorized Event Management configuration without duplicating venue information for individual events.

Screen 03 — Space Master Configuration

- **Purpose:**
Create and configure an individual event space within a venue.

Backend Configuration

Configure:

- Space ID.
- Space name.
- Public display name.
- Parent venue.
- Space type.
- Space description.
- Default capacity.

- Maximum permitted capacity.
- Minimum operational capacity where applicable.
- Usage classification.
- Physical location/floor.
- Indoor/outdoor indicator.
- Fixed seating / flexible seating / standing.
- Seat-map availability.
- Accessibility characteristics.
- Operational status.
- Event types permitted.
- Effective dates.
- Internal administrative notes.

Example space types:

- Auditorium
- Theatre
- Exhibition Hall
- Workshop Room
- Activity Zone
- Guided-Tour Area
- Pod
- Arena
- Outdoor Area
- Classroom
- Meeting Room

Acceptance Condition

- Administrators can create spaces with sufficient operational attributes for Event Management to determine whether a space is suitable for an event or session.

Screen 04 — Sub-Space & Space Hierarchy Builder

- **Purpose:**
Allow a configured space to be divided into independently controlled sub-spaces.

Backend Configuration

Example hierarchy:

- **Main Exhibition Hall**
 - Hall A
 - Hall B
 - VIP Area
 - Workshop Zone 1
 - Workshop Zone 2

Administrators can:

- Create sub-space.
- Select parent space.
- Create multiple hierarchy levels where permitted.
- Define sub-space name.
- Define sub-space type.
- Configure sub-space capacity.
- Define permitted usage.
- Configure whether the sub-space can operate independently.
- Configure whether it can be booked separately.
- Configure whether parent-space booking blocks the sub-space.
- Configure whether sub-space bookings consume parent capacity.
- Activate/deactivate sub-spaces.
- Drag and reorganize hierarchy where permitted.
- Provide graphical hierarchy/tree visualization.

Acceptance Condition

- The system can represent a venue containing multiple spaces and sub-spaces without creating conflicting or mathematically invalid capacity relationships.

Screen 05 — Space Usage & Event-Type Rules

- **Purpose:**
Define which types of events and activities are permitted within each space.

Backend Configuration

Configure permitted usage such as:

- Performance
- Workshop
- Activity
- Guided Tour
- Marketing Event
- Corporate Event
- Private Event
- Exhibition
- Training
- Timed Activity

For each space configure:

- Permitted event types.
- Restricted event types.
- Minimum attendee requirements.
- Maximum attendee limits.
- Seating-required indicator.
- Standing permitted.
- Mixed seating/standing permitted.
- Resource requirements.
- Minimum setup time.
- Minimum teardown time.
- Turnaround/buffer time.
- Simultaneous usage restrictions.
- Operational restrictions.

Configure rule priority:

- **Venue Rule → Space Rule → Event Override**
- where authorized.

Acceptance Condition

- The scheduling system can determine whether a selected space is operationally suitable for the proposed event before allowing assignment.

Screen 06 — Space Access Rules Configuration

- **Purpose:**
Configure access policies independently for venues, spaces and sub-spaces.

Backend Configuration

Administrators can define:

- Public access.
- Ticket-holder access.
- Registration-required access.
- Invitation-only access.
- Staff-only access.
- VIP access.
- Performer access.
- Contractor access.
- Media access.
- Accreditation-required access.
- Membership access.
- Age restrictions.
- Time-based access.
- Entry-before-event rules.
- Re-entry policy.
- Restricted zones.

Configure:

- Access rule name.
- Applicable space/sub-space.
- Applicable event types.
- Applicable credential/entitlement.
- Start/end validity.
- Priority.
- Override permissions.

- Emergency override handling.
- Link rules to shared **Access Control / Entitlement services** rather than recreating access-control logic inside Event Management.

Acceptance Condition

- Each venue, space and sub-space can enforce its own configurable access policy while consuming shared platform access-control capabilities.

Screen 07 — Space Operating Hours & Availability Rules

- **Purpose:**
Define when a space can be used for event scheduling.

Backend Configuration

Configure:

- Standard operating hours.
- Day-of-week schedules.
- Weekend schedules.
- Seasonal schedules.
- Public-holiday rules.
- Opening time.
- Closing time.
- Minimum booking duration.
- Maximum booking duration.
- Setup buffer.
- Teardown buffer.
- Turnaround time.
- Maintenance periods.
- Temporary closures.
- Private-use periods.
- Availability exceptions.
- Display a weekly availability calendar.

Administrators can:

- Copy operating hours between days.
- Apply rules to multiple spaces.
- Create temporary exceptions.
- Define effective dates.
- Override rules with permission.
- Preview resulting availability.

Acceptance Condition

- Event scheduling cannot assign a space outside its permitted operating availability unless an authorized override is recorded.

Screen 08 — Multi-Venue & Multi-Space Event Structure

- **Purpose:**
Configure events that operate across several venues, halls, spaces or locations under a single event.

Backend Configuration

Administrators can build an event-location structure such as:

- **Festival 2027**
- → Venue A
 - Main Stage
 - Workshop Hall
- → Venue B
 - Exhibition Hall
 - VIP Lounge

Configure:

- Primary venue.
- Secondary venues.
- Multiple spaces.
- Session-to-space relationships.
- Venue priority.
- Space purpose.
- Event-area labels.
- Shared capacity relationships.

- Independent capacity relationships.
- Cross-location scheduling dependencies.
- Location-specific operating rules.
- Display a visual event-location hierarchy.

Acceptance Condition

- One event can operate across multiple configured locations while each occurrence/session maintains a clear venue and space relationship.

Screen 09 — Physical, Virtual & Hybrid Location Configuration

• Purpose:

Configure the attendance-location model for physical, virtual and hybrid events.

Backend Configuration

Select event-location mode:

- **Physical**
 - Venue required.
 - Space required where applicable.
 - Physical capacity rules apply.
- **Virtual**
 - Virtual location/profile.
 - Platform/service reference.
 - Virtual room identifier.
 - Access URL source.
 - Virtual attendance capacity.
 - Virtual access rules.
- **Hybrid**
 - Physical venue/space.
 - Virtual attendance channel.
 - Separate physical capacity.
 - Separate virtual capacity.
 - Combined attendance reporting.
 - Different access methods.

Configure:

- Attendance mode.
- Access-method association.
- Location display information.
- Virtual-room availability.
- Hybrid attendance limits.
- Session-specific attendance mode.
- Failover/fallback configuration where applicable.

Acceptance Condition

- Administrators can configure physical, virtual or hybrid event locations while maintaining separate capacity and access rules for each attendance method.

Screen 10 — Space Validation, Impact & Audit

• Purpose:

Validate venue and space configuration before it is used by live events and provide complete governance over changes.

Backend Configuration

Validate:

- Missing space attributes.
- Invalid capacities.
- Invalid parent/sub-space capacity.
- Missing operating hours.
- Missing access configuration.
- Conflicting usage rules.
- Missing seating configuration where seating is required.
- Existing event assignments.
- Upcoming occurrences.
- Space deactivation impact.
- Capacity-change impact.
- Access-rule-change impact.

- Operating-hours-change impact.

Before changing an active space, display:

- **Impact Analysis**
- Events affected.
- Sessions affected.
- Tickets/reservations affected.
- Seating configurations affected.
- Resources affected.
- Access rules affected.

Provide:

- Validate Configuration.
- Save Draft.
- Submit for Approval.
- Activate.
- Deactivate.
- Clone Configuration.
- View Version History.
- View Audit History.

Maintain immutable records of:

- Previous value.
- New value.
- Changed by.
- Change date/time.
- Change reason.
- Approval reference.

Acceptance Condition

- The system prevents high-impact venue or space configuration changes from being applied without validation, authorization and full audit traceability.

Board 3 Configuration Boundary

Board 3 owns:

WHERE THE EVENT TAKES PLACE

Board 3 configures:

Venue → Space → Sub-Space → Usage → Access → Operating Availability → Multi-Location → Physical/Virtual/Hybrid

It does **not** duplicate:

- **Board 1:** Event Master Configuration.
- **Board 2:** Occurrence dates, showtimes and recurrence schedules.
- **Board 4:** Graphical seating maps, sections, seat categories, seat-level inventory and reservation rules.
- **Board 5:** Guest registration and invitation policies.
- **Board 6:** Staff, contractors and equipment allocation.
- **Board 7:** Event cancellation/rescheduling communications.
- **Board 8:** Minute-based activity booking.
- **Board 9:** Live participant/flyer operations.
- **Board 10:** Finance, sponsorship, analytics and AI.

Board 3 — High-Definition Design Screens

The Board 3 visual must contain exactly these **10 separate backend configuration screens**:

1. **Venue & Space Command Center**
2. **Venue Master Configuration**
3. **Space Master Configuration**
4. **Sub-Space & Space Hierarchy Builder**
5. **Space Usage & Event-Type Rules**
6. **Space Access Rules Configuration**
7. **Space Operating Hours & Availability Rules**
8. **Multi-Venue & Multi-Space Event Structure**
9. **Physical, Virtual & Hybrid Location Configuration**
10. **Space Validation, Impact & Audit**

High-Definition Design Requirement: The visual must show the actual administrative configuration for all ten screens—not ten versions of a dashboard. Screen 4 should visibly demonstrate the space/sub-space hierarchy, Screen 6 the

configurable access-rule logic, Screen 7 the operating-hours/availability configuration, Screen 8 the multi-location hierarchy, and Screen 9 the Physical/Virtual/Hybrid configuration.

Board 4 — Seating, Capacity & Reservation Configuration

Matrix Coverage: 1.3.2, 1.3.8–1.3.13, 1.3.15, 1.3.16, with dependencies to Event Scheduling, Ticket Types, Pricing, Seat Management and Access Control.

Board Objective

Provide administrators with the backend configuration workspace for determining **how event capacity is structured, sold and reserved**, including general admission, assigned seating, seating categories, seating-layout associations, pricing-tier associations, reservation behavior, best-available logic, seat locking, oversales and waiting lists.

The configuration hierarchy is:

Event / Occurrence → Capacity Profile → Seating Mode → Seating Layout → Sections/Categories → Pricing Association → Reservation Rules → Seat Allocation → Waiting List

Board 4 consumes reusable venue/seat maps from the shared **Seat Management** capability rather than rebuilding the venue-mapping engine inside Event Management.

Screen 01 — Seating & Capacity Command Center

Purpose:

Provide a centralized backend view of seating, reservation and capacity configuration for every event and occurrence.

Backend Configuration

Display:

- Event.
- Occurrence/session.
- Venue.
- Space.
- Seating mode.
- Seating-layout reference.
- Total physical capacity.
- Sellable capacity.
- Reserved capacity.
- Held capacity.
- Sold/reserved quantity.
- Available quantity.
- Waiting-list count.
- Utilization percentage.
- Configuration status.

Support seating modes:

- General Admission.
- Assigned Seating.
- Mixed Seating.
- Capacity Only.
- No Capacity Control.

Provide filters for:

- Event.
- Venue.
- Space.
- Date.
- Seating mode.
- Capacity status.
- Publication status.

Highlight:

- Capacity conflicts.
- Oversold sessions.
- Missing seating plans.
- Invalid capacity relationships.
- Sold-out sessions.
- Waiting-list activity.

Acceptance Condition

- Administrators can review the complete seating and capacity position for an event and immediately identify occurrences requiring configuration or corrective action.

Screen 02 — Event Capacity Profile Configuration

- **Purpose:**
Define the capacity available for sale or registration for an event occurrence.

Backend Configuration

Configure:

- Physical venue capacity.
- Operational capacity.
- Sellable capacity.
- Reservation capacity.
- Complimentary allocation.
- Sponsor allocation.
- VIP allocation.
- Staff/operational allocation.
- Accessibility allocation.
- House holds.
- Contingency holds.

Display:

- **Physical Capacity**
- minus
- **Operational Restrictions**
- minus
- **Protected/Held Inventory**
- =
- **Sellable Capacity**

Allow:

- Event-level defaults.
- Occurrence-level overrides.
- Capacity profile templates.
- Effective dates.
- Capacity changes by session.
- Provide validation preventing configured sellable capacity from exceeding permitted physical capacity unless a governed oversale rule applies.

Acceptance Condition

- The system calculates a valid sellable capacity while preserving protected allocations and preventing unauthorized capacity increases.

Screen 03 — Seating Mode & Reservation Configuration

- **Purpose:**
Determine how customers obtain places/seats for an event.

Backend Configuration

Select:

- **General Admission**
- Customer purchases admission without a specific seat.
- **Assigned Seating**
- Customer receives a specific seat.
- **Mixed Seating**
- Some areas are assigned while others operate as general admission.

Configure:

- Enable/disable seat reservation.
- Reservation mandatory/optional.
- Seat selected during purchase.
- Seat assigned automatically.
- Allow customer seat selection.
- Allow POS seat selection.
- Allow online seat selection.
- Allow agent seat assignment.
- Allow best-available allocation.
- Allow adjacent-seat preference.
- Maximum seats per transaction.
- Release behavior.
- Allow rules to be inherited from the event and overridden by occurrence where authorized.

Acceptance Condition

- Each event can independently determine whether seats are reserved, assigned or unassigned and which sales channels can perform seat selection.

Screen 04 — Seating Layout & Arrangement Assignment

- **Purpose:**
Associate an event or occurrence with the appropriate seating arrangement configured for its space.

Backend Configuration

- Display available seating arrangements for the selected space.

Example:

- **Main Auditorium**
- Theatre Layout
- Concert Layout
- Reduced Capacity Layout
- VIP Layout
- Standing + Seating Layout

Administrators can:

- Select seating arrangement.
- Preview graphical seat map.
- View total seat count.
- View sections.
- View categories.
- View accessible seating.
- View restricted seats.
- View standing areas.
- Select default arrangement.
- Override arrangement per occurrence.
- Set effective dates.
- Validate arrangement against event capacity.
- Changing an arrangement with existing sales must trigger impact analysis.

Important Boundary

- The graphical seat map itself is created and maintained in the shared **Seat Management / Venue Mapping configuration module**.
- Event Management selects and applies the appropriate approved layout.

Acceptance Condition

- Only valid seating arrangements belonging to the assigned venue/space can be associated with the event occurrence.

Screen 05 — Section, Seat Category & Pricing Tier Association

- **Purpose:**
Define how seating sections/categories relate to commercial pricing tiers.

Backend Configuration

Display the selected seating structure:

- **Venue**
- → Section
- → Row
- → Seat Category

Example categories:

- VIP
- Premium
- Category A
- Category B
- Category C
- Accessible
- Restricted View
- General Admission

For each category configure:

- Category ID.
- Display name.
- Pricing-tier association.
- Ticket-product eligibility.
- Sales-channel eligibility.
- Color/display reference.
- Capacity.
- Availability.
- Priority.
- Effective date.

Support:

- **Seat Category → Pricing Profile**
- rather than hard-coding prices directly into the seat map.
- Allow different event occurrences using the same physical seat map to apply different commercial category/pricing relationships.

Acceptance Condition

- Administrators can commercially classify seating without modifying the underlying physical venue map.

Screen 06 — Pick-a-Seat & Best-Available Rules

- **Purpose:**
Configure how assigned seats are selected by customers, POS operators and sales agents.

Backend Configuration

Enable:

- **Pick a Seat**
- **Best Available**
- Both methods
- Automatic assignment only

For Best Available configure ranking criteria:

- Preferred category.
- Preferred section.
- Row priority.
- Distance/position preference.
- Adjacent-seat requirement.
- Accessibility requirement.
- Avoid isolated seats.
- Price tier.
- Availability.

Configure:

- Number of seats requested.
- Keep party together.
- Allow split seating.
- Maximum acceptable split.
- Channel-specific behavior.
- POS override permissions.
- Accessible-seat handling.
- Companion-seat rules.
- Provide a **Best Available Simulation** showing which seats would be selected for a sample request.

Acceptance Condition

- The allocation engine consistently selects seats according to configured priority rules while respecting inventory and accessibility restrictions.

Screen 07 — Seat Hold, Lock & Double-Booking Protection• **Purpose:**

Configure real-time controls preventing the same seat from being reserved or purchased by multiple customers.

Backend Configuration

Configure seat states:

- Available.
- Temporarily Held.
- Reserved.
- Sold.
- Blocked.
- House Hold.
- Unavailable.
- Released.

Configure:

- Shopping-cart hold duration.
- POS hold duration.
- Agent hold duration.
- Reservation hold duration.
- Payment-processing grace period.
- Automatic expiry.
- Automatic release.
- Manual release permissions.

Configure concurrency protection:

- Real-time seat locking.
- Transaction ownership.
- Session identifier.
- Lock timestamp.
- Lock expiry.
- Conflict handling.
- Retry behavior.

Display active locks including:

- Seat.
- Channel.
- User/session.
- Hold start.
- Expiry.
- Status.
- Provide authorized emergency-release action.

Acceptance Condition

- The same seat cannot be simultaneously confirmed to multiple transactions, and expired holds automatically return inventory to availability.

Screen 08 — Oversale & Capacity Protection Rules• **Purpose:**

Control whether an event is permitted to sell/register beyond its normal configured capacity.

Backend Configuration

- Enable/disable oversales.

Configure applicability:

- Free events only.
- Selected event types.
- Selected occurrences.
- Selected spaces.
- Selected channels.

Configure:

- Standard capacity.
- Oversale quantity.
- Oversale percentage.
- Maximum absolute capacity.
- Approval threshold.
- Warning threshold.

Example:

- **Standard Capacity:** 1,000
Permitted Free-Event Oversale: +10%
Maximum Registration: 1,100

Configure safeguards:

- Never exceed fire/legal capacity.
- Require administrator approval.
- Stop registration at maximum threshold.
- Alert operations at configured utilization.
- Disable oversales automatically for assigned seating where inappropriate.

Acceptance Condition

- Oversale is possible only where explicitly authorized and must never bypass configured safety/legal capacity restrictions.

Screen 09 — Waiting List & Automatic Capacity Allocation

- **Purpose:**
 Manage demand when an event or occurrence reaches sellable capacity.

Backend Configuration

- Enable/disable waiting list.

Configure:

- Waiting-list capacity.
- First-come-first-served priority.
- Membership priority.
- VIP priority.
- Customer-tier priority.
- Manual priority.
- Maximum waiting-list entries.
- Maximum tickets requested per entry.

When capacity becomes available through:

- Cancellation.
- Reservation expiry.
- Seat release.
- Capacity increase.

the system can:

- **Automatically Allocate**
- or
- **Send Purchase Invitation**

Configure:

- Offer expiry period.
- Customer response deadline.
- Automatic next-person promotion.
- Number of allocation attempts.
- Communication template.
- Payment requirement.
- Reservation hold duration.

Display queue:

Priority	Customer	Qty	Added	Status
1	Customer A	2	10:03	Waiting
2	Customer B	1	10:05	Offered
3	Customer C	4	10:07	Waiting

- Provide manual authorized reorder where permitted.

Acceptance Condition

- Released capacity can be automatically or manually reassigned according to configured waiting-list priority without exceeding available inventory.

Screen 10 — Capacity Validation, Monitoring & Audit

- **Purpose:**
Provide final validation, operational visibility and governance for seating and capacity configuration.

Backend Configuration

Display KPIs:

- Physical Capacity.
- Sellable Capacity.
- Seats Sold.
- Seats Reserved.
- Seats Held.
- Seats Available.
- Blocked Seats.
- Complimentary Allocation.
- Waiting List.
- Utilization %.

Validate:

- Physical vs sellable capacity.
- Seating-layout capacity.
- Category totals.
- Pricing-tier association.
- Unmapped seats.
- Invalid holds.
- Oversale rules.
- Waiting-list configuration.
- Channel seat-selection rules.
- Duplicate seat assignments.
- Capacity changes affecting sales.

Provide impact analysis before:

- Capacity reduction.
- Layout change.
- Category change.
- Seat blocking.
- Reservation-policy change.

Show:

- Reservations affected.
- Tickets affected.
- Customers affected.
- Revenue exposure.
- Occurrences affected.

Governed actions:

- Validate Configuration.
- Save Draft.
- Submit for Approval.
- Publish.
- Suspend Allocation.
- Export Capacity.
- View Version History.
- View Audit History.
- Maintain immutable history of every configuration and manual inventory action.

Acceptance Condition

- The system prevents invalid seating or capacity configuration from being published and provides complete traceability of changes affecting sellable inventory.

Board 4 Configuration Boundary

Board 4 owns:

HOW MANY PLACES CAN BE SOLD AND HOW THOSE PLACES/SEATS ARE ALLOCATED

The configuration flow is:

Event/Occurrence

↓

Capacity Profile

↓

General Admission / Assigned / Mixed

↓

Seating Layout Association

↓

Sections & Categories

↓

Pricing Tier Association

↓

Pick-a-Seat / Best Available

↓

Seat Locking

↓

Oversale Protection

↓

Waiting List

Board 4 does NOT duplicate:

- **Board 1:** Event Master Configuration.
- **Board 2:** Session/showtime scheduling.
- **Board 3:** Venue, space and sub-space master configuration.
- **Seat Management Module:** Physical graphical creation of rows, seats and venue maps.
- **Ticket Type Module:** Creation of ticket products.
- **Pricing Module:** Actual price calculation and pricing-rule creation.
- **Board 5:** Registration, invitations and attendee eligibility.
- **Board 6:** Event operational resources.
- **Board 7:** Event cancellation/rescheduling workflows.
- **Board 8:** Advanced minute/time-credit booking.
- **Board 9:** Live participant/session manifests.
- **Board 10:** Commercial analytics and AI.

Board 4 — High-Definition Design Screens

The Board 4 visual should contain exactly these **10 different backend configuration screens**:

1. **Seating & Capacity Command Center**
2. **Event Capacity Profile Configuration**
3. **Seating Mode & Reservation Configuration**
4. **Seating Layout & Arrangement Assignment**
5. **Section, Seat Category & Pricing Tier Association**
6. **Pick-a-Seat & Best-Available Rules**
7. **Seat Hold, Lock & Double-Booking Protection**
8. **Oversale & Capacity Protection Rules**
9. **Waiting List & Automatic Capacity Allocation**
10. **Capacity Validation, Monitoring & Audit**

High-Definition Design Requirement

The Board 4 design must visually show **actual backend configuration**, not ten generic dashboards.

In particular:

- **Screen 2** should visibly show the capacity calculation and allocations.
- **Screen 3** should show General Admission / Assigned / Mixed configuration.

- **Screen 4** should show the graphical seating-layout preview and layout selection.
- **Screen 5** should visibly map sections/categories to pricing tiers.
- **Screen 6** should show Pick-a-Seat and Best-Available configuration rules.
- **Screen 7** should show real-time seat states and locking rules.
- **Screen 8** should show oversale limits and protection thresholds.
- **Screen 9** should visibly show the waiting-list queue and automatic allocation settings.
- **Screen 10** should show validation, capacity KPIs, impact analysis and audit controls.

There must be **no duplicated screen or repeated dashboard design** across the ten screens.

Board 5 — Registration, Invitation, Access & Attendance Policy Configuration

Matrix Coverage: 1.3.4, 1.3.5, 1.3.25, 1.3.30, with dependencies to 1.3.10, 1.3.26 and 1.3.41.

BOARD 5: REGISTRATION, INVITATION, ACCESS & ATTENDANCE POLICY CONFIGURATION

Objective: Define who can register, how they are invited, booking restrictions, attendee data requirements, accreditation, attendance modes and event admission policies.

10 SCREENS COVERS
1.3.4, 1.3.5, 1.3.25, 1.3.30
(+ dependencies with 1.3.10, 1.3.26, 1.3.41)

The screenshot displays a comprehensive configuration interface for event management, organized into 10 distinct panels:

- 01 Registration & Attendance Command Center:** Overview of registration and attendance metrics, including a table of recent events and a list of registration channels.
- 02 Registration Mode Configuration:** Select registration mode (Public, Invitation Only, Controlled) and configure registration channels (Online, Agent, etc.).
- 03 Invitation-Only Event Configuration:** Configure invitation rules, including validation rules, invitation codes, and invitation validity periods.
- 04 Guest Booking Limit & Single-Slot Rules:** Configure guest booking limits, single-slot rules, and duplicate detection.
- 05 Attendee Data & Registration Form Configuration:** Configure attendee data fields and registration form settings.
- 06 Accreditation & Participant Category Configuration:** Configure accreditation categories and participant categories.
- 07 Physical, Virtual & Hybrid Attendance Rules:** Configure attendance rules for physical, virtual, and hybrid events.
- 08 Event Admission & Entry Policy Configuration:** Configure event admission rules, entry rules, and time windows.
- 09 Registration Approval, Exception & Override Rules:** Configure registration approval rules, exceptions, and overrides.
- 10 Registration Validation, Preview & Audit:** Configure registration validation rules, preview, and audit.

Board Objective

Provide administrators with the backend configuration workspace for defining **who can register for an event, how registration is controlled, whether attendance is public or invitation-only, how many bookings a guest can make, which attendance modes are permitted, what accreditation is required, and how attendee admission policies are enforced.**

The configuration flow is:

Event → Registration Mode → Audience → Invitation Rules → Guest Booking Limits → Attendee Data → Accreditation → Attendance Mode → Admission Rules → Validation

Board 5 does not recreate CRM customer profiles or the physical Access Control engine. It configures the Event Management policies that consume those shared TICVAI services.

Screen 01 — Registration & Attendance Command Center

- Purpose:** Provide administrators with a centralized backend view of registration, invitation and attendance-policy configuration across events and occurrences.

Backend Configuration

Display:

- Event.
- Occurrence/session.
- Registration mode.
- Attendance mode.
- Public/private status.
- Invitation requirement.
- Registration status.
- Registration opening date.
- Registration closing date.
- Guest booking limit.
- Accreditation requirement.
- Registered attendees.

- Invited attendees.
- Confirmed attendees.
- Waitlisted attendees.
- Checked-in attendees.

Support filters for:

- Event.
- Event type.
- Venue.
- Date.
- Registration mode.
- Invitation status.
- Attendance mode.
- Accreditation status.

Highlight:

- Missing registration configuration.
- Invalid booking restrictions.
- Invitation conflicts.
- Accreditation issues.
- Registration periods already closed.
- Attendance-policy conflicts.

Acceptance Condition

- Authorized administrators can review the registration and attendance configuration of every event and identify incomplete or conflicting policies from a single workspace.

Screen 02 — Registration Mode Configuration

- **Purpose:**
Determine how customers or guests are permitted to register or purchase admission for an event.

Backend Configuration

Configure registration mode:

- **Public Registration**
 - Anyone satisfying configured eligibility rules can register/purchase.
- **Invitation Only**
 - Only invited guests can register.
- **Public + Invitation**
 - General public registration is available while selected inventory or benefits are restricted to invited guests.
- **Internal / Controlled Registration**
 - Registration is available only through authorized operators or predefined customer groups.

Configure:

- Registration enabled/disabled.
- Registration start date/time.
- Registration end date/time.
- Registration channel.
- Online registration.
- POS registration.
- Agent registration.
- Call-center registration.
- Administrative registration.
- Guest checkout permitted.
- Account required.
- Authentication required.
- Registration approval required.

Acceptance Condition

- Every event can operate under a clearly defined registration model and unauthorized registration channels are automatically prevented.

Screen 03 — Invitation-Only Event Configuration

- **Purpose:**
Configure events or sessions where purchase/registration is available only to invited guests.

Backend Configuration

Enable:

- **Invitation Required — ON/OFF**

Configure invitation validation by:

- Email address.
- Mobile number.
- Customer profile.
- Membership.
- Invitation code.
- Unique invitation token.
- Corporate account.
- Guest list.

Configure:

- Invitation validity start/end.
- Maximum registrations per invitation.
- Transferability.
- Plus-one allowance.
- Invitation expiry.
- Invitation reuse.
- Require matching customer identity.
- Allow operator override.
- Invite-specific ticket/product eligibility.

Support invitation lists through:

- Manual entry.
- CRM segment association.
- Approved file import.
- API/integration.
- Corporate guest list.

Display:

- Invited.
- Delivered.
- Opened.
- Registered.
- Declined.
- Expired.

Acceptance Condition

- Invitation-only registration is available solely to guests satisfying the configured invitation validation rules.

Screen 04 — Guest Booking Limit & Single-Slot Rules

- **Purpose:**

Control how many sessions, slots or registrations an individual guest may hold for the same event.

Backend Configuration

Enable:

- **Restrict Guest to Single Slot — ON/OFF**

Configure restriction level:

- Per event.
- Per day.
- Per occurrence.
- Per activity.
- Per ticket type.
- Per customer profile.

Configure:

- Maximum slots per customer.
- Maximum tickets per slot.
- Maximum registrations per event.
- Maximum bookings per day.
- Household/account limits.
- Duplicate registration prevention.
- Same-email detection.
- Same-mobile detection.
- Customer-ID detection.

Configure repeat-booking behavior:

- Block.

- Warn.
- Require approval.
- Allow authorized override.
- Display conflict information before confirmation.

Acceptance Condition

- When single-slot restriction is enabled, the system prevents the same identified guest from making additional prohibited bookings while permitting authorized overrides where configured.

Screen 05 — Attendee Data & Registration Form Configuration

- **Purpose:**
Define what information must be captured from attendees during registration.

Backend Configuration

Configure standard fields:

- First name.
- Last name.
- Email.
- Mobile.
- Date of birth.
- Nationality.
- Gender where legally/applicably required.
- Company.
- Job title.
- Membership ID.
- Emergency contact.
- Accessibility requirements.

For each field configure:

- Enabled.
- Required.
- Optional.
- Hidden.
- Editable.
- Validation rule.

Create custom fields such as:

- Skill level.
- Experience level.
- Preferred session.
- Dietary requirement.
- Equipment requirement.
- T-shirt size.
- Special assistance.
- Participant category.

Configure:

- Customer-level fields.
- Order-level fields.
- Attendee-level fields.
- Event-specific fields.
- Link captured information to the appropriate CRM/customer record where permitted.

Acceptance Condition

- Administrators can configure event-specific registration forms without modifying the core customer-profile data model.

Screen 06 — Accreditation & Participant Category Configuration

- **Purpose:**
Configure accreditation categories and event passes for non-standard attendees such as staff, media, VIPs, contractors and performers.

Backend Configuration

Configure accreditation categories:

- Staff.
- Media.
- VIP.
- Contractor.

- Performer.
- Sponsor.
- Vendor.
- Volunteer.
- Security.
- Production Crew.
- Other.

For each category configure:

- Accreditation name.
- Pass type.
- Valid event.
- Valid occurrence.
- Valid venue.
- Valid spaces/sub-spaces.
- Valid date/time.
- Access level.
- Entry gate.
- Re-entry permission.
- Credential type.
- Approval required.
- Quantity/allocation.
- Responsible owner.

Configure accreditation lifecycle:

- **Requested → Pending Approval → Approved → Issued → Active → Suspended → Expired / Revoked**

Acceptance Condition

- Administrators can allocate controlled accreditation passes with defined validity, location and access privileges without creating normal customer tickets where inappropriate.

Screen 07 — Physical, Virtual & Hybrid Attendance Rules

- **Purpose:**
Determine how attendees participate in physical, virtual or hybrid events.

Backend Configuration

Configure attendance mode:

- **Physical**
 - Physical ticket/credential required.
 - Venue admission required.
 - Check-in required.
 - Physical capacity consumed.
- **Virtual**
 - Virtual access credential.
 - Virtual link/token.
 - Virtual attendance capacity.
 - Authentication requirement.
 - Access start/end time.
- **Hybrid**

Allow:

- Physical attendance.
- Virtual attendance.
- Customer selection.
- Administrator assignment.

Configure:

- Attendance-mode switching.
- Deadline for switching.
- Capacity impact when switching.
- Pricing impact reference.
- Ticket replacement requirement.
- Virtual-access issuance.
- Physical check-in behavior.
- Hybrid reporting classification.

Acceptance Condition

- Each attendee has a valid attendance mode and the platform applies the appropriate capacity, credential and admission rules for that mode.

Screen 08 — Event Admission & Entry Policy Configuration

- **Purpose:**
Configure the event-level rules determining whether an attendee is permitted to enter.

Backend Configuration

Configure admission requirements:

- Valid ticket.
- Valid registration.
- Valid accreditation.
- Valid membership.
- Invitation validation.
- Waiver completed.
- Required document completed.
- Required payment completed.
- Check-in completed.
- Age requirement.
- Entry time window.

Configure:

- Early-entry tolerance.
- Late-entry tolerance.
- Re-entry permitted.
- Multiple entry permitted.
- Entry gate restrictions.
- Venue/space restrictions.
- Session-specific admission.
- Manual override roles.

Define policy logic such as:

- **Valid Ticket + Completed Waiver + Correct Session = Admit**
- or
- **Valid Accreditation + Authorized Space + Valid Time Window = Admit**
- The actual credential scanning and gate decision engine remains part of the shared Access Control capability.

Acceptance Condition

- Event Management provides the complete admission-policy context required by Access Control to make a valid entry decision.

Screen 09 — Registration Approval, Exception & Override Rules

- **Purpose:**
Configure governed workflows for registrations requiring administrative review or exception handling.

Backend Configuration

Configure approval triggers such as:

- VIP registration.
- Restricted event.
- Capacity exception.
- Duplicate booking.
- Registration after deadline.
- Missing documentation.
- Special-access request.
- Accreditation request.
- Manual guest addition.

Configure:

- Approval workflow.
- Approver role.
- Escalation path.
- SLA.
- Approval expiry.
- Override permissions.

- Mandatory override reason.
- Supporting attachment requirement.

Support decisions:

- Approve.
- Reject.
- Request Information.
- Escalate.
- Override.
- Display complete decision history.

Acceptance Condition

- Exceptions to standard registration or attendance policies can only be processed by appropriately authorized users and are fully traceable.

Screen 10 — Registration Validation, Preview & Audit

• Purpose:

Provide final validation and governance before registration is opened to customers or invited attendees.

Backend Configuration

Display configuration summary:

- Registration Mode.
- Registration Period.
- Registration Channels.
- Invitation Rules.
- Guest Booking Limits.
- Registration Form.
- Accreditation.
- Attendance Modes.
- Admission Requirements.
- Approval Rules.

Validate:

- Missing mandatory fields.
- Invalid registration dates.
- Conflicting invitation rules.
- Invalid booking limits.
- Missing attendee information.
- Accreditation conflicts.
- Invalid attendance modes.
- Admission-rule conflicts.
- Missing waiver/document dependencies.
- Channel inconsistencies.

Provide **Registration Journey Preview**:

- **Discover / Invite**
- → **Authenticate**
- → **Register**
- → **Provide Attendee Details**
- → **Approval if Required**
- → **Receive Credential**
- → **Check In**
- → **Admission**

Provide governed actions:

- Validate Configuration.
- Preview Registration.
- Save Draft.
- Submit for Approval.
- Activate Registration.
- Suspend Registration.
- Clone Policy.
- View Version History.
- View Audit History.
- Maintain immutable audit history for all configuration changes and overrides.

Acceptance Condition

- Registration cannot be activated until mandatory policies are valid and the administrator can preview the resulting attendee journey before publication.

Board 5 Configuration Boundary

Board 5 owns:

WHO CAN ATTEND AND UNDER WHAT CONDITIONS

The configuration flow is:

Event

↓

Registration Mode

↓

Public / Invitation / Controlled

↓

Guest Booking Limits

↓

Attendee Information

↓

Accreditation

↓

Physical / Virtual / Hybrid Attendance

↓

Admission Requirements

↓

Approvals & Exceptions

↓

Validation

Board 5 does NOT duplicate:

- **Board 1:** Event master data and lifecycle.
- **Board 2:** Occurrence/showtime scheduling.
- **Board 3:** Venue/space configuration.
- **Board 4:** Seats, capacity inventory, waiting lists and seat allocation.
- **CRM Module:** Customer master profiles and segmentation engine.
- **Access Control Module:** Scanners, gates, credential validation and physical entry processing.
- **Ticket Type Module:** Ticket-product creation.
- **Board 6:** Staff/equipment/resource operational allocation.
- **Board 7:** Event cancellation and attendee communication workflows.
- **Board 8:** Minute-credit and advanced activity booking.
- **Board 9:** Live session participant operations.
- **Board 10:** Finance, sponsorship, analytics and AI.

Board 5 — High-Definition Design Screens

The Board 5 visual must contain exactly these **10 separate backend configuration screens**:

1. **Registration & Attendance Command Center**
2. **Registration Mode Configuration**
3. **Invitation-Only Event Configuration**
4. **Guest Booking Limit & Single-Slot Rules**
5. **Attendee Data & Registration Form Configuration**
6. **Accreditation & Participant Category Configuration**
7. **Physical, Virtual & Hybrid Attendance Rules**
8. **Event Admission & Entry Policy Configuration**
9. **Registration Approval, Exception & Override Rules**
10. **Registration Validation, Preview & Audit**

High-Definition Design Requirements

The visual must show **actual backend configuration**, not repeated dashboards.

- **Screen 1:** Registration/attendance command center with event-level statuses and KPIs.

- **Screen 2:** Public, Invitation Only, Public + Invitation and Controlled registration modes.
- **Screen 3:** Invitation validation, guest-list configuration and invitation statuses.
- **Screen 4:** Clearly show the **Single Slot Booking ON/OFF** control and booking-limit rules.
- **Screen 5:** Drag/configure attendee registration fields with Required/Optional controls.
- **Screen 6:** Accreditation categories and pass-access configuration.
- **Screen 7:** Physical / Virtual / Hybrid attendance configuration.
- **Screen 8:** Visual admission-rule logic such as **Ticket + Waiver + Correct Session → Admit**.
- **Screen 9:** Approval and exception workflow configuration.
- **Screen 10:** Validation results, attendee-journey preview, versioning and audit controls.

No screen should visually duplicate another screen. Each of the ten screens must represent its specific backend configuration function.

Board 6 — Event Resources & Operational Configuration

Matrix Coverage: 1.3.22, with operational dependencies to 1.3.25, 1.3.27, 1.3.41 and 1.3.49.

BOARD 6: EVENT RESOURCES & OPERATIONAL CONFIGURATION

Configure what resources are required, who/what is assigned, when and where for successful event delivery.

10 SCREENS COVERS
1.3.22 (+ dependencies with 1.3.25, 1.3.27, 1.3.41, 1.3.49)

Board Objective

Provide administrators with a centralized backend configuration workspace for defining **what operational resources an event requires, who or what is assigned, when those resources are required, where they are deployed, and whether the event is operationally ready.**

Board 6 covers:

Event → Resource Requirements → Staff / Contractors / Equipment → Roles → Shifts → Location Assignment → Availability → Conflict Detection → Operational Readiness

The Event Management module should **consume resources from TICVAI's shared Resource Management module** rather than recreating separate staff, equipment or resource master records.

Screen 01 — Event Resource Command Center

Purpose:

Provide administrators with a central overview of all resources required and allocated across events and occurrences.

Backend Configuration

Display:

- Event.
- Occurrence.
- Venue.
- Space.
- Event date/time.
- Required resources.
- Assigned resources.
- Unassigned requirements.
- Staff assigned.
- Contractors assigned.
- Equipment assigned.
- Resource conflicts.
- Resource readiness percentage.
- Resource status.

Resource categories include:

- Staff.
- Contractors.
- Equipment.
- Operational assets.
- Technical resources.
- Security.
- Guest services.
- Production.
- Cleaning.
- Medical.
- Transportation where applicable.

Provide filters for:

- Event.
- Venue.
- Space.
- Resource category.
- Resource type.
- Date.
- Shift.
- Assignment status.
- Availability.
- Conflict status.

Highlight:

- Missing resources.
- Understaffing.
- Double bookings.
- Expired qualifications.
- Unavailable equipment.
- Late assignments.
- Operational risks.

Acceptance Condition

- Administrators can immediately determine whether each event has sufficient operational resources and identify unresolved allocation issues from one backend workspace.

Screen 02 — Event Resource Requirement Configuration

- **Purpose:**
Define the resources required to operate an event before individual resources are assigned.

Backend Configuration

Configure requirement by:

- Event.
- Occurrence.
- Venue.
- Space.
- Event type.
- Expected attendance.
- Capacity tier.

Create resource requirements such as:

Resource	Required Qty
Event Manager	1
Supervisor	2
Ushers	15
Security	10
Ticket Scanners	8
Radios	20
First Aid	2
Cleaning Staff	6

Configure:

- Resource category.
- Resource type.
- Required quantity.
- Minimum quantity.
- Preferred quantity.
- Mandatory/optional.
- Start time.
- End time.
- Setup requirement.
- Teardown requirement.
- Location.
- Skill requirement.
- Certification requirement.
- Priority.
- Notes.

Allow requirement templates based on:

- Event type.
- Venue.
- Capacity.
- Attendance level.

Acceptance Condition

- Administrators can define operational requirements independently from individual assignments, allowing the system to calculate shortages and readiness.

Screen 03 — Staff & Role Assignment Configuration

- **Purpose:**
Assign internal staff to event operational roles.

Backend Configuration

Select event role such as:

- Event Manager.
- Duty Manager.
- Supervisor.
- Box Office.
- Ticketing Staff.
- Ushers.
- Guest Services.
- Access Control Operator.
- Security.
- Technical Staff.
- Production Staff.
- First Aid.
- Cleaning.
- Hospitality.

For each assignment configure:

- Staff member.
- Role.
- Event.
- Occurrence.
- Venue.
- Space.
- Reporting manager.
- Start time.
- End time.
- Check-in requirement.
- Required skill.
- Required certification.
- Assignment priority.
- Backup staff member.
- Display staff availability.

Show:

- Available.

- Assigned.
- Conflict.
- On Leave.
- Qualification Missing.
- Overtime Risk.
- Allow bulk staff assignment.

Acceptance Condition

- Only eligible and available staff can be assigned to governed event roles unless an authorized override is recorded.

Screen 04 — Contractor & External Workforce Configuration

- **Purpose:**
Configure external companies, contractors and temporary personnel required for event operations.

Backend Configuration

Configure:

- Contractor company.
- Service category.
- Contract reference.
- Event.
- Occurrence.
- Venue/space.
- Number of personnel.
- Supervisor.
- Service start.
- Service end.
- Access requirement.
- Accreditation requirement.
- Required documentation.
- Insurance/compliance reference.
- Equipment provided.
- Cost reference.
- Contact person.

Service categories can include:

- Security.
- Cleaning.
- Production.
- AV.
- Catering.
- Medical.
- Transportation.
- Temporary staffing.
- Technical services.

Track:

- Requested.
- Confirmed.
- Partially Confirmed.
- On Site.
- Completed.
- Cancelled.

Acceptance Condition

- Administrators can associate external workforce requirements with events while validating operational and compliance prerequisites.

Screen 05 — Equipment & Operational Asset Assignment

- **Purpose:**
Assign physical equipment and operational assets required by the event.

Backend Configuration

Resource types may include:

- Ticket scanners.
- POS terminals.

- Mobile POS.
- Radios.
- Tablets.
- Laptops.
- Printers.
- Wristband printers.
- Barriers.
- Signage.
- AV equipment.
- Lighting.
- Sound equipment.
- Furniture.
- Safety equipment.
- Operational vehicles.

Configure:

- Asset/resource ID.
- Resource type.
- Quantity.
- Event.
- Occurrence.
- Venue.
- Space.
- Deployment location.
- Required from.
- Required until.
- Setup time.
- Collection time.
- Responsible person.
- Condition.
- Backup asset.
- Return required.
- Notes.

Show asset status:

- Available.
- Reserved.
- Assigned.
- In Use.
- Maintenance.
- Damaged.
- Unavailable.

Acceptance Condition

- Equipment cannot be allocated to overlapping event requirements unless sufficient quantity exists or an authorized exception is approved.

Screen 06 — Event Shift & Roster Configuration

Purpose:

Configure when event personnel are required and organize staff assignments into operational shifts.

Backend Configuration

Create shifts such as:

- **Setup Shift**
14:00–17:00
- **Pre-Opening Shift**
17:00–18:00
- **Event Shift**
18:00–22:00
- **Closing Shift**
22:00–23:30

Configure:

- Shift name.
- Event.
- Occurrence.
- Start/end time.

- Venue.
- Space.
- Required roles.
- Required headcount.
- Break rules.
- Check-in time.
- Check-out time.
- Supervisor.
- Handover requirement.

Display roster by:

- Role.
- Employee.
- Location.
- Time.

Provide:

- Drag-and-drop assignment.
- Bulk assignment.
- Copy shift.
- Copy roster to another occurrence.
- Identify uncovered positions.
- Identify overlapping shifts.

Acceptance Condition

- Administrators can build complete event rosters and the platform identifies understaffed or conflicting shifts before operational publication.

Screen 07 — Resource Location & Deployment Configuration

- **Purpose:**
Define exactly where staff and operational resources must be deployed within the event.

Backend Configuration

Use the venue hierarchy from Board 3:

- **Venue**
- → Space
- → Sub-Space
- → Operational Point

Example:

- **Main Auditorium**
- → Main Entrance
- → Gate A
- → Gate B
- → VIP Entrance
- → Box Office
- → Seating Section A

Assign:

- Staff.
- Equipment.
- Scanner.
- POS terminal.
- Security.
- Guest-services staff.
- Supervisor.
- Operational assets.

Configure:

- Deployment start/end.
- Position capacity.
- Responsible team.
- Backup location.
- Movement permitted.
- Fixed/mobile assignment.
- Provide a visual deployment map or location hierarchy.

Acceptance Condition

- Every critical operational resource can be associated with a defined event location and time period.

Screen 08 — Resource Availability & Conflict Management

- **Purpose:**
Detect and resolve resource conflicts before the event takes place.

Backend Configuration

Automatically detect:

- Staff double booking.
- Contractor conflict.
- Equipment double allocation.
- Overlapping shifts.
- Travel-time conflicts.
- Missing qualification.
- Missing certification.
- Resource unavailable.
- Maintenance conflict.
- Insufficient resource quantity.
- Resource assigned outside permitted operating period.

Display conflict severity:

- **Critical**
- **Warning**
- **Information**

For each conflict display:

- Resource.
- Existing assignment.
- Conflicting assignment.
- Date/time.
- Location.
- Reason.
- Recommended alternatives.

Provide:

- Reassign.
- Replace.
- Adjust time.
- Add resource.
- Request additional resource.
- Authorized override.

Acceptance Condition

- Critical resource conflicts must be resolved or explicitly approved by an authorized user before operational readiness can be confirmed.

Screen 09 — Operational Readiness & Event Checklist Configuration

- **Purpose:**
Define and monitor the operational tasks that must be completed before an event is ready to open.

Backend Configuration

Create checklist categories:

- **Venue**
 - Space ready.
 - Seating ready.
 - Cleaning completed.
 - Signage installed.
- **Ticketing**
 - POS operational.
 - Scanners operational.
 - Ticket configuration synchronized.
- **Staffing**
 - Roster complete.
 - Staff confirmed.
 - Supervisors assigned.
- **Safety**
 - Security deployed.

- First aid ready.
- Emergency equipment checked.
- **Technical**
- AV tested.
- Network checked.
- Equipment operational.

For each checklist item configure:

- Task.
- Owner.
- Due date/time.
- Mandatory/optional.
- Evidence required.
- Approval required.
- Escalation rule.
- Completion status.

Statuses:

- Not Started.
- In Progress.
- Completed.
- Failed.
- Waived.

Calculate:

- **Operational Readiness %**
- Configure whether critical incomplete items block event opening.

Acceptance Condition

- Administrators can verify that all mandatory operational prerequisites are complete before the event is declared ready.

Screen 10 — Resource Validation, Approval & Audit

- **Purpose:**
Provide final validation and governance over event-resource configuration.

Backend Configuration

Display resource summary:

- Required staff.
- Assigned staff.
- Missing staff.
- Contractors required.
- Contractors confirmed.
- Equipment required.
- Equipment assigned.
- Open conflicts.
- Open checklist items.
- Critical operational risks.
- Readiness percentage.

Validate:

- Staff coverage.
- Shift coverage.
- Contractor confirmation.
- Equipment availability.
- Certification requirements.
- Resource conflicts.
- Deployment coverage.
- Checklist completion.
- Operational dependencies.

Provide impact analysis when:

- Event date changes.
- Event time changes.
- Venue changes.
- Space changes.
- Capacity changes.
- Event is cancelled.
- Show resources affected by the change.

Provide governed actions:

- Validate Resources.
- Save Draft.
- Submit for Approval.
- Approve Resource Plan.
- Publish Roster.
- Release Resources.
- Export Resource Plan.
- View Version History.
- View Audit History.

Maintain immutable history of:

- Assignments.
- Reassignments.
- Overrides.
- Resource releases.
- Approval actions.
- Readiness changes.

Acceptance Condition

- An event cannot achieve operational-ready status while critical resource requirements remain unresolved unless a formally authorized exception has been recorded.

Board 6 Configuration Boundary

Board 6 owns:

WHAT IS REQUIRED TO OPERATE THE EVENT

The operational flow is:

Event / Occurrence

↓

Resource Requirements

↓

Staff + Contractors + Equipment

↓

Roles & Shifts

↓

Venue/Space Deployment

↓

Availability

↓

Conflict Detection

↓

Operational Checklist

↓

Readiness

↓

Approval & Audit

Relationship with TICVAI Resource Management

This distinction is particularly important.

The **Resource Management module** owns the master resource information:

Resource Management

- Employee/resource master.
- Equipment master.
- Skills.
- Qualifications.
- Certifications.
- Availability calendars.
- Resource pools.
- Maintenance availability.
- Base rosters.

Event Management Board 6 consumes those resources and answers:

“Which resources do I need for this event, and where and when do I assign them?”

Therefore, Event Management should reference the shared Resource Management service rather than create duplicate resource records.

Board 6 Does NOT Duplicate

- **Board 1:** Event Master Configuration.
- **Board 2:** Event schedules and occurrences.
- **Board 3:** Venue/space master configuration.
- **Board 4:** Seating and capacity inventory.
- **Board 5:** Guest registration and accreditation-policy definition.
- **Resource Management Module:** Resource master records and core availability.
- **Frontline Operations Module:** Day-to-day POS/cashier operational management.
- **Board 7:** Event changes, cancellation and attendee communications.
- **Board 8:** Advanced activity/minute booking.
- **Board 9:** Live participant/flyer session operations.
- **Board 10:** Event financials, sponsorship, analytics and AI.

Board 6 — High-Definition Design Screens

The Board 6 visual must contain exactly these **10 different backend configuration screens**:

1. **Event Resource Command Center**
2. **Event Resource Requirement Configuration**
3. **Staff & Role Assignment Configuration**
4. **Contractor & External Workforce Configuration**
5. **Equipment & Operational Asset Assignment**
6. **Event Shift & Roster Configuration**
7. **Resource Location & Deployment Configuration**
8. **Resource Availability & Conflict Management**
9. **Operational Readiness & Event Checklist Configuration**
10. **Resource Validation, Approval & Audit**

High-Definition Design Requirements

The design must show **real backend configuration**, not repeated dashboard screens.

- **Screen 1:** Resource KPIs, shortages, conflicts and event resource status.
- **Screen 2:** Resource requirement quantities by category and role.
- **Screen 3:** Staff assignment with availability and qualifications.
- **Screen 4:** Contractor/service-company configuration.
- **Screen 5:** Equipment and operational-asset allocation.
- **Screen 6:** Visual shift/roster scheduling.
- **Screen 7:** Venue → Space → Operational Point deployment hierarchy.
- **Screen 8:** Conflict list with alternatives and resolution actions.
- **Screen 9:** Operational readiness checklist with completion percentage.
- **Screen 10:** Resource validation, impact analysis, approval and audit.

All ten screens must be visually and functionally distinct.

Board 7 — Event Lifecycle, Changes, Cancellation & Communications

Matrix Coverage: 1.3.19, 1.3.20, 1.3.21, 1.3.26, with dependencies to Ticketing, Payments, CRM, Access Control, Finance, Resource Management and Notification Services.

Board Objective

Provide administrators with the backend configuration workspace for governing an event after creation and publication, including **lifecycle transitions, event changes, postponements, cancellations, attendee impact, ticket/reservation treatment, communication orchestration and downstream synchronization.**

The configuration flow is:

Event State → Change Request → Impact Analysis → Approval → Ticket/Reservation Treatment → Communication → Synchronization → Completion & Audit

The fundamental principle is:

No material event change should be executed without understanding its downstream impact first.

Screen 01 — Event Lifecycle & Change Command Center

- **Purpose:**
Provide a central administrative view of events requiring lifecycle actions, schedule changes, postponement or cancellation.

Backend Configuration

Display:

- Event.
- Occurrence.
- Current lifecycle state.
- Venue.
- Date/time.
- Sales status.
- Change status.
- Change type.
- Tickets sold.
- Reservations.
- Attendees affected.
- Financial exposure.
- Communication status.

- Approval status.
- Synchronization status.

Support lifecycle states:

- Draft
- Pending Approval
- Approved
- Published
- On Sale
- Sold Out
- Completed
- Cancelled
- Archived

Additional operational change indicators:

- Change Requested
- Reschedule Pending
- Postponed
- Cancellation Pending
- Customer Action Required

Provide filters by:

- Event.
- Venue.
- Date.
- Lifecycle state.
- Change type.
- Approval status.
- Communication status.

Acceptance Condition

- Authorized administrators can identify every event undergoing a lifecycle or material operational change and understand its current processing status from one workspace.

Screen 02 — Lifecycle Transition Configuration

• Purpose:

Configure permitted transitions between event lifecycle states and the controls required for each transition.

Backend Configuration

Provide a visual workflow such as:

- **Draft**
- ↓
- **Pending Approval**
- ↓
- **Approved**
- ↓
- **Published**
- ↓
- **On Sale**
- ↓
- **Completed**
- ↓
- **Archived**

Alternative transitions include:

- **Published / On Sale → Cancelled**

Configure for each transition:

- Source state.
- Destination state.
- Permitted role.
- Approval required.
- Required configuration completeness.
- Required operational readiness.
- Reason required.
- Effective date/time.
- Notification required.
- Downstream synchronization required.

Configure automatic transitions where appropriate, such as:

- On Sale → Sold Out.
- Event Ended → Completed.
- Completed → Archived after X days.

Acceptance Condition

- Users can perform only lifecycle transitions permitted by configuration, authority and event conditions.

Screen 03 — Event Change Request Configuration

- **Purpose:**
Create a governed request when a published or on-sale event requires a material change.

Backend Configuration

Support change types:

- Date change.
- Start-time change.
- End-time change.
- Duration change.
- Venue change.
- Space change.
- Session change.
- Capacity change.
- Seating-layout change.
- Attendance-mode change.
- Postponement.
- Other material change.

Capture:

- Event.
- Occurrence(s).
- Existing configuration.
- Proposed configuration.
- Change reason.
- Requested by.
- Requested date/time.
- Effective date.
- Urgency.
- Supporting attachment.
- Internal notes.

Allow scope:

- Single occurrence.
- Selected occurrences.
- Future occurrences.
- Entire event.

Display:

- **BEFORE → AFTER**
- comparison.

Acceptance Condition

- Material changes to active events are initiated through a controlled change request containing both previous and proposed values.

Screen 04 — Change Impact Analysis

- **Purpose:**
Determine everything affected by a proposed event change before administrators approve it.

Backend Configuration

Analyze impact across:

- **Customers**
 - Customers affected.
 - Registrations affected.
 - Invitations affected.
 - Waitlisted customers.
- **Tickets**
 - Tickets issued.

- Tickets requiring update.
- Ticket validity impact.
- Seat assignments affected.
- **Reservations**
 - Active reservations.
 - Holds.
 - Waiting-list allocations.
- **Seating & Capacity**
 - Seating-layout impact.
 - Seat mapping conflicts.
 - Capacity differences.
- **Resources**
 - Staff assignments.
 - Contractor assignments.
 - Equipment reservations.
 - Rosters.
- **Finance**
 - Revenue affected.
 - Refund exposure.
 - Price differences.
 - Outstanding payments.
- **Access**
 - Credentials affected.
 - Admission validity.
 - Accreditation impact.
- **Communications**
 - Number of attendees requiring notification.
 - Available communication channels.

Classify impact:

- **Critical**
- **High**
- **Medium**
- **Low**

Acceptance Condition

- The system produces an impact assessment before a material event change can proceed to approval or execution.

Screen 05 — Event Cancellation Workflow Configuration

- **Purpose:**
Configure the controlled process for cancelling an entire event or selected occurrences.

Backend Configuration

Select cancellation scope:

- Entire event.
- Single occurrence.
- Selected occurrences.
- Remaining occurrences.

Configure:

- Cancellation reason.
- Cancellation category.
- Effective date/time.
- Internal notes.
- Public cancellation reason.
- Approval requirement.

Display:

- Tickets affected.
- Reservations affected.
- Attendees affected.
- Resources affected.
- Accreditation affected.
- Revenue exposure.
- Outstanding payments.

Configure downstream actions:

- Stop sales immediately.

- Release inventory.
- Release seat holds.
- Cancel reservations.
- Release resources.
- Invalidate access credentials.
- Trigger refund/exchange workflow.
- Trigger attendee communications.
- Update sales channels.
- Provide cancellation checklist before execution.

Acceptance Condition

- Cancellation cannot be finalized until mandatory impact, approval and downstream-action requirements have been satisfied.

Screen 06 — Ticket, Reservation & Customer Treatment Configuration

Purpose:

Define how affected customers and their existing transactions should be handled following a cancellation or event change.

Backend Configuration

Configure treatment options:

- Ticket remains valid.
- Automatically reissue ticket.
- Move ticket to new occurrence.
- Customer selects replacement occurrence.
- Exchange permitted.
- Refund permitted.
- Refund automatically initiated.
- Convert to credit/wallet where policy permits.
- Customer action required.
- No action required.

For reservations:

- Move reservation.
- Cancel reservation.
- Maintain reservation.
- Reassign seat.
- Release reservation.
- Re-enter waiting list.

Display:

- Applicable Ticket Service Policy.
- Refund policy reference.
- Exchange policy reference.
- Reschedule policy reference.
- Fee treatment.
- Price-difference treatment.

Important Boundary

- Board 7 determines **which treatment should be invoked because of the event change**.
- The detailed commercial rules governing refunds, exchanges, fees and price differences remain in the shared **Ticket Service Policy configuration**.

Acceptance Condition

- Every affected ticket and reservation receives an explicit treatment path before the change workflow can be completed.

Screen 07 — Attendee Communication Orchestration

Purpose:

Configure communications sent to attendees before, during or after events and especially following material event changes.

Backend Configuration

Supported channels:

- Email.
- SMS.
- WhatsApp.
- Push notification.

Configure communication triggers:

- Event reminder.

- Event approaching.
- Venue information.
- Schedule change.
- Venue change.
- Postponement.
- Cancellation.
- Replacement ticket issued.
- Refund initiated.
- Refund completed.
- Customer action required.
- Post-event message.

Configure:

- Audience.
- Communication template.
- Language.
- Channel priority.
- Fallback channel.
- Send immediately.
- Scheduled send.
- Retry rules.
- Delivery tracking.

Audience segmentation can include:

- All attendees.
- Selected occurrence.
- Selected ticket type.
- VIPs.
- Accreditation holders.
- Waitlisted customers.
- Physical attendees.
- Virtual attendees.
- Provide message preview before activation.

Acceptance Condition

- Administrators can configure targeted multi-channel communications linked to event lifecycle and change triggers with delivery status traceability.

Screen 08 — Change Approval & Governance Workflow

- **Purpose:**
Control who can approve high-impact changes and cancellations.

Backend Configuration

Configure approval triggers based on:

- Event status.
- Tickets already sold.
- Number of customers affected.
- Revenue exposure.
- Venue change.
- Date change.
- Cancellation.
- Capacity reduction.
- Seating-layout change.

Configure approval levels:

- **Event Manager**
- ↓
- **Operations Manager**
- ↓
- **Commercial / Finance**
- ↓
- **Senior Management**
- where required.

Configure:

- Approver role.
- Approval sequence.
- Parallel/sequential approval.

- SLA.
- Escalation.
- Delegation.
- Emergency approval.
- Supporting-document requirement.
- Mandatory reason.

Decision options:

- Approve.
- Reject.
- Request Changes.
- Escalate.
- Display complete approval history.

Acceptance Condition

- Material event changes cannot be executed until the required configured approvals have been completed.

Screen 09 — Downstream Synchronization & Change Execution

- **Purpose:**
Control and monitor propagation of approved event changes across TICVAI and connected external channels.

Backend Configuration

Synchronize approved changes with:

- Ticketing Catalogue.
- B2C.
- B2B.
- POS.
- Mobile application.
- Access Control.
- Seat Management.
- CRM.
- Finance.
- Resource Management.
- Notification Service.
- Reporting.
- External distribution channels/integrations.

Display synchronization status:

- Pending.
- Processing.
- Successful.
- Failed.
- Retry Required.

For each service display:

- Previous version.
- Target version.
- Last synchronization.
- Status.
- Error.
- Retry action.

Configure:

- Immediate synchronization.
- Scheduled synchronization.
- Retry policy.
- Failure escalation.
- Rollback handling where technically supported.
- Prevent event change from being marked fully completed while mandatory downstream synchronization remains unresolved.

Acceptance Condition

- Approved changes propagate reliably to required platform services and failed synchronization is visible, recoverable and auditable.

Screen 10 — Change Completion, Timeline & Audit

- **Purpose:**
Provide the final administrative record of the complete event-change or cancellation process.

Backend Configuration

Display a visual timeline:

- **Change Requested**
- → **Impact Assessed**
- → **Approved**
- → **Transactions Processed**
- → **Customers Notified**
- → **Systems Synchronized**
- → **Completed**

Show summary:

- Event.
- Change type.
- Original configuration.
- New configuration.
- Reason.
- Requested by.
- Approved by.
- Customers affected.
- Tickets affected.
- Refunds/exchanges initiated.
- Communications sent.
- Synchronization status.
- Completion date/time.

Provide audit history covering:

- Lifecycle transitions.
- Schedule changes.
- Venue changes.
- Capacity changes.
- Cancellation.
- Approval decisions.
- Overrides.
- Communications.
- Synchronization.
- Manual actions.

Provide governed actions:

- Validate Completion.
- Retry Failed Actions.
- Export Impact Report.
- Export Change Report.
- View Communication History.
- View Transaction Treatment.
- View Version History.
- View Full Audit History.

Acceptance Condition

- Every material event change has a complete immutable record connecting the original configuration, approval, customer treatment, communications, downstream execution and final state.

Board 7 Configuration Boundary

Board 7 owns:

WHAT HAPPENS WHEN AN EVENT CHANGES

The workflow is:

Lifecycle

↓

Change / Cancellation Request

↓

Impact Analysis

↓

Approval

↓

Ticket & Reservation Treatment

↓

Customer Communication

↓

Downstream Synchronization

↓

Completion

↓

Audit**Board 7 Does NOT Duplicate**

- **Board 1:** Creation and master event configuration.
- **Board 2:** Normal schedule/occurrence configuration.
- **Board 3:** Venue and space master configuration.
- **Board 4:** Seating/capacity configuration.
- **Board 5:** Registration and attendance-policy configuration.
- **Board 6:** Normal resource planning and assignment.
- **Ticket Service Policy Module:** Detailed refund, exchange, reschedule and fee-policy rules.
- **CRM Module:** Customer master data and marketing segmentation.
- **Finance Module:** Actual accounting/refund ledger processing.
- **Notification Service:** Technical message-delivery engine.
- **Board 8:** Advanced minute/activity booking.
- **Board 9:** Live participant/session operations.
- **Board 10:** Financial performance, sponsorship, analytics and AI.

Board 7 — High-Definition Design Screens

The Board 7 visual must contain exactly these **10 separate backend configuration screens**:

1. **Event Lifecycle & Change Command Center**
2. **Lifecycle Transition Configuration**
3. **Event Change Request Configuration**
4. **Change Impact Analysis**
5. **Event Cancellation Workflow Configuration**
6. **Ticket, Reservation & Customer Treatment Configuration**
7. **Attendee Communication Orchestration**
8. **Change Approval & Governance Workflow**
9. **Downstream Synchronization & Change Execution**
10. **Change Completion, Timeline & Audit**

High-Definition Design Requirements

The Board 7 design must show actual backend configuration and workflow—not ten similar monitoring dashboards.

- **Screen 1:** Lifecycle/change command center with events and change statuses.
- **Screen 2:** Visual lifecycle workflow with configurable transition rules.
- **Screen 3:** Clear **Before → After** event-change configuration.
- **Screen 4:** Impact analysis covering customers, tickets, seats, resources, finance and access.
- **Screen 5:** Cancellation workflow with scope, reasons and downstream actions.
- **Screen 6:** Ticket/reservation treatment options including reissue, move, exchange and refund routing.
- **Screen 7:** Email/SMS/WhatsApp/Push trigger and audience configuration.
- **Screen 8:** Visual multi-level approval workflow.
- **Screen 9:** Integration/synchronization status across TICVAI services.
- **Screen 10:** Full change timeline, completion validation and immutable audit history.

Every screen must be visually and functionally different, and every action must represent backend configuration or governed administration rather than a customer-facing interface.

Board 8 — Dynamic Activities, Time-Slot & Minute Booking Engine Configuration

Matrix Coverage: 1.3.32–1.3.40, 1.3.43, with dependencies to Customer/CRM, Pricing, Payments, Capacity, POS and Event Scheduling.

BOARD 8: DYNAMIC ACTIVITIES, TIME-SLOT & MINUTE BOOKING ENGINE CONFIGURATION
Configure time-based activities, variable durations, minute packages, pricing periods, walk-in booking and capacity consumption rules.

10 SCREENS COVERS MATRIX 1.3.32 – 1.3.40, 1.3.43

The screenshot displays a comprehensive configuration interface for dynamic activities, time-slot, and minute booking. It is organized into 10 main sections, each with a specific configuration goal:

- Dynamic Activity Booking Command Center:** Overview of activities, booking status, and key metrics (e.g., 18 activities, 324 bookings, 76.4% success rate, 2,145 bookings, 1,032 cancellations).
- Activity Session & Slot Template Configuration:** Configure activity details, session templates, and booking rules.
- Variable Duration & Dynamic Performance Configuration:** Set up variable durations and performance metrics.
- First-Time vs Repeat Customer Booking Rules:** Define rules for first-time and repeat customers.
- Prepaid Minute Package & Customer Balance Configuration:** Configure prepaid minute packages and customer balances.
- Multi-Date Minute Allocation & Booking Rules:** Set up multi-date minute allocation and booking rules.
- Peak, Off-Peak & Super Prime Time Configuration:** Configure pricing periods and booking rules for different times.
- Walk-In / There-and-Then Booking Configuration:** Set up walk-in and there-and-then booking rules.
- Profile Minute Adjustment & Capacity Consumption Rules:** Adjust profile minutes and define capacity consumption rules.
- Dynamic Booking Validation, Simulation & Audit:** Validate booking rules, run simulations, and maintain full audit.

Board Objective

Provide administrators with the backend configuration environment for **time-based and duration-based activities** where customers purchase or consume minutes, choose dynamic durations, book different time slots, maintain prepaid time balances, and consume operational capacity differently according to participant or product type.

This board supports businesses such as:

- Indoor skydiving.
- Activity pods.
- Simulators.
- Climbing activities.
- Training sessions.
- Coaching sessions.
- Experiences sold by duration.
- Attractions sold by time slot.
- Activities sold through prepaid time packages.

The core model is:

Activity → Session Template → Time Slot → Bookable Duration → Customer/Product Rules → Minute Balance → Pricing Period → Capacity Consumption → Booking

Screen 01 — Dynamic Activity Booking Command Center

- **Purpose:**
Provide administrators with a central view of all dynamic activity, slot and minute-based booking configurations.

Backend Configuration

Display:

- Activity.
- Venue.
- Space/Pod.
- Booking model.
- Session duration.

- Slot interval.
- Minimum booking.
- Maximum booking.
- Available minutes.
- Reserved minutes.
- Sold minutes.
- Peak period.
- Current utilization.
- Configuration status.

Support booking models:

- Fixed Time Slot.
- Variable Duration.
- Prepaid Minutes.
- Dynamic Performance Duration.
- Walk-In.
- Hybrid.

Provide filters for:

- Activity.
- Venue.
- Space.
- Date.
- Booking model.
- Customer type.
- Pricing period.
- Status.

Highlight:

- Overallocated sessions.
- Invalid duration rules.
- Insufficient capacity.
- Pricing-period conflicts.
- Unassigned time slots.
- Customer-balance issues.

Acceptance Condition

- Administrators can monitor and access all dynamic activity-booking configurations from a single governed workspace.

Screen 02 — Activity Session & Slot Template Configuration

- **Purpose:**
Define the master time structure used to generate bookable activity sessions.

Backend Configuration

Configure:

- Activity.
- Venue.
- Space/Pod.
- Session length.
- Slot interval.
- Opening time.
- Closing time.
- Days of operation.
- Booking increment.

Example:

- **Operating Period:** 09:00–22:00
Session Length: 30 minutes

Generated sessions:

- 09:00–09:30
- 09:30–10:00
- 10:00–10:30
- 10:30–11:00

Configure:

- Number of simultaneous participants.
- Total session capacity.
- Setup/buffer time.

- Cleanup/reset time.
- Minimum gap.
- Booking cutoff.
- Advance-booking window.
- Same-day booking permitted.
- Walk-in permitted.
- Provide preview of generated sessions before activation.

Acceptance Condition

- The platform generates valid bookable sessions according to configured operating hours, session duration and slot intervals.

Screen 03 — Variable Duration & Dynamic Performance Configuration

- **Purpose:**
Allow customers to choose different booking durations from the same starting time.

Backend Configuration

Enable:

- **Variable Duration Booking — ON/OFF**

Configure allowed durations such as:

- 30 Minutes.
- 60 Minutes.
- 90 Minutes.
- 2 Hours.
- 3 Hours.
- 4 Hours.

Configure:

- Minimum duration.
- Maximum duration.
- Duration increment.
- Allowed duration by activity.
- Allowed duration by product.
- Allowed duration by customer type.
- Allowed duration by space/pod.

Example:

Customer selects:

- **Start: 10:00**

and chooses:

- **2 Hours**

System automatically reserves:

- **10:00–12:00**

If the customer selects:

- **4 Hours**

the system reserves:

- **10:00–14:00**

Validate continuously against:

- Existing bookings.
- Operating hours.
- Blackout periods.
- Space availability.
- Capacity.

Acceptance Condition

- The booking engine automatically calculates and reserves the required consecutive capacity based on the selected duration.

Screen 04 — First-Time vs Repeat Customer Booking Rules

- **Purpose:**
Configure different minimum-purchase and booking rules according to customer experience/profile.

Backend Configuration

Create customer categories such as:

- First-Time Customer.
- Repeat Customer.

- Professional.
- Member.
- VIP.
- Instructor/Staff.

For **First-Time Customers**, configure:

- Minimum purchase minutes.
- Minimum booking duration.
- Mandatory introductory session.
- Mandatory briefing.
- Additional operational capacity consumption.
- Waiver required.
- Instructor required.

For **Repeat Customers**, configure:

- Minimum purchase of X minutes.
- Minimum booking amount.
- Booking increments.
- Reduced setup/briefing requirement.
- Different capacity consumption.

Example:

- **First-Time Customer**
- Minimum purchase: **2 minutes**
- **Repeat Customer**
- Minimum purchase: **10 minutes**
- Rules must be configurable by activity and product.

Acceptance Condition

- The booking engine automatically applies the correct minimum-purchase and booking rules based on the identified customer profile.

Screen 05 — Prepaid Minute Package & Customer Balance Configuration

- **Purpose:**
Support products where customers purchase a quantity of minutes and consume those minutes across future bookings.

Backend Configuration

Configure minute packages such as:

- 10 Minutes.
- 30 Minutes.
- 60 Minutes.
- 120 Minutes.
- Custom Minute Package.

For each package configure:

- Purchased minutes.
- Bonus minutes.
- Validity period.
- Activation date.
- Expiry.
- Activity eligibility.
- Venue eligibility.
- Customer eligibility.
- Transfer permitted.
- Sharing permitted.
- Minimum redemption.
- Redemption increment.

Customer account displays:

- **Purchased:** 60 min
- **Used:** 22 min
- **Reserved:** 10 min
- **Available:** 28 min

Configure balance states:

- Available.
- Reserved.
- Consumed.
- Expired.
- Adjusted.

- Refunded.

Acceptance Condition

- The platform maintains an accurate customer minute balance and prevents bookings that exceed the customer's available entitlement unless another permitted payment method is used.

Screen 06 — Multi-Date Minute Allocation & Booking Rules

- **Purpose:**
Allow customers who purchase a block of minutes to divide those minutes across different sessions and dates.

Backend Configuration

Example:

Customer owns:

- **60 minutes**

Customer books:

- Monday — 10 minutes.
- Wednesday — 20 minutes.
- Saturday — 15 minutes.

Remaining:

- **15 minutes**

Configure:

- Multiple bookings permitted.
- Multiple dates permitted.
- Maximum future bookings.
- Minimum minutes per booking.
- Maximum minutes per booking.
- Booking increment.
- Same-day multiple booking.
- Consecutive session booking.
- Non-consecutive booking.
- Maximum advance booking period.

Provide a **Minute Allocation Timeline** showing:

- **Balance → Reserved → Consumed → Remaining**
- Prevent the same minute entitlement from being allocated twice.

Acceptance Condition

- Customers can distribute prepaid minutes across permitted dates and sessions while the system maintains accurate available and reserved balances.

Screen 07 — Peak, Off-Peak & Super Prime Time Configuration

- **Purpose:**
Configure time-of-day and day-of-week pricing periods used for activity bookings.

Backend Configuration

Support pricing periods such as:

- Off-Peak.
- Standard.
- Peak.
- Prime.
- Super Prime.
- Custom.

Administrators can configure:

Period	Day	From	To
Off-Peak	Mon–Thu	09:00	16:00
Peak	Mon–Thu	16:00	20:00
Prime	Fri	14:00	20:00
Super Prime	Sat	17:00	22:00

- Provide graphical weekly time grid.

Allow:

- Drag-to-adjust period.
- Copy to other days.
- Seasonal rules.
- Holiday rules.
- Date exceptions.
- Real-time master-rule changes.
- Effective date/time.
- Future scheduled changes.
- Pricing periods link to the shared **Pricing Engine**.

Changing:

- **Saturday Prime Start: 17:00 → 16:00**
- should automatically affect future eligible availability/pricing according to governance rules.

Acceptance Condition

- Administrators can change master pricing periods without manually modifying individual time slots.

Screen 08 — Walk-In / There-and-Then Booking Configuration

- **Purpose:**
Support customers who arrive or call without a prior booking and need immediate registration and allocation.

Backend Configuration

Enable:

- **Walk-In Booking — ON/OFF**

Supported channels:

- Front Desk.
- POS.
- Call Center.
- Authorized Operator.

Workflow:

- **Identify/Create Customer**
- ↓
- **Select Activity**
- ↓
- **Select Product / Minutes**
- ↓
- **Find Immediate Availability**
- ↓
- **Allocate Session**
- ↓
- **Collect Required Information**
- ↓
- **Payment**
- ↓
- **Confirm Booking**

Configure:

- Minimum lead time.
- Allow current session.
- Allow next available session.
- Operator override.
- Customer profile creation required.
- Waiver requirement.
- Payment requirement.
- Temporary reservation hold.
- Walk-in priority.
- Display **Next Available Sessions** in real time.

Acceptance Condition

- Authorized operators can create immediate bookings without bypassing configured capacity, customer, payment or waiver rules.

Screen 09 — Profile Minute Adjustment & Capacity Consumption Rules

- **Purpose:**
Control manual minute adjustments and define how different participant types consume operational session capacity.

Backend Configuration

• A. Profile Minute Adjustment

Authorized profiles can:

- Add minutes.
- Remove minutes.
- Correct balance.
- Add promotional minutes.
- Add compensation minutes.
- Restore expired minutes where permitted.

Require:

- Adjustment reason.
- Adjustment type.
- Authorized role.
- Approval threshold.
- Effective date.
- Notes.
- Maintain full audit trail.

• B. Capacity Consumption / Uplift

- Configure actual operational consumption by product/customer type.

Example from the matrix:

A first-time flyer purchases:

- **2 × 1-minute flights = 2 customer minutes**

but operationally consumes:

- **2 minutes 40 seconds**
- from the 30-minute session because entry/exit/setup time is required.

Configure:

- **Purchased Duration:** 2:00
- **Operational Uplift:** +0:40
- **Capacity Consumed:** 2:40

For professional flyers:

- **Purchased Duration:** 2:00
- **Operational Uplift:** 0:00
- **Capacity Consumed:** 2:00

Configure uplift by:

- Product.
- Customer type.
- Activity.
- Experience level.
- Session type.

Acceptance Condition

- The platform differentiates between **customer entitlement minutes** and **actual operational capacity consumption**, ensuring session capacity remains accurate.

Screen 10 — Dynamic Booking Validation, Simulation & Audit

• Purpose:

Validate the complete dynamic booking configuration before activation.

Backend Configuration

Display summary:

- Activities.
- Session templates.
- Slot intervals.
- Variable durations.
- Customer rules.
- Minute packages.
- Pricing periods.
- Walk-in rules.
- Capacity uplift.
- Active bookings.

Validate:

- Invalid slot structures.

- Duration conflicts.
- Missing pricing periods.
- Customer-rule conflicts.
- Minute-balance rules.
- Capacity over-allocation.
- Uplift calculation.
- Walk-in rules.
- Operating-hour conflicts.
- Provide **Booking Simulation**.

Example:

- **Customer:** First-Time Flyer
Package: 2 × 1 Minute
Selected Session: 14:00–14:30
Pricing Period: Peak
Purchased Minutes: 2:00
Operational Uplift: 0:40
Session Capacity Consumed: 2:40
Result: ✓ Booking Valid

Provide actions:

- Run Validation.
- Run Booking Simulation.
- Save Draft.
- Submit for Approval.
- Activate Rules.
- Suspend Rules.
- Clone Configuration.
- View Version History.
- View Audit History.

Maintain immutable audit records for:

- Minute adjustments.
- Pricing-period changes.
- Capacity-uplift changes.
- Booking-rule changes.
- Overrides.

Acceptance Condition

- Dynamic booking rules cannot be activated until duration, pricing, minute entitlement and operational-capacity calculations pass validation.

Board 8 Configuration Boundary

Board 8 owns:

HOW TIME-BASED ACTIVITIES ARE SOLD AND CONSUMED

The configuration flow is:

Activity

↓

30-Minute / Configurable Session

↓

Bookable Time Slots

↓

Variable Duration

↓

First-Time / Repeat / Pro Rules

↓

Prepaid Minutes

↓

Multi-Date Allocation

↓

Peak / Off-Peak / Super Prime

↓

Walk-In

↓

Operational Capacity Uplift

↓

Validation

Critical TICVAI Design Principle

Board 8 must maintain **two separate concepts**:

1. Customer Entitlement

How many minutes the customer purchased or owns.

2. Operational Capacity Consumption

How much actual session capacity the booking consumes.

For example:

Customer purchases: 2:00 minutes

Operational uplift: +0:40

Customer balance deduction: 2:00

Session capacity deduction: 2:40

These values must never be treated as the same field.

This distinction is particularly important for the indoor-skydiving use case described in the matrix.

Board 8 Does NOT Duplicate

- **Board 1:** Event Master Configuration.
- **Board 2:** Standard event occurrence/showtime scheduling.
- **Board 3:** Venue/space master configuration.
- **Board 4:** Traditional seating and event capacity.
- **Board 5:** Registration and admission policies.
- **Board 6:** Staff/equipment resource allocation.
- **Board 7:** Event cancellation and rescheduling.
- **Pricing Module:** Actual pricing calculation.
- **CRM:** Customer master/profile.
- **Wallet/Entitlement Module:** Core customer entitlement ledger.
- **Board 9:** Live participant sequencing and session manifest operations.
- **Board 10:** Financial analytics and AI.

Board 8 — High-Definition Design Screens

The Board 8 visual must contain exactly these **10 distinct backend configuration screens**:

1. **Dynamic Activity Booking Command Center**
2. **Activity Session & Slot Template Configuration**
3. **Variable Duration & Dynamic Performance Configuration**
4. **First-Time vs Repeat Customer Booking Rules**
5. **Prepaid Minute Package & Customer Balance Configuration**
6. **Multi-Date Minute Allocation & Booking Rules**
7. **Peak, Off-Peak & Super Prime Time Configuration**
8. **Walk-In / There-and-Then Booking Configuration**
9. **Profile Minute Adjustment & Capacity Consumption Rules**
10. **Dynamic Booking Validation, Simulation & Audit**

High-Definition Design Requirements

The design must clearly demonstrate the actual backend functionality:

- **Screen 1:** Dynamic activity KPIs, slot status and configuration health.
- **Screen 2:** Visual 30-minute session/slot generator.
- **Screen 3:** 30/60/90-minute and 2/3/4-hour duration rules with automatic end-time calculation.
- **Screen 4:** Side-by-side First-Time vs Repeat/Professional rules.
- **Screen 5:** Minute-package configuration and balance breakdown.
- **Screen 6:** Visual allocation of purchased minutes across multiple dates.
- **Screen 7:** Weekly graphical **Off-Peak / Peak / Prime / Super Prime** editor.
- **Screen 8:** Operator-facing backend configuration for immediate/walk-in bookings.

- **Screen 9:** Must clearly show both **profile minute adjustment** and the separate **purchased duration → uplift → operational capacity consumed** calculation.
- **Screen 10:** Booking simulator; validation results, approvals, versioning and audit.

No screen should duplicate another board or another screen within Board 8.

Board 9 — Session Manifest, Participant Operations & Media Management

Matrix Coverage: 1.3.41–1.3.48, with operational dependencies to 1.3.32–1.3.40, 1.3.49 and 1.3.50.

Board Objective

Provide administrators and authorized operational teams with the backend configuration and control environment for managing participants from **arrival through session completion**.

Board 9 manages:

Participant → Arrival → Check-In → Waiver/Documents → Session Assignment → Manifest → Sequence → Operational Time → Dynamic Options → Completion → Media

For activities such as indoor skydiving, this is effectively the operational **session manifest engine**.

Screen 01 — Session Operations Command Center

- **Purpose:**
Provide the central operational view of current and upcoming activity sessions.
- **Backend Configuration & Operations**

Display:

- Current session.
- Upcoming sessions.
- Activity.
- Venue.
- Space/pod.
- Instructor/operator.
- Session start/end.
- Session duration.
- Participant count.
- Operational capacity.
- Capacity consumed.
- Remaining session time.
- Check-in status.
- Waiver status.
- Manifest readiness.

Show sessions as:

- Upcoming.
- Check-In Open.
- Boarding/Preparation.
- In Progress.
- Delayed.
- Completed.
- Closed.

Provide timeline such as:

- **14:00–14:30 — In Progress**
- **14:30–15:00 — Ready**
- **15:00–15:30 — Check-In Open**
- **15:30–16:00 — Upcoming**

Highlight:

- Missing participants.
- Missing waivers.
- Capacity conflicts.
- Unassigned participants.
- Late arrivals.
- Session over-allocation.

Acceptance Condition

- Authorized operational users can see current and upcoming sessions and immediately identify anything preventing a session from operating correctly.

Screen 02 — Participant Check-In Process Configuration

- **Purpose:**
Configure and operate the participant arrival/check-in workflow.

Backend Configuration

Configure check-in stages:

- **Expected**
- → **Arrived**
- → **Identity Confirmed**
- → **Waiver Verified**
- → **Briefing Required**
- → **Ready**
- → **Session Assigned**

Configure:

- Check-in opening time.
- Late-arrival tolerance.
- Walk-in check-in.
- Customer identification method.
- Booking lookup method.
- Ticket/booking validation.
- Waiver verification.
- Payment verification.
- Required-document verification.
- Participant category verification.
- Session confirmation.

Allow authorized operators to mark:

- Arrived.
- No Show.
- Late.
- Reassigned.
- Cancelled.
- Display process status visually for every participant.

Acceptance Condition

- A participant cannot be marked **Ready for Session** until all mandatory configured check-in prerequisites have been satisfied or formally overridden.

Screen 03 — Waiver & Participant Document Management

- **Purpose:**
Ensure required documents are linked to the participant/customer record and validated before participation.

Backend Configuration

Configure document types:

- Liability Waiver.
- Parental Consent.
- Medical Declaration.
- Safety Acknowledgement.
- Terms & Conditions.
- Membership Document.
- Identification.
- Training Certificate.
- Other activity-specific documents.

For each document configure:

- Mandatory/optional.
- Customer type.
- Activity.
- Product.
- Validity period.
- Expiry.
- Signature required.
- Guardian signature required.
- Renewal required.
- Version.
- Applicable venue.

Participant record displays:

Document	Status	Signed	Valid Until
Waiver	Valid	Yes	30 Jun
Safety Form	Valid	Yes	Session
Parental Consent	N/A	—	—

Statuses:

- Missing.
- Pending.
- Signed.
- Valid.
- Expired.
- Rejected.
- Link documents to the customer record so valid documents can be reused where policy permits.

Acceptance Condition

- The platform can determine whether every participant has valid mandatory documentation before allowing participation.

Screen 04 — Session Manifest Builder

- **Purpose:**
Build the operational list of participants assigned to each session.

Backend Configuration

Display session:

- **Indoor Skydiving — 14:00–14:30**

Manifest columns:

- Sequence.
- Participant.
- Customer type.
- Product/package.
- Purchased minutes.
- Operational consumption.
- Instructor.
- Check-in.
- Waiver.

- Readiness.
- Special options.

Allow operators to:

- Add participant.
- Remove participant.
- Move participant.
- Reassign from another session.
- Add walk-in.
- Assign instructor.
- Change participant category.
- Apply approved operational options.

Display session totals:

- **Session Duration:** 30:00
- **Allocated:** 25:40
- **Available:** 04:20

Acceptance Condition

- The manifest provides a single operational source of truth for every participant assigned to the session and the capacity each participant consumes.

Screen 05 — Participant Type & Mixed Session Configuration

- **Purpose:**
Configure whether sessions are dedicated to one participant type or contain a mixture of participant categories.

Backend Configuration

Configure session mode:

- **Professional Only**
Only professional/experienced participants allowed.
- **First-Time Only**
Only first-time participants allowed.
- **Mixed Session**
First-time and professional participants can share the session.

Configure:

- Allowed customer types.
- Maximum first-time participants.
- Maximum professional participants.
- Instructor ratio.
- Briefing requirement.
- Product restrictions.
- Experience-level restrictions.
- Operational uplift by participant type.

Example:

Participant Type	Purchased	Operational
Pro Flyer	2:00	2:00
First-Time Flyer	2:00	2:40

- Display total operational consumption dynamically.

Acceptance Condition

- The platform allows only participant combinations permitted by the configured session type while correctly calculating actual session capacity consumption.

Screen 06 — Flyer / Participant Sequence Manager

- **Purpose:**
Control the order in which participants perform within the session.

Backend Configuration

- Provide drag-and-drop sequence management.

Example:

- Pro Flyer A — 2 min
- First-Time Flyer B — 1 min + uplift

- First-Time Flyer C — 1 min + uplift
- Pro Flyer D — 3 min
- Repeat Flyer E — 2 min

Display:

- Sequence number.
- Participant.
- Package.
- Flight/activity duration.
- Operational duration.
- Instructor.
- Preparation status.

Allow:

- Drag to reorder.
- Move up/down.
- Lock sequence.
- Insert participant.
- Move participant to another session.
- Split purchased minutes into multiple turns where permitted.
- Provide sequence warnings where the order creates poor operational utilization.

Acceptance Condition

- Authorized operators can determine the operational participant sequence while the system continuously recalculates session timing and capacity.

Screen 07 — Session Balancing & Operational Time Optimizer**Purpose:**

Help operators organize participants efficiently so the complete session remains balanced and customers are not waiting unnecessarily.

Backend Configuration

- Display a graphical **30-minute session timeline**.

Example:

- 00:00 ————— 30:00
- Show participant blocks across the timeline.

Calculate:

- Customer flight/activity time.
- Entry time.
- Exit time.
- Operational uplift.
- Transition time.
- Remaining capacity.
- Session utilization.

Provide recommendations such as:

- Move Participant C before Participant B.
- Split professional flyer into two turns.
- Reduce idle transition period.
- Move participant to next session.
- Session exceeds operational capacity.

Allow:

- **Auto Optimize Sequence**
- with operator approval before applying changes.

Optimization objectives can include:

- Reduce customer waiting.
- Reduce transition time.
- Balance instructor workload.
- Maximize session utilization.
- Keep related participants together.

Acceptance Condition

- The system can recommend an optimized participant order while preserving purchased entitlements and operational safety/capacity rules.

Screen 08 — Dynamic Manifest Options & Repeat Flights

- **Purpose:**
Allow authorized operators to add operational options dynamically to participants already in the session manifest.

Backend Configuration

Configure manifest options such as:

- Repeat Flight.
- Hi-Fly.
- Additional Turn.
- Instructor Upgrade.
- Extended Activity.
- Coaching Add-On.
- Video Package.
- Photo Package.
- Other configurable operational option.

For each option configure:

- Applicable activity.
- Applicable product.
- Eligible participant type.
- Additional customer minutes.
- Additional operational consumption.
- Pricing reference.
- Instructor requirement.
- Approval requirement.
- Availability requirement.

Operator can select participant and choose:

- **+ Add Option**

Example:

- **Participant:** John Smith
Original: 2 × 1-minute flights
Add: Hi-Fly
Additional operational consumption: +00:30
- The manifest and capacity calculation update immediately.

Acceptance Condition

- Authorized operators can dynamically add eligible options without creating invalid session capacity or entitlement conditions.

Screen 09 — Participant Photo & Video Assignment

- **Purpose:**
Associate captured photos and videos with the correct participant/customer and session.

Backend Configuration

- Display media captured for the selected session.

Media types:

- Photo.
- Video.
- Highlight Clip.
- Action Camera.
- Instructor Camera.
- Other media.

Configure media association by:

- Participant.
- Booking.
- Session.
- Flight/activity turn.
- Media timestamp.
- Media reference ID.

Allow:

- Automatic matching.
- Manual assignment.
- Multi-participant media.
- Remove incorrect assignment.
- Mark media unavailable.
- Approve media.

- Mark for customer delivery.

Display:

- Participant → Session → Flight → Media

Example:

- John Smith
- → 14:00 Session
 - Flight 1
 - 4 Photos
 - 1 Video
- → Flight 2
 - 6 Photos
 - 1 Video
- Respect customer consent/privacy configuration.

Acceptance Condition

- Captured media can be accurately associated with the correct participant and activity instance with full traceability.

Screen 10 — Session Completion, Validation & Audit

- **Purpose:**
Close the operational session and validate that participant activity, time consumption and records are complete.

Backend Configuration**Display:**

- Session duration.
- Participants booked.
- Participants attended.
- No-shows.
- Purchased minutes.
- Actual participant minutes.
- Operational uplift.
- Total operational consumption.
- Unused session capacity.
- Additional options.
- Media assigned.
- Waivers completed.
- Session utilization.

Validate:

- Every participant checked in.
- Waiver/document status.
- Correct session assignment.
- Actual activity completed.
- Minute consumption.
- Operational uplift.
- Added options.
- Instructor assignment.
- Media association where applicable.

Support completion statuses:

- Completed.
- Partially Completed.
- Interrupted.
- Cancelled.
- Requires Review.

Provide actions:

- Validate Session.
- Complete Session.
- Reopen with Permission.
- Correct Manifest.
- Export Manifest.
- Export Session Report.
- View Participant History.
- View Version History.
- View Audit History.

Maintain immutable records of:

- Participant sequence changes.
- Check-in changes.
- Session reassignment.
- Minute adjustments.
- Operational uplift.
- Dynamic options.
- Operator overrides.
- Session completion.

Acceptance Condition

- A session can be formally closed only after required participant, entitlement and operational-consumption records have been validated or an authorized exception is recorded.

Board 9 Configuration Boundary

Board 9 owns:

WHO IS ACTUALLY PARTICIPATING AND IN WHAT ORDER

The operational flow is:

Upcoming Session

↓

Participant Arrives

↓

Check-In

↓

Waiver & Documents

↓

Session Manifest

↓

First-Time / Pro / Mixed Classification

↓

Sequence

↓

Operational Time Balancing

↓

Dynamic Options / Repeat Flights

↓

Photo & Video Association

↓

Session Completion

↓

Audit

Critical Relationship Between Board 8 and Board 9

These boards must remain separate.

Board 8 — Booking Engine

Answers:

What did the customer buy and when are they booked?

For example:

John purchased: 10 minutes

Booked today: 2 minutes

Remaining balance: 8 minutes

Board 9 — Session Operations

Answers:

How will those purchased minutes actually be operated inside the session?

For example:

Purchased activity: 2:00

Operational uplift: +0:40

Actual session capacity consumed: 2:40

Sequence position: #4

Instructor: Instructor A

Waiver: Valid

Status: Ready

This separation prevents commercial entitlement balances from being confused with live operational capacity.

Board 9 Does NOT Duplicate

- **Board 1:** Event Master Configuration.
- **Board 2:** Event schedule creation.
- **Board 3:** Venue and space configuration.
- **Board 4:** Traditional seating and event capacity.
- **Board 5:** Registration and admission-policy configuration.
- **Board 6:** Staff/resource planning.
- **Board 7:** Event cancellation/change workflows.
- **Board 8:** Minute purchasing, slot booking and pricing-period configuration.
- **CRM:** Customer master data.
- **Media Platform:** Actual media storage/transcoding.
- **Board 10:** Commercial reporting, operator performance, invoicing and analytics.

Board 9 — High-Definition Design Screens

The Board 9 design must contain exactly these **10 separate screens**:

1. **Session Operations Command Center**
2. **Participant Check-In Process Configuration**
3. **Waiver & Participant Document Management**
4. **Session Manifest Builder**
5. **Participant Type & Mixed Session Configuration**
6. **Flyer / Participant Sequence Manager**
7. **Session Balancing & Operational Time Optimizer**
8. **Dynamic Manifest Options & Repeat Flights**
9. **Participant Photo & Video Assignment**
10. **Session Completion, Validation & Audit**

High-Definition Design Requirements

The Board 9 visual must clearly look like **live operational backend software**, not another generic event dashboard.

- **Screen 1:** Current and upcoming session timeline with readiness.
- **Screen 2:** Process-driven **Arrived → Waiver → Briefing → Ready → Session** flow.
- **Screen 3:** Participant document/waiver status and validity.
- **Screen 4:** Actual session manifest showing participant, package, purchased minutes and operational consumption.
- **Screen 5:** First-Time / Pro / Mixed session configuration with different uplift calculations.
- **Screen 6:** Drag-and-drop participant sequence.
- **Screen 7:** Graphical **30-minute operational timeline** with participant blocks and an **Auto Optimize Sequence** function.
- **Screen 8:** Dynamic manifest options such as **Repeat Flight and Hi-Fly** with their capacity impact.
- **Screen 9:** Photo/video thumbnails mapped to participant → session → flight.
- **Screen 10:** Session totals, validation, completion and immutable audit.

All 10 screens must be visually distinct and must represent the specific functionality above—no duplicated dashboard layouts.

Board 10 — Commercial, Sponsorship, Analytics & AI Event Intelligence

Matrix Coverage: 1.3.23, 1.3.24, 1.3.27, 1.3.28, 1.3.31, 1.3.49–1.3.52, with dependencies to Finance, CRM, Pricing, Payments, Resource Management, Reporting/BI and the TICVAI AI services.

Board Objective

Provide administrators and management teams with the backend configuration environment for managing the **commercial and intelligence layer of events**, including:

- Event budgets.
- Revenue and cost tracking.
- Financial performance.
- Sponsorship agreements.
- Sponsor benefits and deliverables.
- Event dashboards.
- Check-in and attendance intelligence.
- AI-assisted event creation.
- Operator and instructor performance.
- Automated invoicing.
- Participant activity statistics.
- Event profitability and performance analytics.

The overall configuration model is:

Event → Budget → Revenue & Cost → Sponsorship → Operational KPIs → AI Intelligence → Operator Performance → Invoicing → Participant Analytics → Executive Performance

Screen 01 — Event Commercial & Intelligence Command Center

Purpose

- Provide management with a consolidated backend view of the financial, commercial, sponsorship, attendance and operational performance of events.

Backend Configuration

Display configurable KPI cards such as:

- Total Events.

- Events On Sale.
- Events Completed.
- Tickets/Registrations Sold.
- Gross Revenue.
- Net Revenue.
- Event Costs.
- Sponsorship Revenue.
- Event Profit.
- Margin %.
- Attendance.
- Check-In Rate.
- Capacity Utilization.
- Revenue per Attendee.
- Revenue per Session.
- Operator Utilization.

Provide filters by:

- Tenant.
- Legal entity.
- Region.
- Venue.
- Event.
- Event type.
- Organizer.
- Date range.
- Event status.
- Currency.

Provide configurable widgets for:

- Revenue trend.
- Cost trend.
- Profitability.
- Attendance.
- Capacity utilization.
- Sponsorship.
- Operator performance.
- Participant activity.
- Allow administrators to configure which KPIs are visible by role.

Acceptance Condition

- Authorized users can obtain a consolidated view of event commercial and operational performance while data visibility remains controlled by tenant, entity and role permissions.

Screen 02 — Event Budget & Financial Plan Configuration

Purpose

- Configure the financial plan and budget against which event performance will be measured.

Backend Configuration

Create budget categories including:

- **Revenue**
 - Ticket Sales.
 - Registration Fees.
 - Sponsorship.
 - F&B.
 - Retail.
 - Add-Ons.
 - Media.
 - Activity Revenue.
 - Other Revenue.
- **Costs**
 - Venue.
 - Staff.
 - Contractors.
 - Security.
 - Production.
 - Equipment.

- Marketing.
- Entertainment.
- Technology.
- Insurance.
- Transportation.
- Hospitality.
- Other Costs.

For each budget line configure:

- Budget category.
- Cost/revenue center.
- Planned amount.
- Currency.
- Responsible owner.
- Supplier/sponsor reference.
- Effective period.
- Notes.

Display:

- **Budget → Committed → Actual → Forecast → Variance**

Example:

Category	Budget	Actual	Variance
Ticket Revenue	AED 500K	AED 545K	+45K
Sponsorship	AED 150K	AED 140K	-10K
Production	AED 100K	AED 92K	+8K
Staffing	AED 75K	AED 81K	-6K

- Configure warning thresholds for budget variance.

Acceptance Condition

- Administrators can create an event-level financial plan and compare budget, commitments, actuals and forecasts using data referenced from the shared Finance services.

Screen 03 — Event Revenue, Cost & Profitability Configuration

Purpose

- Define how financial performance should be measured and attributed to an event.

Backend Configuration

Configure revenue attribution from:

- Ticketing.
- Registration.
- Add-ons.
- Activity bookings.
- Sponsorship.
- F&B.
- Retail.
- Media.
- Other services.

Configure cost attribution from:

- Staff.
- Contractors.
- Equipment.
- Venue.
- Marketing.
- Production.
- Payment fees.
- Third-party fees.
- Other event costs.

Display profitability hierarchy:

- **Gross Revenue**
- – **Refunds**
- – **Discounts**

- – **Taxes/Fees where applicable**
- = **Net Revenue**
- – **Direct Costs**
- = **Contribution**
- – **Allocated Event Costs**
- = **Event Profit**

Calculate:

- Profit.
- Margin %.
- Revenue per attendee.
- Cost per attendee.
- Revenue per available capacity.
- Revenue per session.
- Break-even attendance.
- Break-even revenue.

Acceptance Condition

- The system provides traceable event profitability using configured financial attribution rules without duplicating the underlying accounting ledger.

Screen 04 — Sponsorship & Commercial Agreement Configuration

Purpose

- Manage sponsors and sponsorship agreements associated with events.

Backend Configuration

Configure:

- Sponsor.
- Agreement reference.
- Event.
- Sponsorship level.
- Contract value.
- Currency.
- Agreement start/end.
- Payment schedule.
- Sponsor contact.
- Account owner.
- Agreement status.

Sponsorship levels may include:

- Title Sponsor.
- Main Sponsor.
- Gold.
- Silver.
- Bronze.
- Official Partner.
- Supporting Partner.
- Custom.

Configure sponsor benefits such as:

- Branding.
- Tickets.
- VIP allocations.
- Hospitality.
- Advertising.
- Digital exposure.
- Venue signage.
- Booth/exhibition space.
- Media placement.
- Promotional rights.
- Customer engagement.
- Other contractual benefits.

Track:

- **Contracted → Scheduled → Delivered → Verified**
- Display sponsorship value versus delivered benefits.

Acceptance Condition

- Administrators can associate sponsorship agreements and deliverables with an event and track fulfillment against contractual commitments.

Screen 05 — Event Dashboard & Check-In Analytics Configuration

Purpose

- Configure dashboards used to measure event sales, attendance and check-in performance.

Backend Configuration

Configure dashboard metrics:

- Tickets sold.
- Registrations.
- Expected attendance.
- Checked in.
- Not checked in.
- No-shows.
- Late arrivals.
- Attendance %.
- Capacity utilization.
- Gate throughput.
- Check-ins per minute.
- Check-ins by gate.
- Check-ins by ticket type.
- Check-ins by session.
- Check-ins by customer category.

Provide visual:

- **Expected → Arrived → Checked-In → Admitted → No Show**

Configure dashboard refresh:

- Real time.
- Every X minutes.
- Manual.

Configure alerts such as:

- Check-in below expected.
- Gate congestion.
- High no-show rate.
- Session capacity approaching threshold.
- Unexpected attendance pattern.
- Allow administrators to define dashboard visibility by operational role.

Acceptance Condition

- Authorized users can monitor configured sales and attendance KPIs with current check-in information supplied by shared Ticketing and Access Control services.

Screen 06 — AI-Assisted Event Creation & Configuration

Purpose

- Allow authorized administrators to use AI to accelerate creation of event configuration from natural-language instructions or existing templates.

Backend Configuration

- Provide an AI Event Configuration Assistant.

Example administrator instruction:

- “Create a three-day family festival at Venue A from 4–6 December, operating from 4 PM to 11 PM, using the outdoor area and workshop hall, with 5,000 daily capacity.”

AI can propose:

- Event type.
- Event metadata.
- Dates.
- Sessions.
- Venue/spaces.
- Capacity profile.
- Registration model.
- Resource requirements.

- Communication plan.
- Budget categories.
- Operational checklist.

Display:

- **AI Proposal**

alongside:

- **Existing / Approved Configuration**

Administrators can:

- Accept field.
- Reject field.
- Edit field.
- Accept selected recommendations.
- Regenerate recommendation.
- Explain recommendation.

Configure AI permissions:

- Suggest only.
- Create draft.
- Never publish automatically.
- Approval mandatory.
- Restricted configuration areas.

Critical Governance Principle

- **AI may propose configuration, but must not autonomously publish or execute high-impact event configuration.**

Acceptance Condition

- AI can accelerate event setup while every proposed configuration remains reviewable, editable, permission-controlled and subject to normal approval workflows.

Screen 07 — Operator & Instructor KPI Configuration**Purpose**

- Configure measurable operational KPIs for staff, instructors and activity operators.

Backend Configuration

Define KPIs such as:

- Sessions operated.
- Participants handled.
- Activity minutes delivered.
- Paid minutes.
- Actual operational minutes.
- Session utilization.
- Average transition time.
- On-time session start %.
- Customer throughput.
- Upsell value.
- Repeat-flight sales.
- Hi-Fly sales.
- Add-on sales.
- Customer satisfaction reference.
- Safety/compliance completion.

Configure KPI by:

- Operator.
- Instructor.
- Role.
- Venue.
- Activity.
- Session.
- Date range.

Set:

- Target.
- Minimum threshold.
- Warning threshold.
- Weight.
- Performance period.

Display:

- **Target vs Actual**
- and trend history.

Acceptance Condition

- Administrators can define measurable operator/instructor KPIs and calculate performance using traceable operational records from completed sessions.

Screen 08 — Automated Event Invoicing Configuration

Purpose

- Configure automatic invoice generation for eligible event-related customers and commercial accounts.

Backend Configuration

Configure invoice triggers:

- Event completed.
- Session completed.
- Corporate booking completed.
- Sponsorship milestone reached.
- Contract milestone reached.
- Monthly billing cycle.
- Usage threshold reached.

Configure invoice recipients:

- Corporate customer.
- Sponsor.
- Reseller.
- Partner.
- Event organizer.
- Other contracted entity.

Configure:

- Billing profile.
- Legal entity.
- Currency.
- Tax profile.
- Payment terms.
- Invoice template.
- Purchase-order requirement.
- Cost center.
- Reference fields.
- Consolidated vs individual invoice.

Workflow:

- **Trigger**
- → **Calculate Billable Items**
- → **Validate**
- → **Generate Invoice**
- → **Finance Approval if Required**
- → **Issue**
- → **Track Payment**
- Allow exception handling for failed invoice generation.

Important Boundary

- Event Management defines **when and why the invoice should be created**.
- The actual accounting invoice, receivable and ledger posting remain governed by the shared **Finance module**.

Acceptance Condition

- Eligible event transactions can trigger automated invoice requests with complete event and customer references while financial posting remains controlled by Finance.

Screen 09 — Participant Activity & Flight Analytics

Purpose

- Provide detailed analytics for individual participant activity, especially for minute-based and flight/activity businesses.

Backend Configuration

For each participant display:

- Customer.
- Activity.
- Sessions attended.
- Total bookings.
- Purchased minutes.
- Consumed minutes.
- Remaining minutes.
- Number of flights/turns.
- Average flight duration.
- First-time/repeat/pro classification.
- Hi-Fly count.
- Repeat-flight count.
- Instructor history.
- Venue history.
- Activity history.
- Media associated.

Support analysis by:

- Customer.
- Activity.
- Venue.
- Date range.
- Product.
- Instructor.
- Customer type.

Example participant profile:

- **John Smith**
- Total Sessions: **12**
- Total Flights: **28**
- Purchased Minutes: **60**
- Consumed Minutes: **42**
- Remaining Minutes: **18**
- Hi-Fly: **6**
- Repeat Flights: **8**
- Provide trend views for participant engagement and repeat activity.

Acceptance Condition

- Authorized users can access accurate participant activity statistics derived from booking and completed-session records while respecting CRM/data-access permissions.

Screen 10 — Executive Analytics, AI Insights & Audit

Purpose

- Provide management with consolidated event intelligence, AI-generated insights and governed analytical reporting.

Backend Configuration

Display executive KPIs:

- Gross Revenue.
- Net Revenue.
- Total Costs.
- Profit.
- Margin %.
- Sponsorship Revenue.
- Attendance.
- Capacity Utilization.
- No-Show Rate.
- Revenue per Attendee.
- Revenue per Session.
- Operator Productivity.
- Activity Utilization.
- Repeat Customer Rate.

Provide configurable comparisons:

- Event vs Event.
- Venue vs Venue.

- Current vs Previous Period.
- Budget vs Actual.
- Forecast vs Actual.
- Event Type vs Event Type.

AI Insights

AI may surface observations such as:

- “Saturday 17:00–20:00 sessions consistently exceed 90% utilization.”
- “First-time participant demand is strongest during weekend Prime periods.”
- “Event operating costs are 8% above budget.”
- “Increasing Friday evening capacity may improve projected revenue.”
- “No-show rate for this event is above comparable events.”

AI can recommend:

- Capacity adjustment.
- Schedule optimization.
- Resource adjustment.
- Pricing review.
- Marketing action.
- Sponsorship opportunity.
- Operational improvement.

Each recommendation should show:

- Supporting metric.
- Confidence/strength where supported.
- Expected impact.
- Affected configuration.
- Recommended action.

Governance

AI recommendations must never automatically modify:

- Pricing.
- Capacity.
- Event dates.
- Financial records.
- Customer entitlements.
- Resource assignments.
- without an authorized user action and applicable approval.

Provide:

- Export Executive Report.
- Save Dashboard View.
- Schedule Report.
- Compare Events.
- View AI Insight History.
- View Data Source.
- View Version History.
- View Audit History.

Maintain audit history for:

- Dashboard configuration.
- KPI definitions.
- AI recommendations accepted/rejected.
- Sponsorship changes.
- Budget changes.
- Invoice-trigger configuration.
- Manual analytical adjustments.

Acceptance Condition

- Management receives traceable event intelligence and AI-assisted recommendations while all resulting operational or commercial actions remain governed by TICVAI permissions and approval controls.

Board 10 Configuration Boundary

Board 10 owns:

HOW EVENT PERFORMANCE IS MEASURED, COMMERCIALIZED AND OPTIMIZED

The configuration flow is:

Event

↓
Budget
 ↓
Revenue & Costs
 ↓
Sponsorship
 ↓
Attendance / Check-In Intelligence
 ↓
AI-Assisted Configuration
 ↓
Operator KPIs
 ↓
Automated Invoicing
 ↓
Participant Analytics
 ↓
Executive Analytics & AI Insights

Relationship With Other TICVAI Modules

Board 10 should act as an **orchestration and intelligence layer**, not recreate functionality already owned elsewhere.

Finance Module

Owns:

- General ledger.
- Accounts receivable.
- Tax accounting.
- Invoice accounting.
- Payment reconciliation.
- Financial posting.

Board 10 consumes Finance data and initiates governed event-related financial processes.

CRM Module

Owns:

- Customer master.
- Customer segmentation.
- Customer engagement history.

Board 10 consumes permitted customer and participant information for event analytics.

Resource Management

Owns:

- Resource master.
- Staff availability.
- Equipment master.
- Qualifications.

Board 10 consumes operational records for KPI measurement.

Pricing Module

Owns:

- Price rules.
- Dynamic pricing.
- Price calculation.

Board 10 analyzes pricing performance but does not recreate the pricing engine.

Access Control

Owns:

- Credential validation.
- Gate operations.
- Admission transactions.

Board 10 consumes check-in/admission data for attendance analytics.

Board 10 Does NOT Duplicate

- **Board 1:** Event master setup.
- **Board 2:** Scheduling.
- **Board 3:** Venue and space configuration.
- **Board 4:** Seating and capacity configuration.
- **Board 5:** Registration and admission policies.
- **Board 6:** Resource allocation.
- **Board 7:** Event changes/cancellations.
- **Board 8:** Minute/time-slot booking rules.
- **Board 9:** Live session manifest and participant operations.
- **Finance:** Accounting and ledger processing.
- **CRM:** Customer master.
- **Pricing:** Pricing-rule calculation.
- **Reporting/BI:** Shared enterprise reporting infrastructure.

Board 10 — High-Definition Design Screens

The Board 10 visual must contain exactly these **10 separate backend configuration screens**:

1. **Event Commercial & Intelligence Command Center**
2. **Event Budget & Financial Plan Configuration**
3. **Event Revenue, Cost & Profitability Configuration**
4. **Sponsorship & Commercial Agreement Configuration**
5. **Event Dashboard & Check-In Analytics Configuration**
6. **AI-Assisted Event Creation & Configuration**
7. **Operator & Instructor KPI Configuration**
8. **Automated Event Invoicing Configuration**
9. **Participant Activity & Flight Analytics**
10. **Executive Analytics, AI Insights & Audit**

High-Definition Design Requirements

The Board 10 design must again contain **10 genuinely different screens**, not ten dashboard variations.

- **Screen 1:** Executive event command center combining commercial and operational KPIs.
- **Screen 2:** Detailed Budget → Committed → Actual → Forecast → Variance configuration.
- **Screen 3:** Revenue/cost attribution and event-profitability waterfall.
- **Screen 4:** Sponsor agreement, sponsorship level, benefits and fulfillment tracking.
- **Screen 5:** Real-time **Expected → Arrived → Checked-In → Admitted → No Show** analytics and configurable alerts.
- **Screen 6:** A prominent **AI Event Configuration Assistant** with natural-language input and Accept / Reject / Edit controls for each AI proposal.
- **Screen 7:** Operator/instructor KPI definitions, targets and performance measurement.
- **Screen 8:** Visual automated-invoicing workflow from trigger through Finance issuance.
- **Screen 9:** Participant profile analytics including flights, purchased/consumed/remaining minutes and activity history.
- **Screen 10:** Executive performance dashboard with AI insights, recommendations, comparisons and audit controls.

Every screen must remain clearly identifiable as TICVAI backend configuration/management software and must not duplicate another Event Management board.
