Document Purpose & Use

Purpose. This document translates the supplied Ticket Types requirement matrix into twelve implementation boards. Each board contains one high-definition visual reference and a detailed Scope of Work for ten backend configuration screens.

Design intent. The visuals communicate information architecture, hierarchy and expected configuration coverage. SoftLab shall develop production-ready responsive interfaces and may refine interaction details while preserving the approved business scope, shared architecture and TICVAI design system.

Delivery interpretation. A screen is not complete when only the visible mockup is reproduced. Delivery includes the described rules, validations, permissions, integrations, states, audit evidence and exception handling.

Architectural recommendation: one Ticket Product Engine

The Ticket Product defines what is sold. It must reference shared engines for pricing, promotion, capacity, media, access control, finance/tax, reservation, membership, wallet, CRM, analytics and AI. Those engines remain authoritative; the Ticket Product Engine must not recreate them as embedded parallel subsystems.

Platform-Wide Architectural Requirements

- One connected platform: reuse shared Pricing, Promotion, Inventory, Reservation, Media, Access Control, Membership, Wallet, CRM, Payment, Finance, Notification, Approval, Audit and AI services.
- Multi-tenancy: support tenant, brand, venue, region, legal entity, language, currency, timezone and channel context with strict data isolation.
- Security: enforce SSO/MFA and RBAC/PBAC, including field masking, delegated/temporary access, segregation of duties and governed emergency override.
- Governance: high-impact changes support draft, validation, review, approval, publication, versioning, corrective rollback and immutable history.
- AI governance: AI output is explainable, confidence-scored, evidence-linked, reviewable and subordinate to product, capacity, pricing, finance and access policies.
- Integration: expose secured versioned APIs and events with idempotency, retry, monitoring, correlation IDs and error reconciliation.
- Usability and accessibility: use consistent TICVAI navigation, keyboard support, accessible contrast and WCAG 2.2 AA-aligned components.
- Operational quality: grids include search, filter, sort, pagination, saved views and controlled export; flows include empty, loading, warning, error and recovery states.
- Auditability: record actor, timestamp, context, before/after value, reason, approval, AI model/version and correlation ID where applicable.

Responsibility Boundaries

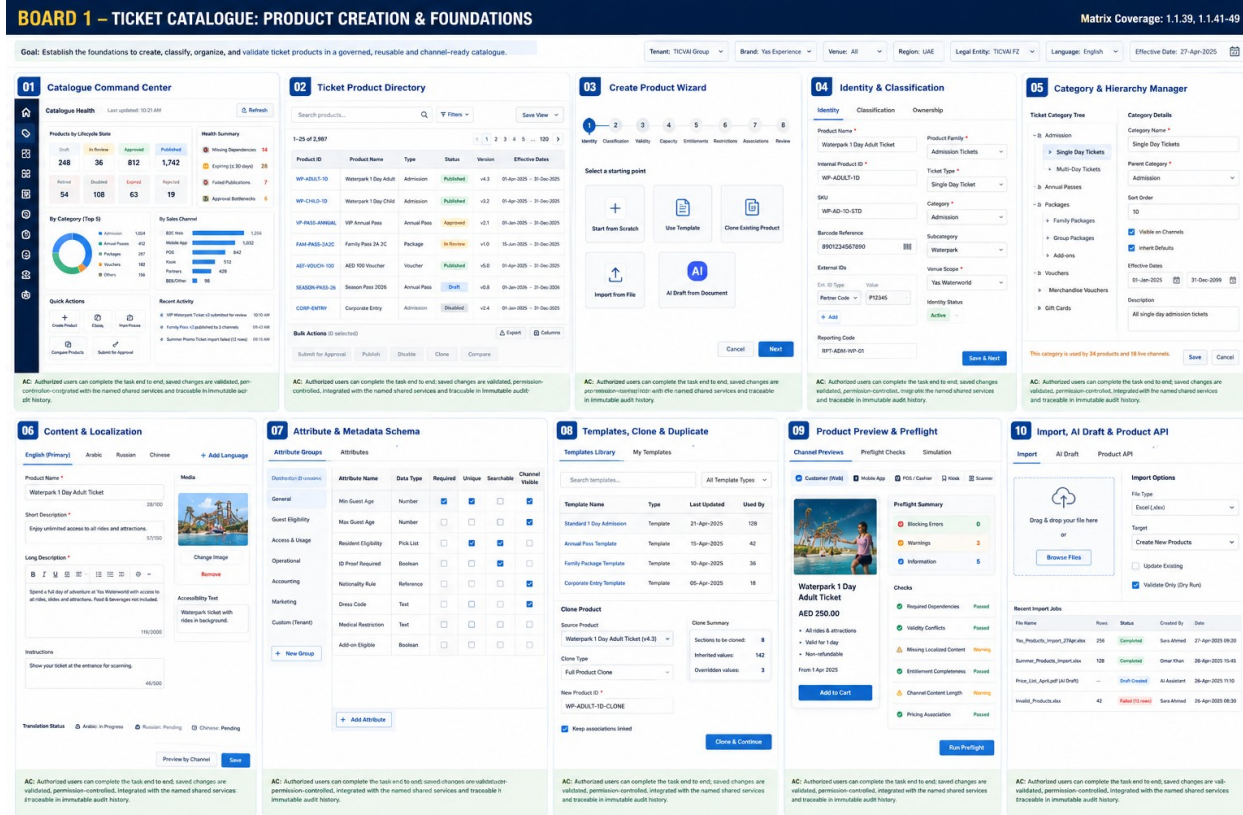

Ticket Product Engine owns	Linked shared engines own
Product identity, type, variants and content	Price calculation, discount and promotion logic

Ticket Product Engine owns	Linked shared engines own
Validity and product-level usage rules	Capacity inventory, reservation and waitlist transactions
Entitlement composition and access-right references	Credential templates, encoding, keys and access validation
Eligibility, relationships and service-policy references	Tax, accounting, payment, settlement and ledger entries
Lifecycle, approval, versions and product audit	Membership, wallet, loyalty, CRM, communication and analytics records

Board Directory & Matrix Traceability

Source note. The supplied extract contains 122 Ticket Types rows. It jumps from requirement 1.1.64 to 1.1.78; no requirements were supplied for identifiers 1.1.65-1.1.77, so this document does not invent them.

Board	Configuration area	Matrix coverage
1	Product Catalogue & Ticket Creation	1.1.39, 1.1.41-49
2	Ticket Types, Variants & Properties	1.1.1-8, 1.1.12-13, 1.1.26, 1.1.42-46
3	Validity & Usage Rules	1.1.9, 1.1.78-92
4	Scheduling, Timeslots & Performance Association	1.1.2-4, 1.1.19, 1.1.24-25, 1.1.85-86
5	Capacity & Inventory Association	1.1.10, 1.1.25, 1.1.32, 1.1.117, 1.1.127
6	Entitlements & Access Rights	1.1.11, 1.1.50-64
7	Eligibility, Restrictions & Guest Rules	1.1.38, 1.1.121-127
8	Group, Family, Corporate & Special Ticket Products	1.1.5-7, 1.1.28-31, 1.1.93-120
9	Bundles, Add-ons, Donations & Product Relationships	1.1.8, 1.1.17-18, 1.1.34-35, 1.1.43, 1.1.128-135
10	Upgrade, Exchange, Transfer & Modification Rules	1.1.19-23, 1.1.27, 1.1.96-100, 1.1.113
11	Media, Pricing, Promotion & Channel Associations	1.1.15-16, 1.1.37, 1.1.39 plus related Ticket Media requirements
12	Product Lifecycle, Workflow, Versioning, AI & Audit	1.1.14, 1.1.33-41, 1.1.47-49, 1.1.104, 1.1.135

Board 1 - Scope of Work

Matrix coverage: 1.1.39, 1.1.41-49

Screen 01 - Catalogue Command Center

- **Purpose:** Provide an operational overview of all ticket products and catalogue health.
 - Show product counts by lifecycle state, category, venue, channel and product family.
 - Surface missing dependencies, expiring configurations, failed publications and approval bottlenecks.
 - Support tenant, brand, venue, region, legal entity, language and effective-date context.
 - Provide governed quick actions for create, clone, import, compare and submit for approval.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Ticket Product Directory

- **Purpose:** Find and manage unlimited ticket products from a controlled catalogue.
 - Search and filter by product ID, name, category, type, status, venue, channel and validity model.
 - Display current version, effective dates, owner, approval status and dependency health.
 - Support saved views, pagination, controlled export and permitted bulk actions.
 - Prevent deletion of products with sales history; allow disablement while preserving sold-ticket validity.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Create Product Wizard

- **Purpose:** Create a complete ticket product through a guided, recoverable workflow.
 - Start from scratch, a reusable template, an existing product, an approved import or an AI draft.
 - Guide the user through identity, type, validity, capacity, entitlements, restrictions and associations.
 - Save incomplete work as a draft and retain progress, ownership and change history.
 - Run step-level and final validation before review or publication is allowed.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Identity & Classification

- **Purpose:** Maintain the canonical identity and classification of a sellable product.
 - Configure product name, internal ID, SKU, barcode reference, external IDs and reporting code.
 - Assign product family, ticket type, category, subcategory, venue scope and responsible owner.
 - Enforce uniqueness and naming rules within the applicable tenant and brand context.
 - Separate stable product identity from versioned commercial and operational configuration.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Category & Hierarchy Manager

- **Purpose:** Organize ticket products in reusable hierarchies without creating duplicate engines.
 - Create unlimited categories and parent-child structures for admission, passes, packages and vouchers.
 - Configure sort order, visibility, inheritance, effective dates and category-level defaults.
 - Show downstream use by channels, reports, promotions, access rules and integrations.
 - Protect categories that are referenced by live products or historical transactions.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Content & Localization

- **Purpose:** Configure channel-ready product content in all supported languages.
 - Maintain names, short and long descriptions, instructions, terms, images and accessibility text.
 - Support language variants, approved glossary terms, fallback language and translation status.
 - Preview truncation and mandatory content by web, mobile, POS, kiosk and partner channel.
 - Version content independently while retaining a traceable relationship to the product version.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Attribute & Metadata Schema

- **Purpose:** Define structured attributes that describe and drive ticket behavior.
 - Configure text, number, date, Boolean, pick-list and reference attributes with validation rules.
 - Mark fields as required, unique, searchable, reportable, sensitive or channel-visible.
 - Group attributes by product family and permit controlled tenant-level extensions.
 - Expose approved metadata consistently through APIs, exports, rules and downstream services.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Templates, Clone & Duplicate

- **Purpose:** Accelerate setup through governed reuse of proven product configurations.
 - Create reusable templates containing references to pricing, validity, capacity, access and approvals.
 - Clone full products or selected configuration areas and choose whether associations remain linked.
 - Require new identifiers and highlight inherited versus overridden values.
 - Record source product, source version, cloning user and subsequent differences for audit.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Product Preview & Preflight

- **Purpose:** Validate the complete product before it reaches a sales or access channel.
 - Preview customer, cashier, kiosk, partner and scanner interpretations of the product.
 - Check required dependencies, date conflicts, invalid combinations and missing localized content.
 - Distinguish blocking errors from warnings and require reasoned override where permitted.
 - Simulate representative guest, date, venue, channel and quantity scenarios.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 10 - Import, AI Draft & Product API

- **Purpose:** Create and maintain products safely through bulk files, documents and integrations.
 - Import spreadsheets and approved structured files with mapping, dry-run, row validation and rollback.
 - Use AI to interpret approved PDFs, brochures and price lists and produce reviewable configuration drafts.
 - Expose versioned APIs for create, retrieve, update, validate, clone and lifecycle operations.
 - Apply authentication, authorization, idempotency, correlation IDs, retry and error reconciliation.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

TICVAI • Backend Configuration Scope of Work | 9

Board 2 - Scope of Work

Matrix coverage: 1.1.1-8, 1.1.12-13, 1.1.26, 1.1.42-46

Screen 01 - Ticket Type Library

- **Purpose:** Manage the supported behavioral ticket types from one controlled library.
 - Provide approved base types for open-dated, dated, special-day, timeslot, multi-day, pass, camp, voucher and add-on products.
 - Show which capability blocks each type requires and which combinations are incompatible.
 - Allow tenant templates without permitting uncontrolled code-level type proliferation.
 - Track usage, version, owner, status and affected products for every type definition.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Open-Dated Ticket Setup

- **Purpose:** Configure tickets that can be used on an eligible date without advance date selection.
 - Define eligible venues, attractions, first and last permitted use dates and blackout rules.
 - Configure whether reservation is optional, required later or never required.
 - Link admission capacity, access entitlements and conversion rules by date of use.
 - Preview behavior at sale, reservation, wallet delivery and first validation.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Dated & Special-Day Setup

- **Purpose:** Configure guest-selected dated tickets and fixed designated-day products.
 - Choose guest-selected date or administrator-fixed special date behavior.
 - Define sale windows, date-change eligibility, capacity source and same-day restrictions.
 - Support event, attraction, venue and multi-venue associations for the selected date.
 - Block publication when the date falls outside linked schedule or operational availability.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Timeslot Ticket Type

- **Purpose:** Define the product-level behavior of time-based admission tickets.
 - Reference approved schedule and timeslot templates instead of duplicating schedule configuration.
 - Specify exact entry time or entry-window behavior and whether early/late access is allowed.
 - Configure reservation, waitlist, transfer and reschedule eligibility for this type.
 - Show the final ticket behavior across booking, delivery and validation touchpoints.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Multi-Day & Consecutive Use

- **Purpose:** Configure products valid across a defined number or pattern of visit days.
 - Define total visit days, consecutive or non-consecutive use and start-date requirements.
 - Set first-entry activation, last-use deadline, skipped-day policy and remaining-day visibility.
 - Control whether different attractions or venues may be used on each day.
 - Validate the product against capacity, entitlement and access-control constraints.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Pass, Membership & Subscription Type

- **Purpose:** Classify recurring and duration-based products before specialized lifecycle configuration.
 - Select monthly, annual, season, renewable subscription or custom-duration behavior.
 - Reference the shared Membership and Subscription engines for billing and member lifecycle.
 - Define whether the product is named, transferable, renewable or eligible for auto-renewal.
 - Prevent conflicting validity or ownership rules between product and membership records.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Camp & Recurring-Day Pattern

- **Purpose:** Configure attendance on selected weekdays across a defined number of weeks.
 - Select allowed weekdays, number of weeks, start rules and skipped-session treatment.
 - Reference session schedules, capacity pools and attendance/check-in rules.
 - Define make-up, transfer, cancellation and absence policy associations.
 - Preview the generated occurrence pattern before activation.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Variant Dimensions

- **Purpose:** Create controlled variants such as admission tier, guest category and service level.
 - Define dimensions including adult, child, senior, resident, standard, premium and VIP.
 - Set permitted values, display labels, sort order, default value and applicable product families.
 - Mark dimensions that affect pricing, eligibility, entitlements, capacity or reporting.
 - Retire variant values safely without changing already-sold tickets.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Property Combination Matrix

- **Purpose:** Generate and govern valid combinations of multiple ticket properties.
 - Create combinations such as VIP Child or Resident Adult from approved dimensions.
 - Enable, disable or exclude combinations and provide reason and effective dates.
 - Assign unique SKU, external reference and channel label to sellable combinations.
 - Detect duplicate, contradictory or commercially incomplete combinations before publish.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 10 - Ownership & Assignment Model

- **Purpose:** Define whether tickets are anonymous, named or assigned later.
 - Configure purchaser, holder, attendee and beneficiary roles and mandatory identity fields.
 - Support anonymous, fully named and partially assigned group products.
 - Define assignment deadlines, reassignment rules, identity verification and privacy handling.
 - Expose ownership status consistently to CRM, wallet, access control and service flows.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

TICVAI • Backend Configuration Scope of Work | 12

Board 3 - Scope of Work

Matrix coverage: 1.1.9, 1.1.78-92

Screen 01 - Validity Rule Library

- **Purpose:** Maintain reusable, versioned validity policies for ticket products and entitlements.
 - List rule name, model, status, effective dates, owner, usage count and affected products.
 - Support tenant, venue, attraction, product family and channel scope.
 - Clone, compare, retire and replace policies without rewriting historical ticket rights.
 - Require impact assessment when a live product references the policy.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Fixed & Variable Period

- **Purpose:** Configure fixed calendar periods and variable duration calculated from a trigger.
 - Define fixed start/end timestamps or duration in hours, days, weeks, months or years.
 - Choose trigger such as sale, issue, reservation, first use, activation or manual assignment.
 - Set timezone, inclusivity of end time and treatment of daylight-saving changes.
 - Display example calculations and reject ambiguous or negative periods.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Date & Time Range

- **Purpose:** Control the dates and daily time windows during which a ticket may be used.
 - Configure inclusive date ranges, intraday windows and overnight windows.
 - Apply different windows by venue, attraction, access area or entitlement.
 - Support grace periods and early/late validation outcomes without changing the base right.
 - Identify conflicts with schedules, performance times and sales availability.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Weekday & Calendar Rules

- **Purpose:** Limit usage through weekdays, calendars, holidays and exception dates.
 - Select permitted and excluded weekdays and reference regional holiday calendars.
 - Create inclusion and exclusion dates with reason, priority and effective version.
 - Resolve overlapping calendar rules through visible precedence logic.
 - Preview eligible dates for a chosen period, venue and guest context.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - First-Use Activation

- **Purpose:** Start ticket validity when the ticket is first successfully used.
 - Define which validation event activates the ticket and how failed scans are treated.
 - Configure activation deadline, duration after activation and last-use boundary.
 - Support manual activation or correction with approval and immutable audit evidence.
 - Synchronize activation for offline validation and reconcile duplicate events.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Performance-Based Validity

- **Purpose:** Bind use rights to one or more scheduled performances or sessions.
 - Reference performance ID, date/time, venue, seat area and operational status.
 - Configure single-performance, selected-performance or any-performance entitlement.
 - Define behavior when a performance is rescheduled, cancelled or replaced.
 - Prevent publication when the linked performance is inactive or inconsistent.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Number-of-Days Validity

- **Purpose:** Define how many eligible visit days may be consumed within a wider window.
 - Set total days, consecutive or flexible use, and whether partial-day use consumes a day.
 - Define start-date selection, first-use activation and final-use deadline.
 - Show remaining days and permitted next-use dates to guests and staff.
 - Handle refunds, reversals and corrected access events without double consumption.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Monthly & Annual Validity

- **Purpose:** Configure month, year and anniversary-based expiry behavior.
 - Support calendar month/year, rolling month/year and custom anniversary periods.
 - Define end-of-month and end-of-year expiry with leap-year handling.
 - Configure renewal overlap, grace period and early renewal treatment.
 - Preview expiry results for representative purchase and activation dates.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Dynamic Expiry Calculation

- **Purpose:** Calculate expiry from approved rules and contextual inputs.
 - Use sale date, first use, performance, membership term, entitlement or external event as inputs.
 - Support conditional formulas with explicit precedence and safe fallback behavior.
 - Expose calculation explanation, input values and resulting timestamp.
 - Version calculation logic so historical tickets retain their issued rights.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

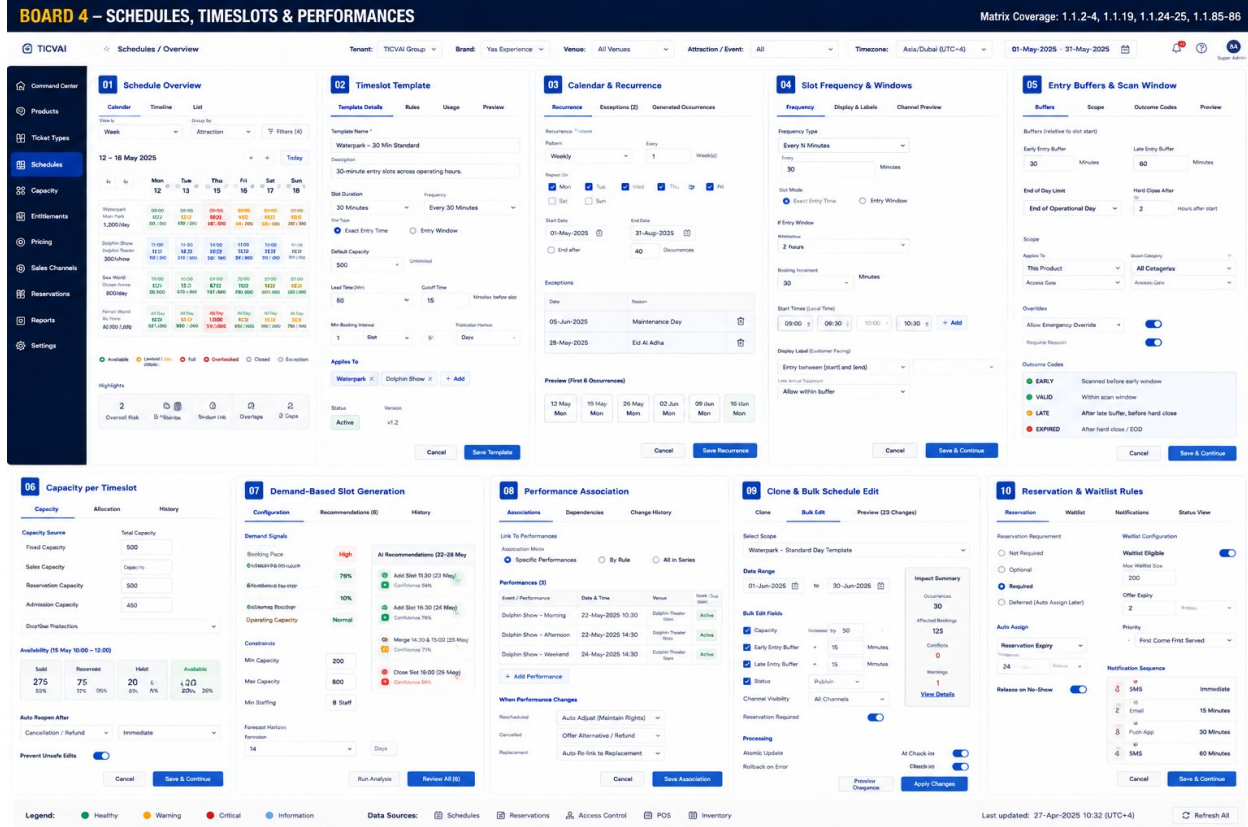

Screen 10 - Blackouts, Grace & Exceptions

- **Purpose:** Govern temporary exceptions to otherwise valid usage rules.
 - Configure blackout dates, peak restrictions, closure periods and controlled grace windows.
 - Define whether exceptions block use, require fee, require reservation or require approval.
 - Allow authorized ticket-level exception with reason, evidence and expiry.
 - Provide rule simulation and access-control outcome before an exception is published.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Board 4 - Scheduling, Timeslots & Performance Association

Figure 4. High-definition configuration board containing all 10 screens.

Board 4 - Scope of Work

Matrix coverage: 1.1.2-4, 1.1.19, 1.1.24-25, 1.1.85-86

Screen 01 - Schedule Overview

- **Purpose:** View the schedules, timeslots and performances available to ticket products.
 - Present calendar, timeline and list views by venue, attraction, event and product.
 - Show capacity, reservation status, linked products, sales status and operational exceptions.
 - Filter by timezone, date range, schedule template and publication state.
 - Highlight overlaps, gaps, oversubscription and broken associations.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Timeslot Template

- **Purpose:** Create reusable patterns for whole-day and period-based admission slots.
 - Define slot duration, frequency, exact time or flexible entry window.
 - Configure default capacity, reservation requirement and applicable venues or attractions.
 - Set lead time, cutoff, minimum booking interval and publication horizon.
 - Version templates and preview generated occurrences before use.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Calendar & Recurrence

- **Purpose:** Generate recurring timeslots through a clear calendar interface.
 - Specify frequency, weekdays, start/end dates, occurrence count and exception dates.
 - Support daily, weekly, custom and calendar-driven recurrence patterns.
 - Clone, remove or edit a single occurrence, future series or full series.
 - Warn when edits affect sold inventory, reservations or access rights.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Slot Frequency & Windows

- **Purpose:** Control how often slots occur and how guests select them.
 - Support every N minutes, hourly, whole-day and explicitly listed start times.
 - Choose precise entry time or a selectable entry range such as 14:00-16:00.
 - Define booking increment, display label and late-arrival treatment.
 - Preview customer-facing slot choices for each channel and locale.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Entry Buffers & Scan Window

- **Purpose:** Define when a ticket may validate around its scheduled start time.
 - Configure early-entry buffer, late-entry buffer, end-of-day limit and hard close.
 - Apply different buffers by product, guest category, gate, venue or entitlement.
 - Return clear access-control reason codes for early, valid, late and expired scans.
 - Support emergency override without silently changing the underlying rule.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Capacity per Timeslot

- **Purpose:** Associate each occurrence with defined or unlimited capacity.
 - Use fixed, unlimited, shared-pool or derived capacity and show the authoritative source.
 - Define sales, reservation and admission allocations without double counting.
 - Reopen availability automatically after eligible cancellation or refund.
 - Prevent unsafe capacity edits when commitments already exist.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Demand-Based Slot Generation

- **Purpose:** Create or adjust slots using demand signals within governed limits.
 - Define demand thresholds, forecast horizon, operating constraints and minimum staffing inputs.
 - Allow AI to recommend additional, merged or closed slots with explanation and confidence.
 - Require approval for changes that affect published inventory or guest bookings.
 - Measure recommendation outcome against utilization and guest service metrics.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Performance Association

- **Purpose:** Link ticket products to scheduled performances and sessions.
 - Select one, many or rule-matched performances by event, venue, date, time or series.
 - Define seat, zone, access, reservation and validity dependencies for the association.
 - Propagate reschedule or cancellation events into controlled service workflows.
 - Maintain relationship history when a performance or product version changes.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Clone & Bulk Schedule Edit

- **Purpose:** Apply controlled schedule changes across many occurrences.
 - Copy schedules to new dates, venues, attractions or performance series.
 - Bulk-edit capacity, buffers, status, channel visibility and reservation rules.
 - Show proposed changes, affected bookings and conflicts before commit.
 - Support atomic processing, partial-failure reporting and rollback where safe.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

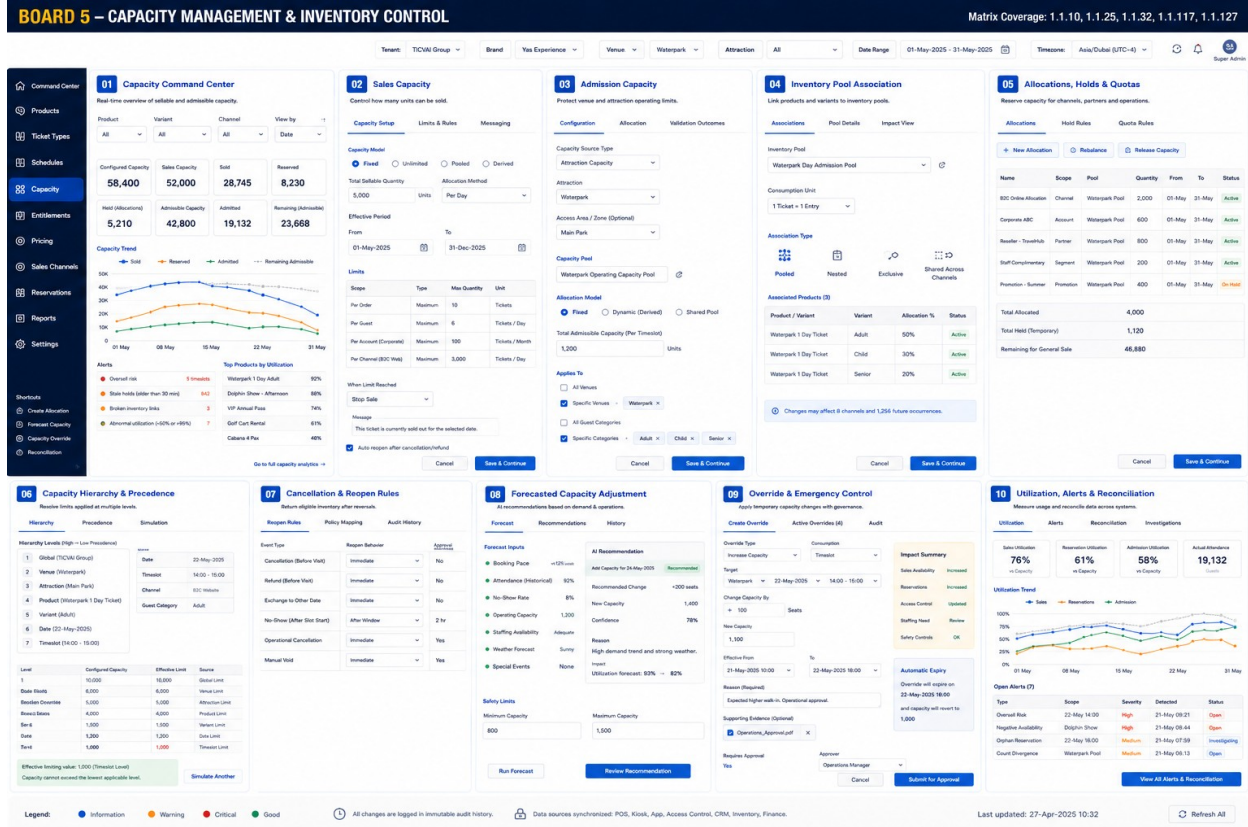

Screen 10 - Reservation & Waitlist Rules

- **Purpose:** Configure reservation-required products and full-capacity recovery.
 - Define when reservation is mandatory, optional, deferred or automatically assigned.
 - Configure waitlist eligibility, priority, offer expiry and notification sequence.
 - Reserve released capacity atomically and prevent duplicate acceptance.
 - Expose reservation and waitlist status consistently to sales, CRM and guest channels.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Board 5 - Capacity & Inventory Association

Figure 5. High-definition configuration board containing all 10 screens.

Board 5 - Scope of Work

Matrix coverage: 1.1.10, 1.1.25, 1.1.32, 1.1.117, 1.1.127

Screen 01 - Capacity Command Center

- **Purpose:** Monitor sellable and admissible capacity linked to ticket products.
 - Show configured, allocated, sold, reserved, held, cancelled, refunded and remaining quantities.
 - Compare sales capacity, reservation capacity and admission capacity without conflating them.
 - Filter by product, variant, venue, attraction, date, timeslot, channel and inventory pool.
 - Alert on oversell risk, stale holds, broken links and abnormal utilization.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Sales Capacity

- **Purpose:** Limit the number of units that may be sold for a ticket product.
 - Configure fixed, unlimited, pooled or derived sales capacity by date and variant.
 - Apply maximum sellable quantity at product, order, guest, account and channel level.
 - Define sale-stop behavior and customer messaging when the limit is reached.
 - Reopen eligible quantity after cancellation, void or refund according to policy.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Admission Capacity

- **Purpose:** Protect venue and attraction operating limits at time of entry.
 - Reference authoritative attraction, zone, venue, event or resource capacity.
 - Allocate capacity by date, timeslot, performance, access area and guest category.
 - Distinguish sold inventory from operational admission constraints.
 - Return clear availability and validation outcomes when admission capacity is constrained.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Inventory Pool Association

- **Purpose:** Link ticket products to shared or dedicated inventory pools.
 - Associate one or more products and variants with a pool and consumption unit.
 - Configure pooled, nested, exclusive and shared-across-channel inventory behavior.
 - Show every consuming product, channel and reservation source before changes are saved.
 - Prevent circular, duplicate or conflicting inventory relationships.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Allocations, Holds & Quotas

- **Purpose:** Reserve capacity for channels, partners, groups and operational needs.
 - Define allocations and quotas by channel, reseller, corporate account, promotion or guest segment.
 - Configure release dates, hold duration, reclaim rules and priority order.
 - Track allocation consumption and allow governed rebalancing between pools.
 - Prevent allocation totals from exceeding safe capacity unless explicitly authorized.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Capacity Hierarchy & Precedence

- **Purpose:** Resolve capacity limits applied at multiple organizational levels.
 - Model limits at global, venue, attraction, product, variant, date and timeslot level.
 - Make precedence and the effective limiting value visible to administrators.
 - Support inherited defaults with explicit override and effective dates.
 - Simulate capacity result for a chosen product and booking context.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Cancellation & Reopen Rules

- **Purpose:** Return eligible inventory after order and booking reversals.
 - Configure reopen behavior by cancellation, refund, exchange, no-show and operational cancellation.
 - Choose immediate, scheduled, approval-based or non-reopening treatment.
 - Reconcile inventory changes atomically with ticket and payment outcomes.
 - Record original consumption, release event, quantity, actor and reason.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Forecasted Capacity Adjustment

- **Purpose:** Use demand and operational forecasts to recommend inventory changes.
 - Combine booking pace, attendance, no-show, resource and operating-capacity signals.
 - Set minimum, maximum and safety thresholds that AI recommendations cannot exceed.
 - Require human review for material changes and retain model/version evidence.
 - Measure forecast accuracy and the operational outcome of accepted adjustments.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Override & Emergency Control

- **Purpose:** Apply temporary capacity changes through a controlled exception path.
 - Restrict override authority using RBAC/PBAC, segregation of duties and maximum limits.
 - Require reason, effective period, affected scope and optional supporting evidence.
 - Show downstream impact on sales, reservations, access, staffing and safety controls.
 - Provide automatic expiry, notification and immutable before/after audit.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

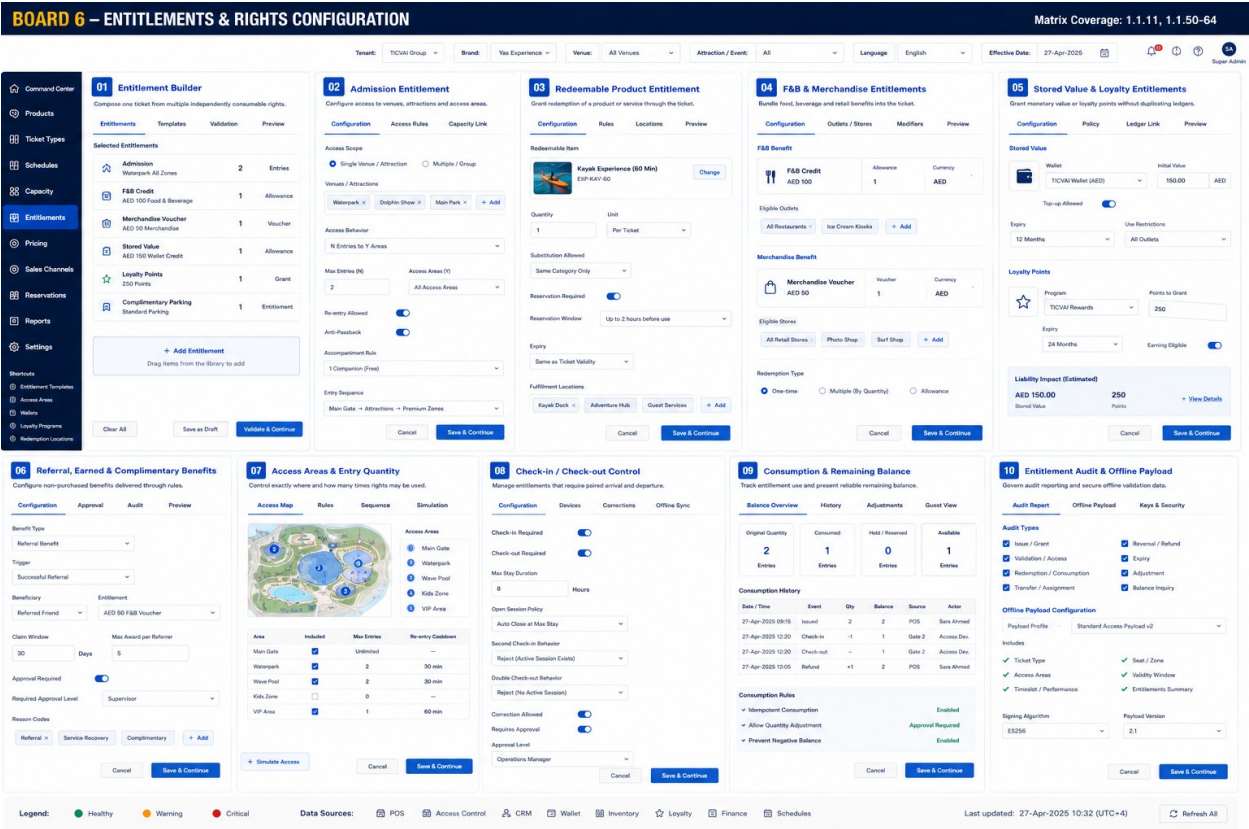

Screen 10 - Utilization, Alerts & Reconciliation

- **Purpose:** Measure capacity use and reconcile discrepancies across services.
 - Report sales, booking, attendance and entitlement utilization against capacity.
 - Detect oversell, undersell, orphan reservations, negative availability and count divergence.
 - Provide investigation drill-down with correlation IDs and source-of-truth values.
 - Support controlled correction actions without rewriting historical transactions.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Board 6 - Entitlements & Access Rights

Figure 6. High-definition configuration board containing all 10 screens.

Board 6 - Scope of Work

Matrix coverage: 1.1.11, 1.1.50-64

Screen 01 - Entitlement Builder

- **Purpose:** Compose one ticket from multiple independently consumable rights.
 - Add admission, redeemable product, F&B, merchandise, stored value, loyalty and benefit entitlements.
 - Define quantity, unit, validity, consumption order, dependency and fulfillment owner.
 - Reuse approved entitlement templates while permitting controlled product-level overrides.
 - Validate incompatible, duplicated or unfulfillable entitlements before publication.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Admission Entitlement

- **Purpose:** Configure access to one or more attractions, venues and access areas.
 - Define N entries to Y areas, once-only, limited-count or unlimited access behavior.
 - Set entry sequence, re-entry, anti-passback, accompaniment and access-area constraints.
 - Reference schedules, validity, seat/zone and admission-capacity rules.
 - Expose remaining entries and next eligible use to guests, staff and access devices.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Redeemable Product Entitlement

- **Purpose:** Grant redemption of a separate product or service through the ticket.
 - Reference approved catalogue item, service, voucher or experience and permitted fulfillment locations.
 - Define quantity, substitution, partial redemption, reservation and expiry behavior.
 - Generate a traceable redemption transaction without creating artificial ticket revenue.
 - Prevent duplicate use through online and offline consumption controls.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - F&B & Merchandise Entitlements

- **Purpose:** Bundle food, beverage and retail benefits into the ticket product.
 - Reference menu items, categories, retail SKUs or value limits maintained by their source modules.
 - Configure inclusions, exclusions, modifiers, substitution and eligible outlets.
 - Support one-time, quantity-based and allowance-based redemption.
 - Send consumption events to inventory, finance and guest history services.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Stored Value & Loyalty Entitlements

- **Purpose:** Grant monetary value or loyalty points without duplicating wallet ledgers.
 - Reference wallet currency, stored-value purse, points program and earning/redemption policy.
 - Configure initial value, top-up eligibility, expiry and use restrictions.
 - Keep wallet and loyalty ledgers authoritative for balance and transaction history.
 - Show linked liability, settlement and refund treatment before publication.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Referral, Earned & Complimentary Benefits

- **Purpose:** Configure non-purchased benefits delivered through referral or operational rules.
 - Define trigger, beneficiary, entitlement, claim window and maximum award quantity.
 - Support earned, referral, service-recovery and complimentary issuance reasons.
 - Require approval or evidence based on benefit value and policy.
 - Track award, issue, redemption, expiry and reversal separately from paid sales.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Access Areas & Entry Quantity

- **Purpose:** Control exactly where and how many times each admission right may be used.
 - Select gates, zones, attractions, venues and logical access groups.
 - Set shared or separate counters, maximum entries and re-entry cooldown.
 - Configure sequence rules such as main gate before premium area.
 - Simulate the effective access outcome for each entitlement and variant.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Check-In / Check-Out Control

- **Purpose:** Manage entitlements that require paired arrival and departure events.
 - Define check-in required, check-out required, maximum stay and open-session handling.
 - Block invalid second check-in or check-out without an active visit.
 - Support authorized correction for missing or duplicate device events.
 - Synchronize offline events and resolve conflicts using event time and device trust rules.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Consumption & Remaining Balance

- **Purpose:** Track entitlement use and present a reliable remaining balance.
 - Record authorization, reservation, consumption, reversal, expiry and manual adjustment events.
 - Show original quantity, consumed amount, held amount and available remainder.
 - Apply idempotency so repeated device or POS messages do not consume twice.
 - Provide guest-safe and staff-detailed views with permission-based information.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 10 - Entitlement Audit & Offline Payload

- **Purpose:** Govern audit reporting and secure offline validation data.
 - Report entitlement issue, transfer, validation, redemption, reversal and remaining balance.
 - Define the minimum signed payload needed for QR, RFID, NFC or digital credentials.
 - Include permitted ticket type, seat, event, access, timeslot and validity claims where required.
 - Protect keys, payload versions, revocation and post-sync reconciliation.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Board 7 - Eligibility, Restrictions & Guest Rules

Board 7 - Scope of Work

Matrix coverage: 1.1.38, 1.1.121-127

Screen 01 - Eligibility Rule Studio

- **Purpose:** Create reusable policies determining who may purchase or use a ticket.
 - Build rules from guest, account, membership, loyalty, location, channel and transaction attributes.
 - Use AND/OR groups, effective dates, priority and explicit deny/allow outcomes.
 - Separate purchase eligibility from admission or redemption eligibility.
 - Version, test, approve and reuse rules across products without copying logic.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Age & Height Eligibility

- **Purpose:** Enforce age and height conditions consistently and respectfully.
 - Configure minimum, maximum and banded criteria with measurement units and boundary handling.
 - Define age-at-purchase, age-on-visit or age-on-first-use calculation date.
 - Specify evidence, guardian and waiver requirements without storing unnecessary data.
 - Return clear, localized failure and staff guidance messages.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Residency, Nationality & Geography

- **Purpose:** Control products intended for defined resident or geographic audiences.
 - Define permitted or excluded country, nationality, emirate/state, city, postal or geofenced region.
 - Specify proof type, verification timing, retention and privacy treatment.
 - Support sales-channel and use-location restrictions as separate controls.
 - Prevent discrimination rules that are not explicitly approved and legally supported.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Membership, Loyalty & Entitlement Eligibility

- **Purpose:** Use existing customer benefits as product eligibility conditions.
 - Reference membership tier/status, loyalty tier, point balance or held entitlement.
 - Define active-on-purchase, active-on-visit or continuously active requirements.
 - Configure benefit consumption or proof without duplicating source records.
 - Handle temporary unavailability of linked services through an explicit fallback policy.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Guest Profile Conditions

- **Purpose:** Apply customer-profile eligibility while respecting consent and minimization.
 - Select approved attributes such as guest category, relationship, organization or verified status.
 - Mask sensitive values and prevent unrestricted free-form personal-data rules.
 - Define missing-data behavior, evidence request and manual review route.
 - Audit every eligibility decision that uses protected or sensitive attributes.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Quantity & Purchase Limits

- **Purpose:** Control how many units may be bought within a defined period and context.
 - Set minimum, maximum and increment by order, guest, account, household, company or payment instrument.
 - Define rolling, daily, event, campaign, membership-term or lifetime limit windows.
 - Aggregate purchases across channels where identity resolution permits.
 - Allow authorized exceptions without resetting the underlying purchase history.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Channel Restrictions

- **Purpose:** Make a ticket available only through approved sales and service channels.
 - Allow or deny web, mobile, POS, kiosk, call center, reseller, OTA and corporate channels.
 - Apply channel-specific lead time, quantity and verification requirements.
 - Distinguish sale, modification, delivery and refund channel permissions.
 - Preview effective availability after product, pricing and channel rules are combined.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Blackouts & Business Restrictions

- **Purpose:** Configure additional business constraints that may block sale or use.
 - Apply date, time, venue, event, inventory, promotion and operational restrictions.
 - Set rule priority and conflict resolution for overlapping restrictions.
 - Provide localized guest messages and staff-only diagnostic reason codes.
 - Require review for restrictions that affect already-published products.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Ownership & Transfer Eligibility

- **Purpose:** Control who may hold, assign or receive a ticket.
 - Define named/anonymous holder rules, assignment deadline and transferee eligibility.
 - Apply identity verification, transfer count, waiting period and fee associations.
 - Preserve purchaser, previous holder and current holder relationships for audit.
 - Prevent transfer when the ticket is consumed, refunded, disputed or otherwise locked.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 10 - Rule Simulation & Exception Review

- **Purpose:** Test eligibility outcomes before rules affect guests.
 - Create scenarios by guest, date, location, channel, quantity and product variant.
 - Show every evaluated condition, input, outcome, priority and failure reason.
 - Route exception requests to authorized reviewers with evidence and expiry.
 - Retain test results and approval evidence with the published rule version.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

TICVAI • Backend Configuration Scope of Work | 30

Board 8 - Scope of Work

Matrix coverage: 1.1.5-7, 1.1.28-31, 1.1.93-120

Screen 01 - Special Product Portfolio

- **Purpose:** Manage group, family, corporate, membership, subscription and stored-value ticket products.
 - Show product family, active terms, linked accounts, holder count, balance model and lifecycle state.
 - Separate product configuration from individual issued membership or wallet records.
 - Filter by venue, organization, billing model, validity, owner and effective date.
 - Highlight expiring terms, invalid associations and lifecycle actions requiring review.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Group Ticket Configuration

- **Purpose:** Configure fixed-quantity and dynamic-quantity group ticket products.
 - Set minimum, maximum and fixed group size, group leader role and pricing reference.
 - Define whether attendees are named at purchase, assigned later or remain anonymous.
 - Calculate capacity by persons, groups or mixed units without double counting.
 - Configure split arrival, partial entry, remaining attendee count and group completion.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Family Ticket Configuration

- **Purpose:** Model family composition and shared entitlements explicitly.
 - Define adult, child, infant, senior and guardian minimum/maximum composition.
 - Apply age eligibility at the configured decision date and require guardian rules where needed.
 - Choose shared, individual or mixed entitlements and capacity consumption.
 - Support family holder changes according to ownership and transfer policy.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Corporate Allocations

- **Purpose:** Create ticket products allocated through corporate accounts.
 - Reference corporate account, contract, price list, quota, billing and approval policy.
 - Allocate products by department, employee, campaign or authorized booker.
 - Track issued, assigned, used, cancelled and remaining corporate quantities.
 - Enforce credit, contract-term, channel and data-sharing controls.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Membership Product Management

- **Purpose:** Configure sellable membership products and their benefits.
 - Define tier, term, holder model, included benefits, access rights and renewal eligibility.
 - Support monthly, annual, season, family and corporate membership products.
 - Reference pricing, billing, wallet, loyalty and access services instead of duplicating them.
 - Preview member experience at purchase, activation, use and renewal.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Membership Lifecycle Rules

- **Purpose:** Govern activation, upgrade, downgrade, suspension and reactivation.
 - Define lifecycle triggers, notice periods, proration reference, benefit treatment and approvals.
 - Preserve earned, consumed and future benefits when a state changes according to policy.
 - Configure renewal grace, lapsed state and reactivation conditions.
 - Maintain an immutable timeline of membership product and holder lifecycle events.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Family & Corporate Memberships

- **Purpose:** Configure multi-holder memberships with account-level governance.
 - Define primary holder, dependants, administrators, seats and relationship requirements.
 - Apply shared or individual benefits, limits and renewal behavior.
 - Support corporate roster imports, invitations, removal and reassignment.
 - Protect personal data while providing the account owner with permitted administration.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Subscription Billing & Renewal Link

- **Purpose:** Associate recurring ticket products with subscription billing.
 - Reference billing cycle, payment mandate, renewal date, retry and dunning policies.
 - Define access during failed payment, grace, pause, cancellation and reinstatement.
 - Keep the Subscription and Finance engines authoritative for invoices and ledger entries.
 - Show the commercial impact of upgrades, downgrades and early renewal before confirmation.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Stored-Value Ticket Product

- **Purpose:** Configure a ticket that also acts as a governed stored-value credential.
 - Reference purse currency, starting balance, top-up, enquiry, deduction and expiry rules.
 - Allow admission-based and POS-based deductions with clear merchant and venue scope.
 - Define refund eligibility and destination without rewriting wallet transactions.
 - Expose balance and transaction history through authorized guest and staff channels.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

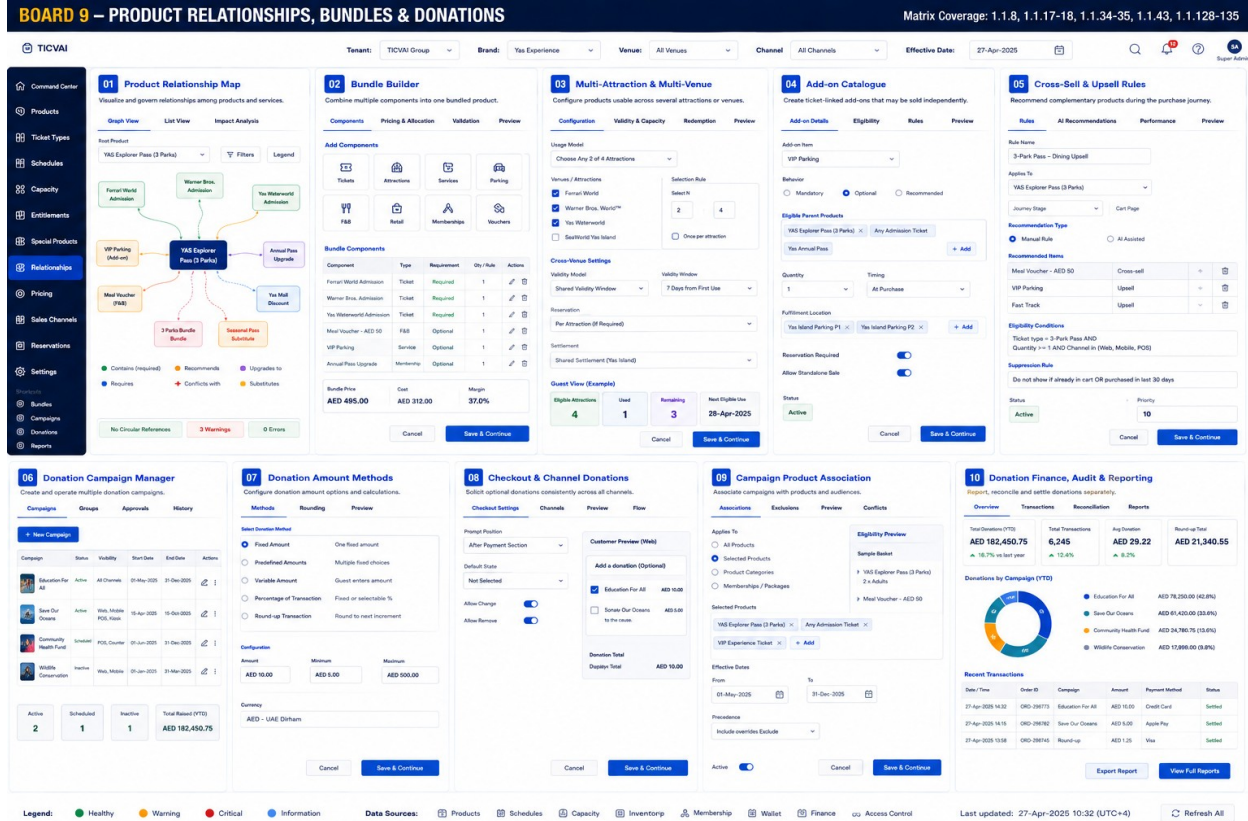

Screen 10 - Attendee Data & Group Entry

- **Purpose:** Collect required attendee information and validate group arrival.
 - Configure extended attendee fields by product, participant role and operational need.
 - Support roster upload, invitations, assignment progress and duplicate detection.
 - Validate whole-group, partial-group and individual entry according to the product rule.
 - Report capacity, attendance and remaining entries at attendee and group level.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Board 9 - Bundles, Add-ons, Donations & Product Relationships

Figure 9. High-definition configuration board containing all 10 screens.

Board 9 - Scope of Work

Matrix coverage: 1.1.8, 1.1.17-18, 1.1.34-35, 1.1.43, 1.1.128-135

Screen 01 - Product Relationship Map

- **Purpose:** Visualize and govern relationships among tickets, services, benefits and campaigns.
 - Show contains, requires, recommends, substitutes, upgrades-to and conflicts-with relationships.
 - Trace dependencies to attractions, venues, F&B, retail, parking, memberships and vouchers.
 - Detect circular references, unavailable components and version mismatches.
 - Provide impact analysis before a related component is changed or retired.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Bundle Builder

- **Purpose:** Combine multiple sellable and entitlement components into one product.
 - Add tickets, attractions, services, parking, F&B, retail, memberships and vouchers.
 - Set required, optional, selectable and quantity-based components.
 - Reference bundle pricing and revenue allocation without creating a parallel pricing engine.
 - Validate capacity, fulfillment, tax, delivery and refund compatibility across components.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Multi-Attraction & Multi-Venue

- **Purpose:** Configure products redeemable across several attractions or venues.
 - Define all-inclusive, choose-N, sequence-based and once-per-location usage models.
 - Apply shared or independent validity, capacity and reservation rules by component.
 - Set cross-venue redemption, settlement and legal-entity associations.
 - Show remaining eligible attractions and redemption conditions to guest and staff.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Add-on Catalogue

- **Purpose:** Configure ticket-linked add-ons that may also be sold independently.
 - Reference approved products or services and define mandatory, optional or recommended behavior.
 - Set eligible parent products, quantities, timing, fulfillment location and reservation need.
 - Allow standalone sale only when the referenced item and channel permit it.
 - Prevent add-ons whose validity, capacity or fulfillment conflicts with the parent ticket.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Cross-Sell & Upsell Rules

- **Purpose:** Present relevant complementary products during the purchase journey.
 - Configure manual and AI-assisted recommendations by product, guest, channel and journey stage.
 - Set eligibility, inventory, price, suppression and frequency controls.
 - Require explanation and confidence for AI-ranked upgrades or bundles.
 - Measure impression, acceptance, revenue and guest outcome without forcing purchase.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Donation Campaign Manager

- **Purpose:** Create and operate multiple concurrent donation campaigns.
 - Configure campaign name, description, cause, imagery, messages and validity dates.
 - Control visibility by tenant, site, channel, product, category, membership or package.
 - Activate or deactivate campaigns without downtime while preserving transaction history.
 - Support campaign grouping, responsible owner and approval workflow.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Donation Amount Methods

- **Purpose:** Configure fixed, variable, percentage and round-up donation choices.
 - Support one fixed amount, predefined values and customer-entered amount with minimum/maximum.
 - Configure fixed or selectable transaction percentages such as 3%, 5% or 10%.
 - Round the transaction to an approved increment and calculate the donation difference.
 - Preview currency, rounding and final basket calculations before publication.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Checkout & Channel Donations

- **Purpose:** Solicit optional donations consistently across all sales channels.
 - Configure prompt position, default state, review step and remove/change behavior.
 - Allow one or more eligible campaigns in the same basket and allocate amounts by cause.
 - Support counter POS, kiosk, web, mobile POS, partners and corporate booking.
 - Display donations separately from purchased products and never make them implicitly mandatory.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Campaign Product Association

- **Purpose:** Associate donation campaigns with the correct products and audiences.
 - Apply to all products, selected products, categories, ticket types, memberships or packages.
 - Define inclusion/exclusion precedence and effective dates.
 - Preview eligible campaigns for representative baskets and channels.
 - Warn when an association creates duplicate or conflicting checkout prompts.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 10 - Donation Finance, Audit & Reporting

- **Purpose:** Separate donation collection from ticket revenue and reconcile it fully.
 - Reference accounting classification, tax treatment, settlement and beneficiary configuration.
 - Show donation separately on basket, receipt, transaction and reconciliation records.
 - Report by campaign, site, product, channel, date, cashier, payment method and settlement status.
 - Provide conversion, average donation, round-up, percentage and trend dashboards with audit drill-down.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Data Sources: Products Pricing Membership Finance Access Control CRM Schedules

Last updated: 27-Apr-2025 10:32 (UTC+4) Refresh All

Board 10 - Scope of Work

Matrix coverage: 1.1.19-23, 1.1.27, 1.1.96-100, 1.1.113

Screen 01 - Ticket Service Policy Hub

- **Purpose:** Manage the post-purchase changes permitted for each ticket product.
 - Show reschedule, exchange, upgrade, downgrade, conversion, transfer and refund eligibility.
 - Reference policy owner, version, effective dates, channels and affected products.
 - Distinguish guest self-service, agent-assisted and manager-only actions.
 - Prevent policy edits from silently changing completed or in-progress service cases.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Reschedule Rules

- **Purpose:** Allow visit-date or timeslot changes within availability and policy constraints.
 - Define allowed window, number of changes, blackout periods, capacity and reservation checks.
 - Reference change fee, price difference, tax and waiver policy.
 - Control whether entitlements, media and access payload are regenerated.
 - Provide atomic confirmation so the old booking is released only when the new one succeeds.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Exchange Rules

- **Purpose:** Exchange a ticket for another ticket type, date, timeslot or experience.
 - Define permitted source and target product relationships and eligible lifecycle states.
 - Revalidate guest eligibility, capacity, entitlements and channel conditions.
 - Calculate referenced fees, price differences and refund/collection outcome.
 - Maintain traceability from original ticket to replacement and invalidate superseded media.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Upgrade Rules

- **Purpose:** Move a guest to a higher-value ticket or experience.
 - Configure eligible upgrade targets before or after purchase and before or after first use.
 - Reference automatic price-difference, fee and promotion treatment.
 - Preserve consumed entitlements and grant only the approved incremental benefit.
 - Offer AI recommendations only when inventory, eligibility and guest consent allow.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Downgrade Rules

- **Purpose:** Allow lower-value replacement under controlled refund and approval policy.
 - Define permitted targets, timing, consumed-benefit restrictions and approval threshold.
 - Reference refundable difference, non-refundable fees and credit options.
 - Prevent downgrade when the target cannot represent already-consumed rights.
 - Provide clear guest disclosure and staff explanation before confirmation.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Convert to Membership or Pass

- **Purpose:** Convert eligible ticket value and rights into a longer-term product.
 - Define eligible source tickets, target memberships/passes and conversion deadline.
 - Reference credit value, fees, proration, activation and renewal terms.
 - Map consumed and remaining entitlements without duplicate benefit issuance.
 - Create the membership through the shared lifecycle service and link source evidence.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Ownership Transfer

- **Purpose:** Transfer a ticket between guests according to configured policy.
 - Define transfer count, timing, eligible recipient, identity checks, fee and channel.
 - Block consumed, refunded, disputed, suspended or restricted tickets.
 - Revoke prior wallet/media credentials and issue replacement credentials securely.
 - Preserve purchaser, previous holder, recipient, consent and notification audit.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Fees & Price Difference Association

- **Purpose:** Apply authoritative commercial calculations to modification actions.
 - Reference pricing, fee, tax, promotion and currency policies by action and context.
 - Show old value, new value, fees, tax, refund/collection and rounding before confirmation.
 - Prevent administrators from embedding ungoverned monetary formulas in ticket rules.
 - Record calculation version and inputs with the completed modification.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Approval & Exception Workflow

- **Purpose:** Route high-risk or out-of-policy changes for review.
 - Set approval level by value, reason, product, channel, guest type and policy deviation.
 - Support comments, delegation, evidence, SLA and escalation.
 - Prevent the requestor from approving their own restricted exception.
 - Expire approvals when price, capacity or policy inputs change materially.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 10 - Guest Self-Service Preview

- **Purpose:** Configure and preview the customer journey for permitted ticket changes.
 - Show eligibility, available options, fees, differences, terms and final impact before consent.
 - Support accessible web and mobile journeys with localized messages and recovery states.
 - Require step-up authentication for sensitive ownership or payment changes.
 - Provide confirmation, updated ticket delivery and complete service history.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Board 11 - Media, Pricing, Promotion & Channel Associations

Publish the product through approved sales channels.

06 Ticket Media Profile
Associate the product with permitted ticket media.

07 Wallet & Digital Pass Association
Configure delivery to mobile wallets and digital passes.

08 Physical Media & Wearables
Associate printable and wearable credential options.

09 Distribution & Delivery Rules
Control how the customer receives the issued ticket.

10 Association Impact Preview
Simulate and validate the combined interpretation before publish.

Data Sources: Pricing Tax Finance Promotions Channels Inventory Ticket Media Membership

Last updated: 27-Apr-2025 10:32 (UTC+4) Refresh All

Board 11 - Scope of Work

Matrix coverage: 1.1.15-16, 1.1.37, 1.1.39 plus related Ticket Media requirements

Screen 01 - Association Overview

- **Purpose:** Show every external policy and service referenced by the ticket product.
 - Display pricing, tax, fee, promotion, channel, media, delivery and finance associations.
 - Show authoritative owner, version, effective dates, status and dependency health.
 - Highlight missing, expired, conflicting or unpublished associations.
 - Open linked configuration in context without duplicating it inside the product record.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Pricing Profile Link

- **Purpose:** Associate products and variants with approved price structures.
 - Reference base, tiered, dynamic, group, corporate, membership and channel price profiles.
 - Map variant and date/timeslot dimensions to price lookup inputs.
 - Define fallback or no-sale behavior when no valid price is returned.
 - Preview calculated price while keeping the Pricing engine authoritative.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Tax, Fee & Finance Links

- **Purpose:** Connect the product to financial classification and charge policies.
 - Reference tax code, service-charge policy, revenue account, cost center and legal entity.
 - Configure revenue-recognition and allocation references for bundles and multi-entity products.
 - Identify donation and stored-value liability treatment separately from ticket revenue.
 - Block publication when mandatory financial associations are missing or invalid.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Promotion & Discount Link

- **Purpose:** Control which promotion policies may apply to a ticket product.
 - Associate promotion groups, coupon eligibility, loyalty benefits and exclusion policies.
 - Define stackability, priority and product/variant scope through references.
 - Preview effective eligibility without embedding promotional calculations in the ticket product.
 - Show active and scheduled promotions that may affect the product.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Sales Channel Availability

- **Purpose:** Publish products only through approved sales and service channels.
 - Configure availability for web, mobile, POS, kiosk, call center, B2B, reseller and OTA.
 - Set sale start/end, lead time, cutoff, quantity and content requirements per channel.
 - Support channel-specific identifiers while preserving one canonical product.
 - Prevent publication when required media, price, tax or inventory is unavailable.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Ticket Media Profile

- **Purpose:** Associate each product with permitted digital and physical ticket media.
 - Reference paper/thermal, print-at-home, QR, barcode, RFID, NFC, badge and wearable profiles.
 - Select primary, fallback and reissue media by channel, venue, product and guest context.
 - Configure whether price, holder data, photo or operational instructions are displayed.
 - Keep layout, encoding and credential security inside the shared Ticket Media engine.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - Wallet & Digital Pass Association

- **Purpose:** Configure delivery to guest app and supported mobile wallets.
 - Reference Apple Wallet, Google Wallet, Samsung Wallet and TICVAI digital-wallet templates.
 - Map product, performance, seat, validity, entitlement and update fields.
 - Define update, revocation, reissue, notification and offline-validation behavior.
 - Preview each wallet pass and validate required certificates and identifiers.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - Physical Media & Wearables

- **Purpose:** Associate products with printable, encoded and wearable credentials.
 - Support thermal paper, print-at-home, plastic badges and RFID wristbands or custom wearables.
 - Reference printer/encoder profile, stock, theme, artwork and personalization rules.
 - Configure QR, barcode, RFID, photo and visible-price behavior per template.
 - Provide on-screen virtual ticket preview and reprint/reissue controls with audit.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - Distribution & Delivery Rules

- **Purpose:** Control how the customer receives the issued ticket.
 - Configure app, wallet, email, SMS/WhatsApp link, print, collection and partner delivery.
 - Define delivery timing, retry, fallback, language, consent and notification template.
 - Prevent insecure delivery of named or high-value credentials.
 - Trace generation, delivery, update, failure, reissue and revocation events.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

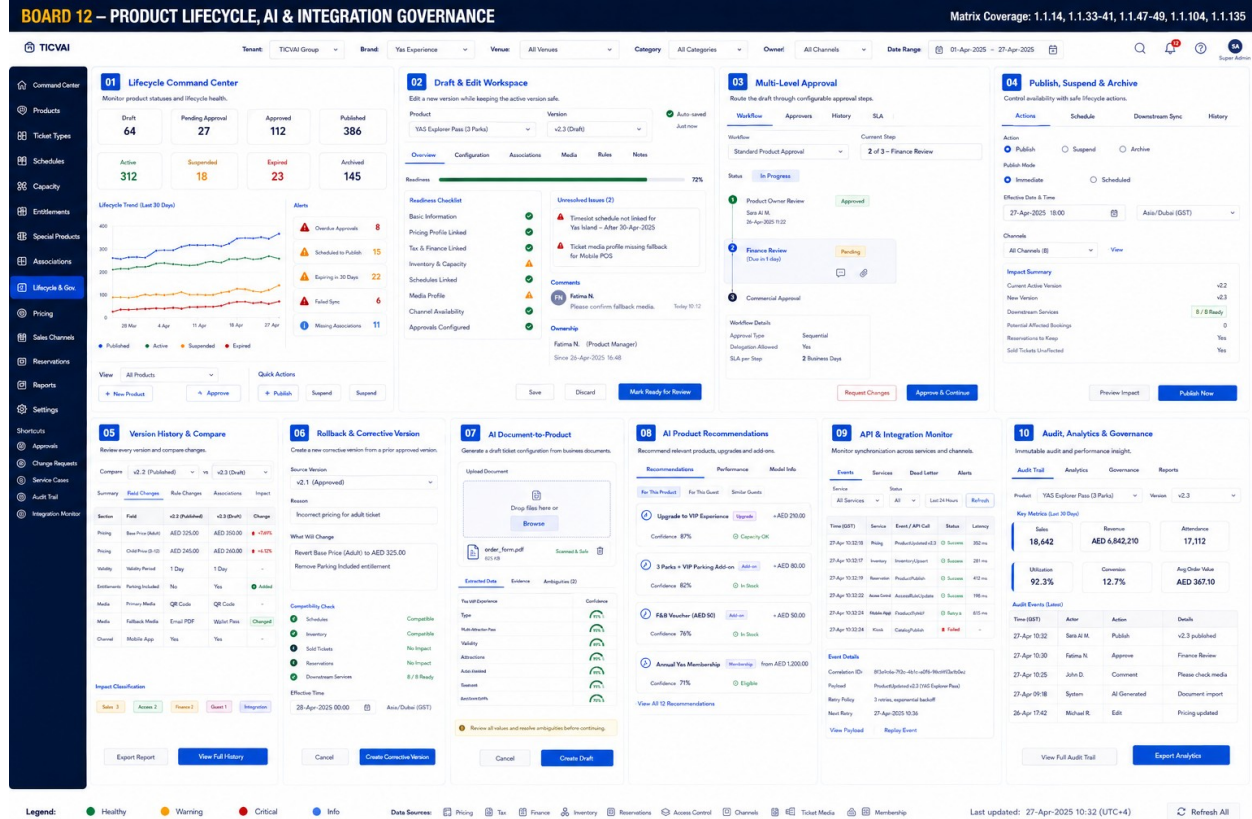

Screen 10 - Association Impact Preview

- **Purpose:** Validate the combined commercial and delivery interpretation before publish.
 - Simulate guest, channel, date, venue, variant, quantity and currency scenarios.
 - Show price, tax, fees, promotion, media, delivery and channel availability together.
 - Identify conflicts and display the authoritative source for each resolved value.
 - Store the successful preflight result with the approved product version.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Board 12 - Product Lifecycle, Workflow, Versioning, AI & Audit

Figure 12. High-definition configuration board containing all 10 screens.

Board 12 - Scope of Work

Matrix coverage: 1.1.14, 1.1.33-41, 1.1.47-49, 1.1.104, 1.1.135

Screen 01 - Lifecycle Command Center

- **Purpose:** Monitor products across draft, approval, publication, suspension, expiry and archive.
 - Show counts and trends for Draft, Pending Approval, Approved, Published, Active, Suspended, Expired and Archived.
 - Highlight overdue approvals, scheduled publications, expiring products and failed downstream synchronization.
 - Filter by tenant, owner, venue, category, risk, channel and effective date.
 - Provide governed actions appropriate to the current state and user authority.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 02 - Draft & Edit Workspace

- **Purpose:** Edit a new version without disturbing the currently active product.
 - Create a working draft from the active version and lock or merge concurrent edits safely.
 - Show unresolved validation errors, comments, dependencies and change ownership.
 - Auto-save with recoverable history and explicit readiness checklist.
 - Protect sold-ticket interpretation by making changes effective only through version publication.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 03 - Multi-Level Approval

- **Purpose:** Route product changes through configurable review and approval hierarchies.
 - Configure reviewers by product, value, risk, venue, region, legal entity and changed area.
 - Support sequential or parallel steps, delegation, SLA, comments and evidence.
 - Apply segregation of duties and prevent self-approval where policy requires.
 - Reopen approval when a material field changes after review.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 04 - Publish, Suspend & Archive

- **Purpose:** Control product availability without invalidating legitimate historical rights.
 - Publish immediately or schedule by timezone, channel and effective period.
 - Suspend future sales while defining treatment of existing reservations and sold tickets.
 - Archive inactive configuration without deletion and retain searchable history.
 - Execute publication through idempotent downstream events with retry and reconciliation.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 05 - Version History & Compare

- **Purpose:** Understand every product version and the business impact of its changes.
 - Show version, author, approver, dates, status, reason and source of change.
 - Compare field-level, rule-level and association-level differences side by side.
 - Classify changes by sales, access, finance, guest and integration impact.
 - Export an approved human-readable change record for implementation review.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 06 - Rollback & Corrective Version

- **Purpose:** Recover safely from a defective product configuration.
 - Create a new corrective version from a previously approved version rather than rewriting history.
 - Show incompatibilities caused by current schedules, prices, inventory or sold tickets.
 - Require approval and defined effective time for production rollback.
 - Reconcile downstream services and record completion or partial failure.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 07 - AI Document-to-Product

- **Purpose:** Generate reviewable ticket configuration drafts from approved business documents.
 - Accept PDFs, brochures, spreadsheets and price lists with malware and access controls.
 - Extract candidate product, price reference, capacity, timeslot, validity, rule and add-on data.
 - Show source evidence, confidence and unresolved ambiguity for every generated value.
 - Require human validation and approval; AI output may never publish autonomously.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 08 - AI Product Recommendations

- **Purpose:** Recommend products, upgrades, bundles and add-ons using governed intelligence.
 - Use eligible guest, behavior, purchase, product and availability signals under consent rules.
 - Explain recommendation factors, confidence and any suppressed option.
 - Apply capacity, pricing, entitlement, channel and fairness guardrails before presentation.
 - Track acceptance, guest value, revenue and complaint outcomes by model version.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 09 - API & Integration Monitor

- **Purpose:** Monitor product synchronization across platform and third-party services.
 - Trace versioned API calls and events for pricing, inventory, reservation, validation and channel publication.
 - Show correlation ID, status, latency, retry, error and reconciliation state.
 - Support safe replay and dead-letter handling with authorization and idempotency.
 - Alert on schema incompatibility, stale subscribers and repeated downstream failures.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.

Screen 10 - Audit, Analytics & Governance

- **Purpose:** Provide immutable evidence and performance insight for the Ticket Product Engine.
 - Audit configuration, approval, publication, AI output, override, export and sensitive access.
 - Report sales, attendance, utilization, conversion, capacity and revenue by product and version.
 - Support controlled drill-down, saved views, export and data-retention policy.
 - Record actor, timestamp, context, before/after value, reason, model/version and correlation ID.

Acceptance condition: Authorized users can complete the task end to end; saved changes are validated, permission-controlled, integrated with the named shared services and traceable in immutable audit history.
